Schafer, 2013-12-26

Unevenly distributed resources and rising costs have become enduring problems in the American health care system. Health care is more expensive in the United States than in other wealthy nations and access varies significantly across space and social classes. James A. Schafer Jr shows that these problems are not inevitable features of modern medicine but instead reflect the informal organization of health care in a free market system in which profit and demand rather than social welfare and public health needs direct the distribution and cost of crucial resources. *The Business of Private Medical Practice* is a case study of how market forces influenced the office locations and career paths of doctors in one early twentieth century city, Philadelphia, the birthplace of American medicine. Without financial incentives to locate in poor neighborhoods, Philadelphia doctors instead clustered in central business districts and wealthy suburbs. In order to differentiate their services in a competitive marketplace, they also began to limit their practices to particular specialties, thereby further restricting access to primary care. Such trends worsened with ongoing urbanization. Illustrated with numerous maps of the Philadelphia neighborhoods, he studies Schafer's work helps underscore the role of economic self interest in shaping the geography of private medical practice and the growth of medical specialization in the United States. *NIH Guide for Grants and Contracts* National Institutes of Health (U.S.), 1992 [NIH Guide for Grants and Contracts](#), 1992 **Lippincott**

Morrison, 2014-08-12 The Association of Child Neurology Nurses has developed a collection of Child Neurology Encounter Guides for common neurology conditions. The topics include epilepsy, alteration of consciousness, paroxysmal involuntary movements, headache, post concussion, tic disorders, developmental delay, and intellectual disability. The guides easily lead registered nurses, doctors of nursing practice, nurse practitioners, clinical nurse specialists, physician assistants, rotating medical students, and residents through an in person or electronic child neurology encounter. This three part toolkit with educational topic overviews, quick reference pocket guides, and data collection tools is ideal for educational training, protocol development, and quality management. Whether implemented in a private managed care or tertiary level practice, the Child Neurology Encounter Guides can enhance patient evaluation and management efficiency, maximize the child neurology provider's time, and provide patients with access to real time health care interventions. **Teleneurology** Richard Wootton, Victor Patterson, 2005-04-12 Teleneurology refers to the use of telecommunications techniques such as the telephone, Internet, email, and videoconferencing to improve the delivery of neurology services. Containing 15 contributions from international clinicians, this volume provides an introduction to telemedicine as it is practiced in neurology today. It is divided into three sections: techniques, applications, and practical issues. Technical information has been kept to a minimum as the emphasis is on the utility of each technique rather than the technology itself.
