Lawrence,Derek Braddon,2017-03-02 The U S economy is generally considered to run on free market or laissez faire principles implying that U S policy makers do not provide government support for industrial or commercial sectors While mostly true it is not the case with strategic industries such as aerospace Support for the aerospace sector has been viewed as essential because aerospace technologies have been the material backbone of U S security systems But American historic dominance in commercial aerospace and particularly the large commercial aircraft sector arose on the back of defence technology paid for by the US government Aerospace Strategic Trade analyses the subsidy of the U S large commercial aircraft LCA industry and redefines the terms of the Airbus Boeing subsidy debate This is achieved by tracking the benefits to Boeing of the Research and Technology contracts granted by the DoD and NASA The book is characterized by a new level of methodological precision in the database upon which the factual claims rest and the analysis derives from an exhaustive search of U S public databases and also data on federal R D contracts obtained under the Freedom of Information Act FOIA in the USA The overall analysis brings together these two approaches and provides a balanced and highly informative account of U S federal funding of the American large commercial aircraft sector This book is of interest to academics industrialists and government officials concerned with the aerospace industry to managers and executives in the aerospace industry *Resources in Education* ,1997 **The Week in Review** ,1993 **Trading with the Enemy** Hugo Meijer,2016-03-01 In light of the intertwining logics of military competition and economic interdependence at play in US China relations Trading with the Enemy examines how the United States has balanced its potentially conflicting national security and economic interests in its relationship with the People s Republic of China PRC *The NIH Record* ,1992 *Capital, Emerging High-Growth Firms and Public Policy* Terry F. Buss,2001-03-30

Policy makers Republican and Democrat liberal and conservative call for federal intervention to fund emerging high growth industries believing they are starved for capital Congressional hearings newspapers industry newsletters and government reports all assert that capital gaps exist for these firms But the widely held belief that emerging high growth firms like those in high technology so vital to the growth of the U S economy face severe capital gaps preventing them from starting up or growing to their full potential is false This book systematically brings together for the first time disparate sources of information from a wide variety of disciplines and synthesizes them into a compelling case against federal intervention Scientific studies conventional wisdom among entrepreneurs and investors and economic reasoning all fail to support the existence of widespread capital gaps for start up high growth firms Nor does this evidence show capital in short supply in some regions in industrial sectors including high technology or for women and minorities Nor do existing federal programs providing capital to emerging high growth businesses reveal capital gaps Rather they either unnecessarily duplicate private investment or represent poor investment decisions This study shows that calls for increased federal intervention using public monies to plug capital gaps are unjustified
