Technology Assessment Protecting Structures And Improving Communications During Wildland Fires:

Technology Assessment Robin M. Nazzaro (au), Keith A. Rhodes (au), 2005-09 Since 1984 wildland fires have burned 850 homes each year the number of homes at risk is growing The primary responsibility for ensuring that preventive steps are taken to protect homes lies with homeowners state local gov ts not the fed gov t The ability to communicate among all parties fighting a fire known as interoperability is essential but is hampered because different public safety agencies operate on different radio frequencies or use incompatible communications equip This report assesses measures that can help protect structures from wildland fires factors affecting use of protective measures the role technology plays in improving firefighting agencies ability to communicate during wildland fires Charts tables *Technology Assessment* Government Accountability Office, 2013-09-22 Since 1984 wildland fires have burned an average of 850 homes each year in the United States according to the National Fire Protection Association but because more people are moving to areas in or near fire prone wildlands the number of homes at risk is likely to grow Such areas where structures and other human development meet or intermingle with wildlands are commonly referred to as the wildland urban interface *Technology assessment protecting structures and improving communications during wildland fires : report to congressional requesters. ,* **Technology Assessment** United States. Nazzaro, 2010 The nation s wildland fire problems have worsened dramatically over the past decade with more than a doubling of average annual acreage burned and federal appropriations for wildland fire management The deteriorating fire situation has led the agencies responsible for managing wildland fires on federal lands the Forest Service in the Department of Agriculture and four agencies in the Department of the Interior to reassess how they respond to wildland fire and to take steps to improve their fire management programs This report reviewed 1 progress the agencies have made in managing wildland fire and 2 key actions previously recommended and are still necessary to improve wildland fire management Charts and tables *Legislative Establishment Appropriation Bill* United States. Marburger, III, Stephanie S. Shipp, 2011-03-18 Basic scientific research and technological development have had an enormous impact on innovation economic growth and social well being Yet science policy debates have long been dominated by advocates for particular scientific fields or missions In the absence of a deeper understanding of the changing framework in which innovation occurs policymakers cannot predict how best to make and manage investments to exploit our most promising and important opportunities Since 2005 a science of science policy has developed rapidly in response to policymakers increased demands for better tools and the social sciences capacity to provide them The Science of Science Policy A Handbook brings together some of the best and brightest minds working in science policy to explore the foundations of an evidence based platform for the field The contributions in this book provide an overview of the current state of the science of science policy from three angles theoretical empirical and policy in practice They offer perspectives from the broader social science behavioral science and policy communities on the fascinating challenges and prospects in this evolving arena Drawing on domestic and international experiences the text delivers insights about the critical questions that create a demand for a science of science policy

Assessing the Societal Implications of Emerging Technologies Evan S. Michelson, 2016-05-12 A growing problem of interest in the field of science and technology policy is that the next generation of innovations is arriving at an accelerating rate and the governance system is struggling to catch up Current approaches and institutions for effective technology assessment are ill suited and poorly designed to proactively address the multidimensional interconnected societal impacts of science and technology advancements that are already taking place and expected to continue over the course of the 21st century This book offers tangible insights into the strategies deployed by well known high profile organizations involved in anticipating the various societal and policy implications of nanotechnology and synthetic biology It focuses predominantly on an examination of the practices adopted by the often cited and uniquely positioned Project on Emerging Nanotechnologies in the United States as well as being informed by comparisons with a range of institutions also interested in embedding forward looking perspectives in their respective area of innovation The book lays out one of the first actionable roadmaps that other interested stakeholders can follow when working toward institutionalizing anticipatory governance practices throughout the policymaking process
