Telenursing Nursing Practice In Cyberspace:

Telenursing Charles C. Sharpe, 2000-11-30 This is the first book to explore this emergent role of the nursing profession. It examines the unique legal regulatory and professional issues this neoteric mode of nursing practice presents. Telenursing as a subset of telehealth is defined and a review of its history, present status and future in the U.S. health care system is discussed. Concomitant legal accountability and risk for malpractice liability are examined. Risk management strategies and survival tactics in the event of a lawsuit are presented, particularly the legal significance of and essential need for defensive nursing documentation. A brief overview of malpractice law is provided and the essentials of requisite malpractice insurance for the telenurse practitioner are outlined. The book also addresses a number of other professional regulatory and licensure issues, particularly the contentious issue of multistate licensing and the various models to facilitate it that are being offered and rejected by nursing organizations and associations. The anticipated changes in our health care delivery system that will be engendered by breakthroughs in science and technology are described. The implications of such changes for patients as consumers of health care are analyzed, particularly the privacy and confidentiality of electronic medical records.

Telenursing Sajeesh Kumar, Helen Snooks, 2011-07-09 Written by experts from around the globe (USA, Europe, Australia and Asia), this book explains technical issues, digital information processing and collective experiences from practitioners in different parts of the world practicing a wide range of telenursing applications, including telenursing research by professionals in the field. This book lays the foundations for the globalisation of telenursing procedures, making it possible to know that a nursing service could perform on a patient anywhere in the world.

Health Informatics Hironobu Matsushita, 2020-09-14 This book is the first to approach healthcare informatics from the perspective of innovation. Drawing on the unique pairing of information and innovation, it offers an analysis to help readers rethink information technology, knowledge management, interprofessional collaboration and the generation of wisdom in the context of healthcare. The concept of translational research stems from the medical and health sciences and features bidirectional and recursive information generation processes involving bed to bench and bench to bed approaches. Based partly on this translational systems science, has become a new trend within systems sciences motivated by the need for practical applications that help people by offering holistic systems solutions for complex ideas. Today numerous innovations are emerging in diversified clinical practices and there has been a remarkable convergence of new technologies in disciplines like genome therapy, immunotherapy, iPS cells, imaging, diagnosis, personalized medicine, molecular targeted drugs, surgical robots and remote nursing. Innovation is also occurring in health management fields including health records, insurance reimbursement methods, quality control and safety. In these areas, big data and machine learning are accelerating innovation. Behind these innovations are the creation, sharing, bridging and translation of data, information, knowledge and wisdom, and as such health informatics is critical in promoting health innovations. The book explores the horizons of health informatics, introducing cutting edge

practical cases and theoretical frameworks including but not limited to fields such as big data machine learning drug discovery interprofessional collaboration electronic health records robotics telenursing quality improvement and safety
