Technological Change And The Environment:

Technological Change and the Environment Arnulf Grübler, 2002-10-16 Much is written in the popular literature about the current pace of technological change But do we have enough scientific knowledge about the sources and management of innovation to properly inform policymaking in technology dependent domains such as energy and the environment While it is agreed that technological change does not fall from heaven like autumn leaves the theory data and models are deficient The specific mechanisms that govern the rate and direction of inventive activity the drivers and scope for incremental improvements that occur during technology diffusion and the spillover effects that cross fertilize technological innovations remain poorly understood In a work that will interest serious readers of history policy and economics the editors and their distinguished contributors offer a unique single volume overview of the theoretical and empirical work on technological change Beginning with a survey of existing research they provide analysis and case studies in contexts such as medicine agriculture and power generation paying particular attention to what technological change means for efficiency productivity and reduced environmental impacts The book includes a historical analysis of technological change an examination of the overall direction of technological change and general theories about the sources of change The contributors empirically test hypotheses of induced innovation and theories of institutional innovation They propose ways to model induced technological change and evaluate its impact and they consider issues such as uncertainty in technology returns technology crossover effects and clustering A copublication of Resources for the Future RFF and the International Institute for Applied Systems Analysis IIASA

returns technology crossover effects and clustering A copublication of Resources for the Future RFF and the International Institute for Applied Systems Analysis IIASA *Technological Change and the Environment* Adam B. Jaffe, Richard G. Newell, Robert N. Stavins, 2000 Environmental policy discussions increasingly focus on issues related to technological change This is partly because the environmental consequences of social activity are frequently affected by the rate and direction of technological change and partly because environmental policy interventions can themselves create constraints and incentives that have significant effects on the path of technological progress This paper prepared as a chapter draft for the forthcoming Handbook of Environmental Economics North Holland Elsevier Science summarizes for environmental economists current thinking on technological change in the broader economics literature surveys the growing economic literature on the interaction between technology and the environment and explores the normative implications of these analyses We begin with a brief overview of the economics of technological change and then examine three important areas where technology and the environment intersect the theory and empirical evidence of induced innovation and the related literature on the effects of environmental policy on the creation of new environmentally friendly technology the theory and empirics of environmental issues related to technology diffusion and analyses of the comparative technological impacts of alternative environmental policy instruments We conclude with suggestions for further research on technological change and the environment *Technological Change, Development and the Environment* Clem Tisdell, Priyatosh Maitra, 2018-04-09 Originally published in 1988 this book considers some of the major social economic and environmental questions raised by the role of new technology in development Throughout the discussions of issues like the sustainability of the development effected by new technology is supported by detailed case studies from countries such as India Australia New Zealand China Bangladesh and South Africa **Agriculture, Technological Change, and the Environment in Latin America: A 2020 Perspective** Eduardo J. Trigo, ArgenINTA Foundation, 1995 *Energy, the Environment, and Technological Change* David Popp, 2009 Within the field of environmental economics the role of technological change has received much attention The long term nature of many environmental problems such as climate change makes understanding the evolution of technology an important part of projecting future impacts Moreover in many cases environmental problems cannot be addressed or can only be addressed at great cost using existing technologies Providing incentives to develop new environmentally friendly technologies then becomes a focus of environmental policy This chapter reviews the literature on technological change and the environment Our goals are to introduce technological change economists to how the lessons of the economics of technological change have been applied in the field of environmental economics and suggest ways in which scholars of technological change could contribute to the field of environmental economics Technological Change and the Rural Environment Philip Lowe, Terry Marsden, Sarah Whatmore, 2023-06-08 Originally published in 1990 this volume addresses issues surrounding global ecological changes and sustainability of present patterns of urbanisation and industrialisation The

book discusses these problems and other issues such as how rural environments in many developed and developing countries have been transformed by a technological revolution Looking at a diverse range of topics from climate change to slurry pollution and the destruction of genetic resources to the risks of biotechnology this volume addresses these issues which concern the dynamics and social relations of technological change in rural areas [The Future of the Environment](#) Faye Duchin, Glenn-Marie Lange, 2023 This study examines the effect of technology on the environment from the perspective of economic development It argues that major changes in the use of technology must be implemented in order to avoid environmental degradation particularly in developing countries *Society and Technological Change, Fourth Edition* Rudi Volti, 2001 Argues that society pushes for technological change that in turn shapes society **Technology and Global Change** Arnulf Grübler, 2003-10-16 This is the first book to comprehensively describe how technology has shaped society and the environment over the last 200 years It will be useful for researchers as a textbook for graduate students for people engaged in long term policy planning in industry and government for environmental activists and for the wider public interested in history technology or environmental issues *The Endogenous Energy-Saving Technological Change in China's Industrial Sector* Xubo He, 2022-11-29 As improving energy efficiency and increasing energy R it established a mathematical model for the endogenous energy saving technological advancement of the industrial sector based on heterogeneous R it estimated the energy saving technological progress rate of 37 Chinese industrial sub sectors from 1980 to 2010 fourth it has empirically examined the relationship between the heterogeneous R D investment in China's industrial sector and its energy saving technological advancement rate [Society and Technological Change](#) Rudi Volti, 2005-06-07 Provides a comprehensive introduction to the interactions of society and technology The new fifth edition includes coverage of such timely topics as cloning stem cell research genetically modified foods terrorism intellectual property and the global impact of the internet **Economics and Technological Change** Rod Coombs, Paolo Saviotti, Vivien Walsh, 1987 An area of neglect in much of current economic theory has been its lack of attention to the impact of technological innovation on the structure and behavior of firms and the market This book is a comprehensive study of the economic implications of technological change for three primary institutions the firm the market and the civil sector **Fresh Perspectives: Human Resource Management**, 2006 **Operations Management** Michael Lewis, Nigel Slack, 2003 The material is concerned with fundamental activities of organizations how they provide goods and services The increase in international competition has seen a resurgence of interest in the development of this field [The Routledge Handbook of Environmental Economics in Asia](#) Shunsuke Managi, 2015-02-11 Problems of climate change biodiversity and air pollution are clearly growing globally but more particularly in Asia because of its economic importance and richness in nature The increasing interest in environmental and resource economics applied in regions of Asia will make this book an outstanding resource to the existing literature particularly in the fields of environmental and resource economics and the integration of applied content in traditional and

agricultural development At present there is no single handbook or text on the state of current knowledge in environmental economics in Asia or one which offers a comprehensive guide to students and academics on the subjects of environmental economics research This book will help to fill the gap in the existing literature *Technological Change and Employment in Western Europe* Louis Helion Blair,1985 *Climate Change 2007 - Mitigation of Climate Change* Intergovernmental Panel on Climate Change,2007-11-12 The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provide the most comprehensive and balanced assessment of climate change available This IPCC Working Group III volume provides a comprehensive state of the art and worldwide overview of scientific knowledge related to the mitigation of climate change It includes a detailed assessment of costs and potentials of mitigation technologies and practices implementation barriers and policy options for the sectors energy supply transport buildings industry agriculture forestry and waste management It links sustainable development policies with climate change practices This volume will again be the standard reference for all those concerned with climate change including students and researchers analysts and decision makers in governments and the private sector Technological Change and the Environmental Imperative Claes Brundenius,2003 The environmental imperative exerts strong pressure on polluting industries in the industrialized countries Environmentally friendly technologies are available but often at prohibitive costs Using evidence from the copper industry this book addresses the question of how polluting industries in developing and transition economies have responded to this challenge becoming cost efficient whilst acquiring less polluting technologies in the face of fierce competition The authors also discuss what has been the impact of privatization on this process and what lessons have been learnt Against this backdrop and drawing on case material from Chile China Peru and Russia the book goes on to assess the latest technological breakthroughs and their possible future impact on cost efficiency and the environment Technological Change and the Environment ,2007
