[Pierre Teilhard De Chardin on People and Planet](#) Celia Deane-Drummond,2017-07-05 Humanity's relationship to nature is central to the work of Pierre Teilhard de Chardin an influential priest and scientist of the twentieth century Teilhard believed that spiritual development must be viewed alongside material development and that evolutionary theory lies at the heart of humanity's understanding of its place in the world Pierre Teilhard de Chardin on People and Planet argues that Teilhard's cosmic mysticism and intense interest in both cosmological and evolutionary sciences are highly relevant to current debates about how best to construct a meaningful spirituality The book offers a critical revision of Teilhard's thought in the light of current debates in evolutionary science eco theology and environmental ethics The essays present fresh interpretations of Teilhard's work and point to the significance of his thought in the contemporary study of science and religion **Spirit, Soul, Body** Cyprian Consiglio,2015 A perennial problem for spiritual traditions of all sorts is dualism either a positing of a

false distance between the Divine and the created or a rejection of creation and the human body Many contemporary spiritual seekers have sensed this problem and sought to remedy it through myriad solutions drawn from various spiritual traditions and secular wisdom both Eastern and Western Cyprian Consiglio OSB Cam explores Christianity's contribution to the discussion He offers a revisioning and rearticulation of this teaching based on the prophetic seminal work of Bede Griffiths toward a practical and integral spirituality that reverences all aspects of our being human spirit soul and body

The Darwinian Tradition in Context Richard G. Delisle, 2017-12-29 The main goal of this book is to put the Darwinian tradition in context by raising questions such as How should it be defined Did it interact with other research programs Were there any research programs that developed largely independently of the Darwinian tradition Accordingly the contributing authors explicitly explore the nature of the relationship between the Darwinian tradition and other research programs running in parallel In the wake of the Synthetic Theory of Evolution which was established throughout the 1930s 1940s and 1950s historians and philosophers of biology devoted considerable attention to the Darwinian tradition i e linking Charles Darwin to mid Twentieth Century developments in evolutionary biology Since then more recent developments in evolutionary biology have challenged in part or entirely the heritage of the Darwinian tradition Not surprisingly this has in turn been followed by a historiographical recalibration on the part of historians and philosophers regarding other research programs and traditions in evolutionary biology In order to acknowledge this shift the papers in this book have been arranged on the basis of two main threads Part I A perspective that views Darwinism as either being originally pluralistic or having acquired such a pluralistic nature through modifications and borrowings over time Part II A perspective blurring the boundaries between non Darwinian and Darwinian traditions either by contending that Darwinism itself was never quite as Darwinian as previously assumed or that non Darwinian traditions took on board various Darwinian components when not fertilizing Darwinism directly Between a Darwinism reaching out to other research programs and non Darwinian programs reaching out to Darwinism the least that can be said is that this interweaving of intellectual threads blurs the historiographical field This volume aims to open vital new avenues for approaching and reflecting on the development of evolutionary biology

Engineers of Happy Land Rudolf Mrázek, 2018-06-05 Based on close reading of historical documents poetry as much as statistics and focused on the conceptualization of technology this book is an unconventional evocation of late colonial Netherlands East Indies today Indonesia In considering technology and the ways that people use and think about things Rudolf Mr zek invents an original way to talk about freedom colonialism nationalism literature revolution and human nature The central chapters comprise vignettes and take up in turn transportation from shoes to road building to motorcycle clubs architecture from prison construction to home air conditioning optical technologies from photography to fingerprinting clothing and fashion and the introduction of radio and radio stations The text clusters around a group of fascinating recurring characters representing colonialism nationalism and the awkward inevitable presence of the European cultural intellectual

and political avant garde Tillema the pharmacist author of Kromoblanda the explorer engineer IJzerman the Javanese princess Kartina the Indonesia nationalist journalist Mas Marco the Dutch novelist Couperus the Indonesian novelist Pramoedya Ananta Toer and Dutch left wing liberal Wim Wertheim and his wife In colonial Indies as elsewhere people employed what Proust called remembering and what Heidegger called thinging to sense and make sense of the world In using this observation to approach Indonesian society Mr zek captures that society off balance allowing us to see it in unfamiliar positions The result is a singular work with surprises for readers throughout the social sciences not least those interested in Southeast Asia or colonialism more broadly

The Mystery of Evolutionary Mechanisms Robert F. Shedinger, 2019-06-28 Is Darwinian evolution really the most successful scientific theory ever proposed or even the best idea anyone has ever had as Daniel Dennett once put it *The Mystery of Evolutionary Mechanisms* provides a comprehensive critical reading of the literature of evolutionary biology from Darwin to Dobzhansky to Dawkins revealing this popular account of evolution to be a grand narrative of Darwinian triumph that greatly overstates the empirical validity of modern evolutionary theory The mechanisms driving the evolutionary process truly remain a mystery more than one hundred fifty years after *Origin of Species* a fact that can free religion scholars to think in more creative ways about the positive contributions religious reflection might make to our understanding of life s origin and diversity *The Mystery of Evolutionary Mechanisms* calls for an embrace of mystery understood not as an abdication of the scientific quest for truth but as a courageous and humble acknowledgment of the limits of human reason and an openness to a fundamentally religious orientation toward life
