Environmental Economics & the Mining Industry Wade E. Martin, 2012-12-06 Superfund liability This is an issue that is currently having a dramatic impact on the industry The impact is being felt in transactions involving the potential sale of properties insuring operations development of new properties joint ventures or more generally practically every phase of the mining firm's operation The second issue focuses on an environmental topic that has not been specifically addressed in federal legislation although it has been indirectly considered that is global warming or the greenhouse effect One of the interesting aspects to this environmental problem is the uncertainty associated with it at every phase of the analysis The predictions of the general circulation models of climatologists are questioned due to the uncertainty of ocean effects urbanization etc see Burness Martin Chapter 5 The economic models are criticized for the uncertainty associated with the benefit estimates from reducing greenhouse gases particularly carbon dioxide CO₂ concentrations in the atmosphere as well as estimates of the cost of reducing GHG concentrations and or emissions This

raises the interesting question of what is the optimal policy and what will be the impact of this policy s on the mining sector given the uncertainty The first of these two topics is addressed by V Kerry Smith and Ronald G Cummings et al Professors Smith and Cummings were chosen due to their pioneering work in the area of valuation of nonmarket goods particularly involving the use of survey methods

Heathcote,2016-05-13 Drought has been a long companion in the human story Mythologised as the devastating Bull of Heaven in one of the earliest heroic legends to come out of Mesopotamia drought has continued to wreak havoc upon societies in many cases playing a significant role in their final demise For societies in the 21st Century drought hovers on all horizons the ultimate drought proofing of society long sought remains elusive This study of the human conceptualization of drought in a global setting examines the historical record from early human society through to present day concerns to explore how and why attitudes to drought have changed and why the mitigation of its impacts has become more difficult To offer a more lasting strategy for protection against drought the author argues that physical scientists need to combine their skills in understanding global ecology and their technological expertise with the social scientists awareness of the socio economic political and cultural contexts in which modern societies operate Both will have to ensure that their cooperative strategies for drought management will be understood and supported by the public If this cooperation can be achieved the future rampages of the Bull of Heaven may be contained

Ffolliott,2012 Hydrologic processes in the pinyon juniper woodlands of the western region of the United States are variable because of the inherent interactions among the occurring precipitation regimes geomorphological settings and edaphic conditions that characterize the ecosystem A wide range of past and present land use practices further complicates comprehensive evaluations of these hydrologic processes Heterogeneous vegetative covers make it even more difficult to generalize hydrologic processes and the effects of land management practices on the water balance Nevertheless estimates of interception infiltration evapotranspiration soil moisture storage and hillslope soil erosion of these on site hydrologic processes have been obtained in plot studies Estimates of off site streamflow volumes sediment yields and transport and quality of streamflow water are available from the results of watershed level investigations Estimates of these respective hydrologic processes are presented in this general technical report
