## **Technology At Work:**

People and Technology in the Workplace National Research Council, National Academy of Engineering, Commission on Behavioral and Social Sciences and Education, 1991-02-01 Quick introduction of new technology is essential to America's competitiveness. But the success of new systems depends on their acceptance by the people who will use them. This new volume presents practical information for managers trying to meld the best in human and technological resources. The volume identifies factors that are critical to successful technology introduction and examines why America lags behind many other countries in this effort. Case studies document successful transitions to new systems and procedures in manufacturing, medical technology, and office automation ranging from the Boeing Company's program to involve employees in decision making and process design to the introduction of alternative work schedules for Mayo Clinic nurses. This volume will be a practical resource for managers, researchers, faculty, and students in the fields of industry, engineering, design, human resources, labor relations, sociology, and organizational behavior.

The Internet in the Workplace Patricia Wallace, 2004-02-02 The capabilities offered by netcentric technologies might seem to eliminate the need for physical workplace altogether, but the workplace remains partly because the virtual and in fact the physical appearance of a typical office looks about the same. Nevertheless, the psychological characteristics of the workplace have changed considerably. Workers from the mail room clerk to the CEO are learning new skills to capitalize on the net's power but avoid the egregious blunders that the net so dramatically amplifies. In The Internet in the Workplace, Wallace shows how netcentric technologies touch every kind of workplace and explores the challenges and dilemmas they create.

**Technology and Work in Services** Valeria Cirillo, Matteo Rinaldini, Maria Enrica Virgillito, 2025-07-14 Automation in industrial sectors is already a well-developed topic in management, economics, and sociology literature. By contrast, this short contributed volume sheds new lights on the process of automation in the service sector by means of a workplace case study approach. It investigates three essential sectors largely populated by a vulnerable workforce composition: namely, logistics, cleaning, and healthcare, and assesses the extent to which processes of automation introduced by managerial decisions entail labour expulsion and human substitution. The result of the research shows that the most low-valued workers are among the least automatable because of the inherent complexity of their activities. Leveraging on this, the book argues the need to reconsider the essentiality of labour as determinant of its value. It will be of great interest to scholars and students of management, economics, and sociology with an interest in labour, industrial relations, innovation, and decent work and employment.

Information Technology and the World of Work Daphne Gottlieb Taras,James T. Bennett,Anthony M. Townsend,2004 Information technologies have become both a means and an end transforming the workplace and how work is performed This ongoing evolution in the work process has received extensive coverage but relatively little attention has been given to how changing technologies and work practices affect the workers themselves This volume specifically examines the institutional and social environment of the workplaces that information technologies have created Compilations of scholarly essays are often written by members of a particular school of thought

whose purpose is to flesh out an area of theory or methodology *Information Technology and the World of Work* takes a different approach these essays are written by diverse voices unified in their interest in the common theme of technology and the changing workplace The authors goals are to present perspectives that raise as many questions as they answer and which are accessible to a broad audience of managers union leaders students and academic readers The chapters are organized into three specific topical areas that represent aspects of workers social and political experiences of work that are affected by technology Part 1 addresses how information technologies affect workers unions Part 2 examines how information technology affects individual employees specifically in terms of employees sense of power and identity Chapters in this section examine the social and psychological reactions of workers within the system Part 3 focuses on one of the most contentious outcomes of this changed workplace reviewing emerging policy and privacy issues that new technologies have created Written with the intent of beginning an important discussion of these issues this volume should provide an impetus for others to make their own contribution to the emerging dialogue on technology in the modern workplace Daphne G Taras is professor of industrial relations and associate dean research in the Haskayne School of Business University of Calgary James T Bennett is professor of economics at George Mason University and founder and editor of the *Journal of Labor Research* Anthony M Townsend is an associate professor of management information systems in the College of Business at Iowa State University and on the faculty of Iowa State University Industrial Relations Center

*The Machine at Work* Keith Grint, Steve Woolgar, 2013-06-28 This highly topical book is a concise and accessible account of the relationship between technology and work Firstly it reviews and critically assesses a variety of recent approaches to the social and cultural dimensions of technology Secondly it examines the implications of these new approaches for existing ideas about the nature of technology and work organization At the core of much thinking about technology is the assumption that the technical character and capacity of artefacts is given The enduring image of deus ex machina captures the idea that it is the essential capacity within a technology which in the end accounts for the way we organize ourselves our work and other life experiences Recent work in the sociology of technology by contrast sets out relativist and constructivist accounts of technology which begin to challenge this central assumption *The Machine at Work* includes a reinterpretation of the Luddites a review of the social processes of development in information technology a reassessment of theories of the role of technology in work and an analysis of the common limitations of some constructivist and feminist perspectives on technology The book argues that only a commitment to a particular conception of constructivism enables the kind of radical rethinking about technology and work relations that is needed This engaging and informative text will be of interest to students in a range of subject areas from sociology organizational theory and behaviour to industrial relations management and business studies

*Technology and the Future of Work* Paul S. Adler, 1992 This book brings together a set of essays exploring the implications of new technologies in the workplace The common premise of the contributions is that the effective

implementation of automation in manufacturing and engineering operations will typically require a workforce with a higher skill profile Examining the experience of countries in Europe Australia Asia and the U S the book analyzes four themes the new competencies required for effective implementation of new technologies how firms can develop these new competencies the implications of these changes for industrial relations and how firms can weave together business strategy technology strategy and personnel strategy to build competitive advantage with greater rather than lesser skills This argument contradicts the conventional assumption that automation will not only reduce the number of workers required to produce a given product but also require less skilled workers to do so

**Designing Technology, Work, Organizations and Vice Versa** Enrico Attila Bruni, Laura Lucia Parolin, Cornelius Schubert, 2015-09-01 The concept of design has been defined in a multitude of ways and used in a variety of academic fields ranging from the classics of organizational and system design to studies on corporate culture aesthetics and consumption However in mainstream organization and management studies the concept of design has been black boxed and easily implied as an updated and more fashionable version of the traditional idea of structuring organizational processes At the same time working and organizing seem to be embedded nowadays in increasingly complex and situated technologies and practices If the spreading of information and communication technologies ICTs has changed workplaces and even the very meaning of workplace as an area marked by the physical presence of different human actors working and organizing mobilizes the joint action of humans technologies and knowledges The aim of the book is thus to discuss the relations among technologies work and organisations from multiple theoretical perspectives and to engage with questions about design as well as the sociomaterial foundations of working and organising The book focuses on the close study of practices and processes that inextricably link work and organisation to the use of artefacts and technological systems and vice versa exploring by means of different cases of organizational and design research articulations and disarticulations of daily work and design the doing of objects and technologies in everyday organizational life the reconstruction of organizational processes through technological and design practices the relation between learning innovations and technologies in organizational settings The book is addressed to graduate students PhDs scholars and researchers interested in the fields of Organization Studies Science and Technology Studies Sociology and Design as well as to professionals and practitioners interested in new methodological approaches towards the relations between technology work and organization

**Persistent Work-related Technology Use, Recovery and Well-being Processes** Lenka Ďuranová, Sandra Ohly, 2015-12-15 The aim of this work is to provide insight into the process of employee recovery and well being in regard to work related ICT use during after hours Therefore we discuss 1 theories that help us to understand the determinants and outcomes of this behavior 2 our core concepts recovery and well being and 3 previous empirical findings on ICT use after hours for work purposes On the basis of literature review we propose a new conceptual overall framework of ICT use after hours for work purposes with the focus on employee recovery and well being processes Thereby we posit ICT use after hours for work purposes as potential stressor resource or demand see action theory by Hacker 1998 2003 Frese and Zapf 1994 depending on many personal and environmental factors but primarily on cognitive appraisals see transactional model of stress by Lazarus and Folkman 1984 This three way division enables us to propose various linear and non linear associations to focused outcomes We conclude with an overall discussion on further research concerning the identified research gaps
