Stockman,1997-10-31 Information systems for very large applications present problems of scale which generate the need for particular software design techniques The system used by BT for its customer services is usable as a paradigm for any user operating with a large and complex client base This book will cover some of the more important systems currently deployed by BT to manage its multi million customer network the architecture that guides these systems the evolving technology from which they are built and the future directions in their evolution Computing Systems for Global Telecommunications is essential reading for software engineers working on all types of large Operational Support Systems systems designers working for telecommunications providers advanced undergraduate and postgraduate students and researchers studying software engineering Wireline Carrier Billing Systems in Telecommunications Daniel Baker,Stanley Klein,1996-06-01 **Software Architecture** Jan Bosch,Morven

Gentleman,Christine Hofmeister,Juha Kuusela,2002-07-31 For more and more systems software has moved from a peripheral to a central role replacing mechanical parts and hardware and giving the product a competitive edge Consequences of this trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/IFIP Conference on Software Architecture WICSA3 That it is already the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software development and in software engineering research However becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions On the contrary one can identify a

number of interesting trends within software architecture research The first trend is that the role of the software architecture in all phases of software development is more explicitly recognized Whereas initially software architecture was primarily associated with the architecture design phase we now see that the software architecture is treated explicitly during development product derivation in software product lines at run time and during system evolution Software architecture as an artifact has been decoupled from a particular lifecycle phase
