Sustainable Postharvest Technologies for Fruits and Vegetables Sajid Ali, Shabir Ahmad Mir, B.N. Dar, Shaghef Ejaz, 2024-08-30 Fruits and vegetables, commonly termed as fresh produce, are an important component of the human diet, as these provide various beneficial and essential health-related compounds. Nevertheless, fresh produce is susceptible to postharvest deterioration and decay along with loss of certain nutrients due to inappropriate storage conditions and lack of standard postharvest technologies. In addition, the short shelf life is considered another major constraint that must be extended after harvest to ensure a wider availability window of the fresh produce for consumers. From this perspective, the use of postharvest approaches is considered imperative to reduce the deterioration of harvested fresh produce in order to extend their storage and shelf life potential on a sustainable basis. Sustainable Postharvest Technologies for Fruits and Vegetables covers various aspects of postharvest technologies with major developments over the recent past and provides a way forward for the future. The sustainable use of various technologies and elicitors could be adapted from farm to fork in order to conserve the eating quality of fresh produce. Therefore, this book covers various sustainable postharvest treatments and technologies that could be considered highly effective for the delay of postharvest senescence and deterioration. Among the various technologies, the use of preharvest treatments, controlled atmosphere, dynamic control atmosphere, modified atmosphere, and hypobaric conditions has tremendous potential for the fresh fruits and vegetables industry. In the same way, cold plasma, pulsed light, ultraviolet light, ultrasound technology, nanoemulsions, nano packaging, electrolyzed water, high pressure processing, ozone gas irradiations, edible coatings, vacuum packaging, and active packaging with slow-releasing compounds, along with nanotechnology, are highly practicable and possess tremendous potential to be used in the maintenance of overall eating quality and storage life extension of the fresh produce.

**Key Features:** Overviews the major factors affecting postharvest physiology and shelf life potential of fresh produce. Focuses on major sustainable technologies having the potential to maintain postharvest quality and extend shelf life of fruits and vegetables. Describes practical and recent advances of various approaches indispensable for the maintenance of overall eating quality and food safety attainment for fresh produce on a sustainable basis. Covers how quality maintenance and shelf life rely on preharvest practices.

Badhineni Akash, 2025-07-03 **Crop Post-Harvest: Science and Technology, Volume 3** Debbie Rees, Graham Farrell, John Orchard, 2012-01-30 International trade in high value perishables has grown enormously in the past few decades In the developed world consumers now expect to be able to eat perishable produce from all parts of the world and in most cases throughout the year Perishable plant products are however susceptible to physical damage and often have a potential storage life of only a few days Given their key importance in the world economy Crop Post Harvest Science and Technology Perishables devotes itself to perishable produce providing current and comprehensive knowledge on all the key factors affecting post harvest quality of fruits and vegetables This volume focuses explicitly on the effects and causes of deterioration as well as the many techniques and practices implemented to maintain quality through correct handling and storage As highlighted throughout regular losses caused by post harvest spoilage of perishable products can be as much as 50% A complete understanding as provided by this excellent volume is therefore vital in helping to reduce these losses by a significant percentage Compiled by members of the world renowned Natural Resources Institute at the United Kingdom's University of Greenwich with contributions from experts around the world this volume is an essential reference for all those working in the area Researchers and upper level students in food science food technology post harvest science and technology crop protection applied biology and plant and agricultural sciences will benefit from this landmark publication Libraries in all research establishments and universities where these subjects are studied and taught should ensure that they have several copies for their shelves *Postharvest Technology of Horticultural Crops: Atmospheric Environment* Elizabeth J. Mitcham, Adel Kader, Michael S. Reid, Mikal Saltveit, 2023-12-21 Drawing on the expertise of the University of California's Postharvest Technology Center this publication discusses commercial uses of modified or controlled atmosphere technology which can be used during transport temporary storage or long term storage of horticultural commodities destined for the fresh market or processing In modified atmospheres and controlled atmospheres gases are removed or added to create an atmospheric composition around a commodity that is different from that of air Modified or controlled atmosphere technology can be used during transport temporary storage or long term storage of horticultural commodities destined for the fresh market or processing Chapter 1 discusses how modified or controlled atmosphere technology can be used during transport temporary storage or long term storage of horticultural commodities destined for the fresh market or processing Chapter 2 discusses the ways biologically important gases are sampled analyzed and mixed Since the rate of respiration of plant tissue is tightly coupled to its overall metabolic rate and often inversely proportional to shelf life the measurement and control of respiration are of vital interest in devising strategies to maintain quality after harvest Chapter 3 discusses the role of Ethylene in the postharvest life of many horticultural crops Sometimes this role is

beneficial promoting faster and more uniform ripening before retail distribution and sometimes it is deleterious speeding senescence and reducing shelf life This chapter addresses the properties of this gas and ways to both harness its beneficial effects and avoid undesirable results during the postharvest handling of perishable commodities **Postharvest**

**Technology of Horticultural Crops: Cooling and Storage** James F. Thompson, Irwin R. Donis-González, Tom Rumsey, Farzaneh Khorsandi, Erin DiCaprio, 2023-12-21 About one third of fresh produce harvested worldwide is lost at various points in the distribution system between production and consumption While it is impossible and uneconomical to eliminate these losses completely it is possible to reduce them by at least half and increase food availability The first chapter of this volume describes both proper temperature management practices for perishable commodities and the commercially used methods for cooling fruit vegetables and cut flowers It is written for a person who is initially investigating produce cooling a professional designer who needs design details and an operator who wants a better understanding of practical operation guidelines The chapter contains a complete discussion of design for forced air coolers hydrocoolers and vacuum coolers the most commonly used cooling methods that people with a good background in industrial refrigeration can design The second chapter is an overview of cold storage for perishables It describes the unique issues associated with designing a cold storage for perishables Worker safety and food safety for cooling and storage systems have become important issues for the industry and they are discussed in chapters 3 and 4 The volume concludes with chapter 5 which describes the effects of air temperature and humidity on postharvest quality and temperature and humidity measurement methods
