British Army Communications in the Second World War Simon Godfrey, 2013-05-09 Command Control Communications and Intelligence form the backbone of the Army's operating system But while much attention has been given in the literature to the other three elements Communications in the British Army during World War II have been widely ignored This book rectifies the omission It shows that failures in front line communications contributed to several of the setbacks suffered by the Army but also that ultimate victory was only achieved after a successful communications system was in place It explains how the outcome of the main campaigns in Europe and North Africa depended on communications how the system operated and how it evolved from a relatively primitive and inadequately supplied state at Dunkirk to a generally effective system at the time of the Rhine crossings Problems still occurred however for example at infantry platoon level and famously with paratrooper

communications at Arnhem often simply due to the shortcomings of existing technology The book concludes that it is only very recently that advances in technology have allowed those problems to be solved *Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations for 1990: Department of Justice* United States. Congress. House. Committee on Appropriations. Subcommittee on the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies,1989 *Telecommunications and Empire* Jill Hills,2023-12-11 Jill Hills picks up from her pathbreaking study *The Struggle for Control of Global Communication The Formative Century* to continue her examination of the political technological and economic forces at work in the global telecommunications market from World War II to the World Trade Organization agreement of 1997 In the late twentieth century focus shifted from the creation and development of global communication markets to their intense regulation The historical framework behind this control where the market was regulated by what institution controlled by what power and to whose benefit masterfully complements Hills s analysis of power relations within the global communications arena Hills documents attempts by governments to direct replace and bypass international telecommunications institutions As she shows the results have offered indirect control over foreign domestic markets government management of private corporations and government protection of its own domestic communication market Hills reveals that the motivation behind these powerful regulatory efforts on person to person communication lies in the unmatched importance of communication in the world economy As ownership of communications infrastructure becomes more valuable governments have scrambled to shape international guidelines Hills provides insight into struggles between U S policymakers and the rest of the world illustrating the conflict between a growing telecommunications empire and sovereign states that are free to implement policy changes Freshly detailing the interplay between U S federal regulation and economic power Hills fosters a deep understanding of contemporary systems of power in global communications

Business in Britain in the Twentieth Century Richard Coopey,Peter Lyth,2009 This collection of fresh incisive scholarship by some of the leading business historians critically examines the nature of economic recovery in Britain in recent years Covering the key issues for business history in this period the book confronts the traditional literature on conclusions of relative decline and monocausal simplistic explanations It provides an impressive range of studies forming a platform for a new debate on the nature of British business in the 20th century Themes include productivity management research and development marketing regional clusters and networks industrial policy the use of technology and gender Sector studies include newer post war hopefuls and successes including aerospace IT retail banking overseas investment the creative industries The book demonstrates that our understanding of the historic strengths and weaknesses of business in Britain and the shifting balance between sectors of the economy has until now been poorly understood and that British business history needs a fundamental reappraisal

Governing Global Networks Mark W. Zacher, Brent A. Sutton, 1996 *Governing Global Networks* argues that most international regimes are grounded in states mutual cooperation and not in the dictates of the most powerful states It focuses on the regimes for four important international industries shipping air transport telecommunications and postal services Of particular importance to these regimes have been states interests in both the free flow of commerce and their policy autonomy The authors examine the relationship between these potentially conflicting goals In particular they trace the impact of deregulation which has led some states increasingly to place gains from economic openness ahead of their desire to maintain a high degree of control of their own economies and to the decline of the traditional cartel elements of these regimes This analysis is an important contribution to theoretical debates between neo realists and neo liberals in the study of international organisations and international political economy

Visions of a Digital Nation Jacob Ward, 2024-02-06 Why the privatization of British Telecom signaled a pivotal moment in the rise of neoliberalism and how it was shaped by the longer development and digitalization of Britain s telecommunications infrastructure When Margaret Thatcher sold British Telecom for 3 6 billion in 1984 it became not only at the time the largest stock flotation in history but also a watershed moment in the rise of neoliberalism and deregulation In *Visions of a Digital Nation* Jacob Ward offers an incisive interdisciplinary perspective on how technology prefigured this pivot Giving due consideration to the politicians engineers and managers who paved the way for this historic moment Ward illustrates how the decision validated the privatization of public utilities and tied digital technology to free market rationales In this examination of the national and at times global history of technology Ward s approach is sweeping Utilizing infrastructure studies environmental history and urban and local history Ward explores Britain s nationalist and welfarist plans for a digital information utility and shows how these projects contested and adapted to the market turn under Margaret Thatcher Ultimately *Visions of a Digital Nation* compellingly argues that politicians did not impose neoliberalism top down but that technology engineers and managers shaped these politics from the bottom up
