## **Telecommunications Network Planning:**

Telecommunications Network Planning Brunilde Sansò, Patrick Soriano, 2012-12-06 Telecommunications central to our daily lives continues to change dramatically. These changes are the result of technological advances, deregulation, the proliferation of broadband service offers, and the spectacular popularity of the Internet and wireless services. In such a dynamic technological and economic environment, competition is increasing among service providers and among equipment manufacturers. Consequently, optimization of the planning process is becoming essential. Although telecommunications network planning has been tackled by the Operations Research community for some time, many fundamental problems remain challenging. Through its fourteen chapters, this book covers some new and some still challenging older problems which arise in the planning of telecommunication networks. Telecommunications Network Planning will benefit both telecommunications practitioners looking for efficient methods to solve their problems and operations researchers interested in telecommunications. The book examines network design and dimensioning problems, it explores Operations Research issues related to a new standard Asynchronous Transfer Mode (ATM), it overviews problems that arise when designing survivable SDH/SONET Networks, it considers some broadband network problems, and it concludes with three chapters on wireless and mobile networks. Leading area researchers have contributed their recent research on the telecommunications and network topics treated in the volume.

Planning Telecommunication Networks Thomas G. Robertazzi, 1999 The ever growing number of new telecommunications technologies along with the rapid growth of data networks and cable television systems has created a demand for sound network planning. In one concise volume, this book offers professionals in telecommunications and networking and graduate students an introduction to the theory underlying the interdisciplinary field of network planning, a critical aspect of network management that integrates planning telecommunications and data networks. In PLANNING TELECOMMUNICATIONS NETWORKS, you will learn about the mathematical theory behind network planning, including an accessible treatment of linear programming and graph algorithms. Other featured topics cover Reliability theory for network planning, Recent software advances in databases, expert systems, object oriented programming, data mining, and data visualization. Latest developments in new optimization techniques such as tabu search, simulated annealing, genetic algorithms, and neural networks. Complete with homework problems, this text offers you a broad overview of network planning to begin your exploration of this emerging field. Sponsored by IEEE Communications Society. An Instructor's Manual presenting detailed solutions to all the problems in the book is available upon request from the Wiley Marketing Department.
