Seelig, 1978      *Outlaw Territories* Felicity D. Scott, 2016-04-15 Revisiting an era when the discipline of architecture staked out a role in global environmental governance and the biopolitical management of populations In *Outlaw Territories* Felicity Scott traces the relation of architecture and urbanism to human unsettlement and territorial insecurity during the 1960s and 1970s Investigating a set of responses to the growing urban unrest in the developed and developing worlds Scott revisits an era when the discipline of architecture staked out a role in global environmental governance and the biopolitical management of populations She describes architecture s response to the displacement of persons brought on by migration urbanization environmental catastrophe and warfare and she traces architecture s relationship to the material environmental psychological and geopolitical transformations brought on by postindustrial technologies and neoliberal capitalism after World War II At the height of the U S led war in Vietnam and Cambodia with ongoing decolonization struggles in many parts of the world architecture not only emerged as a target of political agitation because of its inherent normativity but also became heavily enmeshed with military legal and humanitarian apparatuses participating in scientific and technological research dedicated to questions of international management and security Once architecture became aligned with a global matrix of forces concerned with the environment economic development migration genocide and war its role shifted at times toward providing strategic expertise for institutions born of neoliberal capitalism Scott investigates this nexus and questions how and to what ends architecture and the environment came to be intimately connected to the expanded exercise of power within the shifting geopolitical frameworks at this time

Community Architecture (Routledge Revivals) Nick Wates, Charles Knevitt, 2013-09-05 First published in 1987 this title was one of the first to explore the emerging popular movement of Community Architecture championed by Prince Charles which gained momentum throughout Britain in the 1970s and 1980s The conceptual framework rests fundamentally on the principle that the built environment is most effective when those who live in a particular area are actively engaged with its creation and daily administration A work that has influenced policy makers and planning legislation Community Architecture remains one of the key reference works for student architects and planners      **The Theory of Architecture** Paul-Alan Johnson, 1994-04-18 *The Theory of Architecture Concepts Themes Practices* Paul Alan Johnson Although it has long been thought that theory directs architectural practice no one has explained precisely how the connection between theory and practice is supposed to work This guide asserts that architectural theory does not direct practice but is itself a form of

reflective practice Paul Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation Nearly 100 major concepts themes and practices of architecture as well as the rhetoric of architects and designers are presented in an easily accessible format Throughout Johnson attempts to reduce each architectural notion into its essential concept By doing so he makes theory accessible for everyday professional discussion Topics are arranged under ten headings identification definition power attitudes ethics order authority governance relationship and expression Areas covered under these headings include Utopian thought in theories of architecture Advocacy and citizen participation in architecture The basis of architectural quality and excellence The roles of the architect as artist poet scientist and technologist Ethical obligations of architecture Rationales for models and methods of design How authority is determined in architecture How architects structure their concepts Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed along with a summary history of the topic's use in architecture Discussions probe the conceptual and philosophical difficulties of different theories as well as their potential and limitations in past and present usage Among the provocative issues discussed in terms of their relationship to architecture are chaos theory feminism service to the community and the use of metaphor Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts All architects and designers as well as students and teachers in these disciplines will gain many insights about architectural thought in this groundbreaking text

**Self-help Housing, the Poor, and the State in the Caribbean** Robert B. Potter, Dennis Conway, 1997 This collection of essays represents the first in depth scholarly treatment of housing policies and conditions throughout the Caribbean The contributors consider both the performance of the state and the autonomous activities of the poor making this volume an invaluable contribution to future planning and debate The essays each dealing with a specific island or group of islands collectively address four main themes the history of housing provision since colonization current housing conditions state

policies toward housing provision and the changing relationships between governments international funding agencies the private housing sector and the peoples responses These investigations not only highlight the often alarming problems that Caribbean nations face in providing adequate housing for the poor but also implicate governments in past and present failures and poor performances However the essays are also filled with useful insights about the ways in which progressive housing policies can be formulated and implemented For example the volume suggests that the Caribbean s rich heritage of folk and vernacular architectural styles should be taken into serious account in future planning efforts In a concluding synthesis chapter the volume editors argue that a more progressive future is attainable if all parties exhibit the political will that the poor have already demonstrated

**Understanding Emergent Urbanism** Sotir Dharmo, 2021-08-31 The ideas presented in this book are a conceptual leverage to correct the rigidity of top down practices and bring the real city or the city of everyday life closer to the city of conventional planning Considering self organization as the starting point at the base of complex systems this book tries to understand how specific qualities emerge and evolve from this behavior For this the book discusses new ways of looking at and understanding cities by applying holistic methods and approaches based on the conceptual grounds of quantum fractal and complexity theories The book highlights the fact that the information on how to transform and build a city is contained within the city itself In this regard some methodological steps to unpack complexities and translate the essential qualities of space into potential generators for city design and planning are provided The book urges courageous experimentation and proposes a methodology where the computational nature of urban phenomena goes along with historic anthropological ideas thus emphasizing the characteristics of a specific reality in a model They do not exclude each other in fact they are part of the unbroken web of wholeness Importantly the proposed methodology supports gradual and natural coevolution process in the city through combining planned and unplanned actions and the involving multiplicity of actors impacting on Urban Planning and Design Practice

**When Architecture Meets Activism** Roger Guy, 2016-11-22 This social history and community study documents the events surrounding the attempt by community members activists and VISTA architects to resist the planned construction of a community college in the neighborhood of Uptown The planner and architect are seldom envisioned as advocates for the urban poor However during the 1960s New Left planners and architects began working with marginalized groups in cities to design alternatives to urban renewal projects This was part of a national advocacy planning movement that was taking shape in urban areas like Chicago Inspired by critics of the Rational comprehensive model of planning advocacy planners opposed the imposition of projects on neighborhoods often with no collaboration from residents One example of this resistance was Hank Williams Village a multi purpose housing and commercial redevelopment project modeled after a southern town The Village was an attempt to prevent the displacement of thousands of southern whites by the planned construction of a community college in Chicago s Uptown neighborhood While the plan for the Village failed to win support of the local urban renewal board the work

performed by the young VISTA architects became instrumental in their subsequent career trajectories and thus served as formative personal and professional experience
