Demand for Communications Services - Insights and Perspectives James Alleman,Áine Marie Patricia

Ní-Shúilleabháin,Paul N. Rappoport,2013-10-07 This volume grew out of a conference organized by James Alleman and Paul Rappoport conducted on October 10 2011 in Jackson Hole Wyoming in honor of the work of Lester D Taylor whose pioneering work in demand and market analysis has had profound implications on research across a wide spectrum of industries In his Prologue Eli M Noam notes that demand analysis in the information sector must recognize the public good characteristics of media products and networks while taking into account the effects of interdependent user behavior the strong cross elasticities in a market as well as the phenomenon of supply creating its own demand The second Prologue by Timothy Tardiff and Daniel Levy focuses more specifically on Taylor s body of work in particular its practical applications and usefulness in analyses of and practices within the Information and Communications Technology ICT sector known in Europe and elsewhere as the Telecommunications Media and Technology TMT sector The remainder of the book is organized into four parts Advances in Theory Empirical Applications Evidence Based Policy Applications and a final Conclusion The book closes with an Appendix by Sharon Levin and Stanford Levin detailing Taylor s contributions using bibliometrics Not only featuring chapters from distinguished scholars in economics applied sciences and technology this volume includes two

contributions directly from Lester Taylor providing unique insight into economics from a lifetime in the field What a worthy book Every applied researcher in communications encounters Lester Taylor s work Many empirical exercises in communications can trace their roots to Taylor s pioneering research and his thoughtful leadership This book assembles an impressive set of contributors and contributions to honor Taylor No surprise the collection extends far and wide into many of the core topics of communications and media markets The emphasis is where it should be on important and novel research questions informed by useful data Shane Greenstein Professor of Management and Strategy Kellogg School of Management Northwestern University For more than 40 years Lester Taylor has been a leader in the application of consumer modeling econometric techniques and microeconomic data to understand residential and business user behavior in telecommunications markets During that time he inspired a cadre of students and colleagues who applied this potent combination to address critical corporate and regulatory issues arising in the telecommunications sector This volume collects the recent product of many of these same researchers and several other devotees who go beyond empirical analysis of fixed line service by extending Prof Taylor s approach to the next wave of services and technologies These contributions including two new papers by Prof Taylor offer an opportunity for the next generation to learn from his work as it grapples with the pressing issues of consumer demand in the rapidly evolving digital economy Glenn Woroch Adjunct Professor of Economics University of California Berkeley

Who Pays for Universal Service? Robert W. Crandall, Leonard Waverman, 2010-12-01 In virtually every country the price of residential access to the telephone network is kept low and cross subsidized by business services long distance calling and various other telephone services This pricing practice is widely defended as necessary to promote universal service but Crandall and Waverman show that it has little effect on telephone subscriptions while it has major harmful effects on the value of all telephone service The higher prices for long distance calls reduce calling shift the burden of paying for the network to those whose social networks are widely dispersed Therefore many poor and rural households the intended beneficiaries of the pricing strategy are forced to pay far more for telephone service than they would if prices reflected the cost of service Despite these burdens Congress has extended the subsidies to advanced services for schools libraries and rural health facilities Crandall and Waverman show that other regulated utilities are not burdened with similarly inefficient cross subsidy schemes yet universality of water natural gas and electricity service is achieved As local telephone service competition develops in the wake of the 1996 Telecommunications Act the universal service subsidy system will have to change Subsidies will have to be paid from taxes on telecom services and paid directly to carriers or subscribers Crandall and Waverman show that an intrastate tax designed to pay for each state s subsidized subscriptions is far less costly to the economy than an interstate tax Robert W Crandall is a senior fellow in Economic Studies at the Brookings Institution Leonard Waverman is a visiting professor at the London Business School on leave from the University of Toronto They are coauthors of *Talk Is Cheap The Promise of Regulatory Reform in North American Telecommunications* Brookings 1995 *Consumer*

Demand in the United States Lester D. Taylor, H.S. Houthakker, 2009-11-25 A classic treatise that defined the field of applied demand analysis *Consumer Demand in the United States Prices Income and Consumption Behavior* is now fully updated and expanded for a new generation Consumption expenditures by households in the United States account for about 70% of America's GDP The primary focus in this book is on how households adjust these expenditures in response to changes in price and income Econometric estimates of price and income elasticities are obtained for an exhaustive array of goods and services using data from surveys conducted by the Bureau of Labor Statistics and aggregate consumption expenditures from the National Income and Product Accounts providing a better understanding of consumer demand Practical models for forecasting future price and income elasticities are also demonstrated Fully revised with over a dozen new chapters and appendices the book revisits the original Houthakker Taylor models while examining new material as well such as the use of quantile regression and the stationarity of consumer preference It also explores the emerging connection between neuroscience and consumer behavior integrating the economic literature on demand theory with psychology literature The most comprehensive treatment of the topic to date this volume will be an essential resource for any researcher student or professional economist working on consumer behavior or demand theory as well as investors and policymakers concerned with the impact of economic fluctuations

Deregulatory Takings and the Regulatory Contract J. Gregory Sidak, Daniel F. Spulber, 1997-11-28 This 1998 book addresses deregulatory policies termed deregulatory takings that threaten private property in network industries without compensation

Liberalization and Regulation of the Telecommunications Sector in Transition Countries Ekaterina Markova, 2008-11-14 Telecommunications are increasingly recognized as a key component in the infrastructure of economic development For many years there were state owned monopolies in the telecommunications sector In transition economies they were characterized by especially poor performance and high access deficits as telecommunications were considered to be a non profit oriented production process intended to support the socio economic superstructures As a result the starting point for the reform processes in transition countries was quite poor performed public monopolies functioned under completely different circumstances as the peers in the market economies The main question of this book is what the strategies for the successful future development of the telecommunications sector in transition countries are The special focus is on Russia the largest of the transition countries

Frontiers of Broadband, Electronic and Mobile Commerce Russel Cooper, Gary Madden, 2012-12-06 Russel Cooper and Gary Madden The present volume analyses the frontiers of broadband electronic and mobile commerce markets High capacity and intelligent mobile telecommunication networks have resulted in new services such as SMS and Internet banking Growth in mobile Internet network infrastructure and subscription has provided a base for the development of e commerce Accordingly recent research on broadband networks is forward looking e.g forecasting Internet telephony adoption and the structure of future retail markets The broadband regime brings with it concerns of identifying appropriate standards and delivery for universal service

Regulation and pricing are matters of importance as well as appropriate investment decisions within a market of ongoing innovation. The volume is divided in five parts: e-commerce business models, network technology and productivity, demand and pricing, market growth, regulation and investment, and issues related to the development imperative. The structure of the volume is guided by the basic themes considered at the International Telecommunications Society's Asia Australasian Regional Conference, McBusiness: E-commerce and the Impact of Broadband on regional Development and Business Prospects, which took place in Perth, Western Australia, on 22-24 June 2003. The volume contains a selection of papers presented at this conference as well as four additional invited papers commissioned to augment the volume. The invited papers are authored by Jerry Hausman (Chapter 1), Jeffery Bernstein and Charles Zarkadas (Chapter 6), M. Ishaq Nadiri and Banani Nandi (Chapter 8), and Glenn Woroch (Chapter 13).

Big Data: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2016-04-20. The digital age has presented an exponential growth in the amount of data available to individuals looking to draw conclusions based on given or collected information across industries. Challenges associated with the analysis, security, sharing, storage, and visualization of large and complex data sets continue to plague data scientists and analysts alike as traditional data processing applications struggle to adequately manage big data. *Big Data: Concepts, Methodologies, Tools, and Applications* is a multi-volume compendium of research-based perspectives and solutions within the realm of large-scale and complex data sets. Taking a multidisciplinary approach, this publication presents exhaustive coverage of crucial topics in the field of big data, including diverse applications, storage solutions, analysis techniques, and methods for searching and transferring large data sets, in addition to security issues. Emphasizing essential research in the field of data science, this publication is an ideal reference source for data analysts, IT professionals, researchers, and academics.

Foreign Investment in American Telecommunications J. Gregory Sidak, 2008-04-15. Restrictions on foreign investment in U.S. telecommunications firms have harmed the interests of American consumers and investors, argues J. Gregory Sidak in this convincing study. Sidak shows why these restrictions, originally intended to protect America from the perils of wireless telegraphy by foreign agents, should be repealed. Basing his analysis on legislative history, statutory and constitutional interpretation, and finance and trade theory, Sidak shows that these restrictions no longer serve their national security purpose if they ever did. Instead, they deny American consumers lower prices and more robust innovation, hamper access of American investors to foreign telecommunications markets, and unconstitutionally impinge on freedom of speech. Sidak's study encompasses the Telecommunications Act of 1996, recent global mergers such as British Telecom-MCI, and the 1997 World Trade Organization agreement to liberalize trade in telecommunications services.

Broadband Robert W. Crandall, James H. Alaman, 2004-05-13. There is widespread concern in the telecommunications industry that public policy may be impeding the continued development of the Internet into a high-speed communications network. In the absence of ubiquitous high-speed broadband Internet connections for residential and small business customers, the demand for IT

equipment and new Internet service applications may stagnate Broadband policy is controversial in large part because of the differences in the regulatory regimes faced by different types of carriers Cable television companies face neither retail price regulation of their cable modem services nor any requirements to make their facilities available to competitors Local telephone companies on the other hand face both retail price regulation for their DSL service and a requirement imposed by the 1996 Telecommunications Act that they unbundle their network facilities and lease them to rivals Finally new entrants are largely unregulated but many rely on facilities leased from the incumbent telephone companies at regulated rates to connect to their customers This asymmetric regulation is the focus of this volume in which telecommunications scholars address the public policy issues that have arisen over the deployment of new high speed telecommunications services Robert W Crandall is a senior fellow in the Economic Studies program at the Brookings Institution His previous books include with Martin Cave Telecommunications Liberalization on Two Sides of the Atlantic 2001 and with Leonard Waverman Who Pays for Universal Service Brookings 2000 James H Alleman is an associate professor in interdisciplinary telecommunications at the College of Engineering and Applied Science University of Colorado on leave at Columbia University

Governance of Communication Networks Brigitte Preissl, Jürgen Müller, 2007-01-30 Few would doubt the potential of information technology to connect individuals firms and organisations Whether this will actually lead to the integration of markets and societies is a different issue The articles collected in this book shed light on crucial considerations for the success of global communication networks These include frameworks for regulation inclusion of customers in defining product and service strategies access to advanced technology and networks for all groups and more

The Economics of Telecommunications Systems Noel D. Uri, 2004 The process of formulating and implementing telecommunications policy in the United States often seems chaotic and disorganised with overlapping responsibility and frequent conflicts among federal and state regulators Congress the Administration and the Federal judiciary There has never been a consensus on what should change and what should remain unaltered Telecommunications policy has evolved gradually over a relatively long period of time resulting in a cumulative major transformation It is still tied however to the Communications Act of 1934 Actions have been taken that have gradually moved policy from traditional public utility regulation of a monopoly to greater reliance on market forces and encouragement of competition The policies are an amalgam incorporating elements from a wide range of political and economic views There is nothing endemic in this transformation process to guarantee that the resulting policies have led to greater economic efficiency or that they are better in some subjective sense than alternatives that are available policies that have been implemented in order to evaluate their impact An objective evaluation of the impact of a policy affords an opportunity to make adjustments to it based on the realised economic consequences This approach to policy making can be looked upon as a learning by doing exercise In this book a number of objective studies based on data from various telecommunications systems are presented These studies discuss and evaluate policies that have been implemented In a

number of instances the policies have been misguided Recommendations to correct the most egregious problems are offered

Global Information Technology Report 2008-2009 Soumitra Dutta, 2009 *FCC Record* United States. Federal Communications Commission, 1999 *Forecasting the Internet* David G. Loomis, L.D. Taylor, 2012-12-06 David O Loomis Illinois State University

The explosive growth of the Internet has caught most industry experts off guard While data communications was expected to be the wave of the future few industry observers foresaw how rapid the change in focus from voice communications towards data would be Understanding the data communications revolution has become an urgent priority for many in the telecommunications industry Demand analysis and forecasting are critical tools to understanding these trends for both Internet access and Internet backbone service Businesses have led residential customers in the demand for data services but residential demand is currently increasing exponentially Even as business demand for data communications is becoming better understood residential broadband access demand is still largely unexplored Cable modems and ADSL appear to be the current residential broadband choices yet demand elasticities and econometric model based forecasts for these services are not currently available The responsiveness of customers to price and income changes and customer s perceptions of the tradeoff in product characteristics between cable modems and ADSL is largely unknown Demand for Internet access is derived from the demand for applications which utilize this access access is not demanded independent of its usage Thus it is important to understand Internet applications in order to understand the demand for access
