Technology, Planning, and Self-reliant Development Francisco R. Sagasti, 1979 *International Technology Flows And The Technology Gap* Jan Monkiewicz, 2019-04-01 This book assesses under what conditions and to what extent international technology transfer may contribute to technology gap closure in overall industrial activity It is of particular interest for all developing countries as well as for the socialist countries of Eastern Europe Science and Technology in a Developing World T. Shinn, J. Spaapen, V.V. Krishna, 2013-04-17 block possible Soviet expansion by mobilizing European democracies the policy soon extended to some developing countries in Asia and Latin America In response the USSR gradually initiated development programs for newly independent nations in Asia and Africa In this context super power rivalry operated in the South to i expand spheres of influence and control ii guard Southern nations from the influence and incursions launched by the opposed camp iii stimulate indigenous development With few exceptions Southern nations provided little input to the definition and execution of North South dynamics during this period In the case of Africa and to some extent Asia the acquisition of independence was so recent and often sudden that there was little time to reflect on the kind of policies and measures needed to build balanced relations with the former mother country In Latin America the Monroe Doctrine had long insured that the region was a virtual captive of the US Aid for development was contingent on conformity to US political and economic interests The cognitive component of South North dealings strongly reflected the two above mentioned dispositions The relative lack of political experience in the South and the dearth of an organized and sizable intellectual academic community meant that there were few cognitive and human resources for undertaking careful study and analysis of the conditions and needs of development from a Southern perspective influential exceptions existed though such as Raul Prebisch in Latin America or Gandhi in India Technological Capabilities in Developing Countries Ruby Gonsen, 2016-02-17 This book combines the concept of technological capabilities from the development literature with an explanation of the specifics of these capabilities in industrial areas affected by new biotechnology This provides a framework of analysis for the modern bioprocessing industry in Mexico The necessity to go beyond mastery of imported technologies for these industries is discussed More generally the absence of core scientific capabilities at the firm level and other country specific factors deter the potential for developing countries to catch up in biotechnology Science And Technology In A Changing International Order Volker Rittberger, 2019-06-21 As part of its contribution to the 1979 United Nations Conference on Science and Technology for Development IUNCSTD the United Nations Institute for Training and Research UNITAR organized an informal research group to assess various aspects of applying science and technology to development through the United Nations system This research group was constituted in early 1978 at the initiative of Dr Robert S Jordan former Director of Research at UNITAR and was headed by Professor Volker Rittberger a UNITAR Special Fellow One of the activities of this group has been the production of a series of working papers on science and technology

These papers seek to provide preliminary analyses rather than definitive conclusions Their purpose is to facilitate the access of others to the ongoing work of the group and to stimulate critical comments and reactions leading to further improvement of this work

Knowledge and Innovation for Development Francisco R. Sagasti, 2005-01-01 Sagasti director of the think tank Agenda PER in Lima compares building science and technology capabilities in unindustrialized countries to the eternally futile task of Sisyphus in the Greek myth

Industrial Policy, Technology, and International Bargaining Etel Solingen, 1996 This book suggests an innovative approach to understanding the sources of industrial policy and technological development The conceptual sections address long standing debates over the nature of the state and ruling coalitions the political power of private actors the process of international bargaining and the determinants of technological change in the industrializing world The empirical study constitutes the first book length comparison of the Argentine and Brazilian nuclear programs using a multidisciplinary approach that ranges from the broad macropolitical to the most specific microeconomic Finally the book provides a perspective on the nuclear sector in industrializing states that the more typical concentration on strategic aspects has obscured

Technology Transfer And Development R. C. Mascarenhas, R C Mascarenhas, 2019-08-21 In most Third World nations importing technology from other countries is considered vital to industrialization and economic development This book examines the processes of technology transfer and development by tracing how Hindustan Machine Tools a public enterprise in India successfully collaborated with manufacturers from industrialized nations in its growth from a single factory to a diversified industrial complex The author critically analyzes the company's overall strategies for diversification and expansion and its approaches to selecting acquiring absorbing and generating technology and to developing appropriate management He also points to important relationships between policy efficiency and administrative efficiency and discusses socioeconomic and cultural factors that can obstruct the successful development and operation of an industrial enterprise in a developing country

Technological Transformation E.F. Byrne, Joseph C. Pitt, 2012-12-06 The philosophical study of technology has acquired only recently a voice in academic conversation This situation is due in part to the fact that technology obviously impacts on the real world whereas the favored stereotype of philosophy allegedly does not Furthermore in some circles it was assumed that philosophy ought not impinge on the world This bias continues today in the form of a general dismissal of the growing area now referred to as applied philosophy By contrast the academic scrutiny of science has for the most part been accepted as legitimate for some 30 years primarily because it has been conducted in a somewhat ethereal manner This is in part because it was believed that science being pure one could think even philosophically about science without jeopardizing one's intellectual purity Since World War II however practitioners of the metascientific arts have come to acknowledge that science also shows signs of having touched down on numerous occasions in what can only be identified as the real world No longer able to keep this banal truth a secret purists have sought to defuse its import by stressing the difference between pure and applied science and lest

science be tainted by contact with the world through its applications they have devoted additional energy to separating applied science somehow from technology *Cooperative Forms of Transnational Corporation Activity* Peter J. Buckley, John H. Dunning, 1994

Growth without Development Rubén Berriós, 2018-11-26 This book examines how some growing countries are experiencing economic development while others are falling behind It addresses the fundamental issues of development strategies by examining country specific policies that have resulted in success or failure The author focuses on Peru and makes comparisons with Chile and South Korea exploring the question of why the latter two countries have been more successful while Peru has lagged behind despite bountiful natural resources and the potential to develop into a robust economy The central question is to understand why some countries achieve economic development while others face enormous challenges and fail to do so

The Power of Ideology Emanuel Adler, 2024-06-21 In this prodigiously researched book Emanuel Adler addresses the hotly contested issue of how developing nations can emerge from the economic and technological tutelage of the developed world Is the dependence of Third World countries on multinational corporations especially in the realm of high technology a permanent fixture of an inherently unequal relationship Or can it be managed by the developing nations for their benefit By a masterful comparative study of the development of science and technology in Argentina and Brazil the author discusses governmental policies that are effective in attaining autonomous technological development Professor Adler provides a useful corrective to the structural theories of development that have up to now prevailed in the study of international relations by demonstrating that intellectual and technological elites play a far more significant role in the success or failure of such governmental policies than has hitherto been recognized This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1988

Science and Technology in Development Planning Victor L. Urquidí, 2013-10-22 Science and Technology in Development Planning Science Technology and Global Problems covers the proceedings of the Symposium on Science and Technology Development Planning The book presents several papers that tackle one of the agendas of the symposium intended to convey to the reader

the main lines of thought brought to the symposium and to illustrate various approaches The 17 chapters of the text are organized into five parts according to what agenda they cover The first part tackles the interaction between science and technology and long range development goals and strategies while the second part deals with the science and technology in sectoral planning Part III covers the incorporation of science and technology in the techniques of development planning Part IV discusses the planning of science and technology in the development process The last part talks about international cooperation The book will be of great interest to readers cornered with the progress of science and how it will influence the world
