Hobrock, 2019-12-06 This book first published in 1992 equips library managers in all types of libraries to make the administrative changes necessary to deal with new information technologies Despite financial difficulties due to inflation and declining budgets electronic optical information formats and the hardware and software to support them are a reality for many libraries Libraries are designing and implementing prototypes of the electronic library and are introducing new technologies as a growing adjunct to traditional text formats and services It analyses administrative adjustments to the new technological information culture Chapters in this resource that deal with issues not easily grasped by non computing specialists are distilled to basic components making them easy for busy managers to comprehend and immediately useful to library administrators **Small Public Library Management** Jane Pearlmuter, Paul Nelson, 2012 Finally here is a handbook that includes everything administrators need to keep a handle on library operations freeing them up to streamline and improve how the organization functions Facility and Telecommunications Needs of Tribally Controlled Community Colleges United States. Congress. Senate. Committee on Indian Affairs (1993-), 1994 **Mobile Agents For Telecommunications Applications: Proceedings Of The First International Workshop** Ahmed Karmouch, Roger Impey, 1999-09-24 A software agent has a spectrum of definitions At one end of the scale are relatively simple client based software applications that can assist users in performing mundane tasks such as sorting e mail or downloading web pages

This class of agents is often referred to as personal assistant agents. At the other end of the scale is the concept of sophisticated software entities possessing artificial intelligence that autonomously travel through a network environment and make complex decisions on a user's behalf. In telecommunications, the definition lies somewhere between those two extremes. This classification of mobile agents, although not strictly adhering to the definition of intelligent agents originally proposed by the artificial intelligence community, is generally acknowledged to be a useful categorization and has started to gain widespread acceptance. We therefore define a mobile agent as a program that acts on behalf of a user or another program and is able to migrate from host to host on a network under its own control. The agent chooses when and where it will migrate and may interrupt its own execution and continue elsewhere on the network. The agent returns results and messages in an asynchronous fashion. This volume discusses the emerging field of mobile software agents and their applications to the area of telecommunications such as active networks, e-commerce, the Internet, interactive QoS, network management, and feature interactions. It addresses the needs of a wide audience including researchers, software agent systems, and telecommunication applications designers and users of software agents.
