The Analysis of Cross-classified Data Having Ordered Categories Leo A. Goodman, Clifford C. Clogg, 1984 **The Analysis of Cross-classified Data Having Ordered Categories** Leo A. Goodman, Clifford C. Clogg, 1984 *Analysis of Ordinal Categorical Data* Alan Agresti, 2012-07-02 Statistical science's first coordinated manual of methods for analyzing ordered categorical data now fully revised and updated continues to present applications and case studies in fields as diverse as sociology public health ecology marketing and pharmacy *Analysis of Ordinal Categorical Data* Second Edition provides an introduction to basic descriptive and inferential methods for categorical data giving thorough coverage of new developments and recent methods Special emphasis is placed on interpretation and application of methods including an integrated comparison of the available strategies for analyzing ordinal data Practitioners of statistics in government industry particularly pharmaceutical and academia will want this new edition *Contingency Table Analysis* Maria Kateri, 2014-05-17 Contingency tables arise in diverse fields including life sciences education social and political sciences notably market research and opinion surveys Their analysis plays an essential role in gaining insight into structures of the quantities under consideration and in supporting decision making Combining both theory and applications this book presents models and methods for the analysis of two and multidimensional contingency tables An excellent reference for advanced undergraduates graduate students and practitioners in statistics as well as biosciences social sciences education and economics the work may also be used as a textbook for a course on categorical data analysis Prerequisites include basic background on statistical inference and knowledge of statistical software packages Multiway Contingency Tables Analysis for the Social Sciences Thomas D. Wickens, 2014-02-25 This book describes the principles and techniques needed to analyze data that form a multiway contingency table Wickens discusses the description of association in such data using log linear and log multiplicative models and defines how the presence of association is tested using hypotheses of independence and quasi independence The application of the procedures to real data is then detailed This volume does not presuppose prior experience or knowledge of statistics beyond basic courses in fundamentals of probability and statistical inference It serves as an ideal reference for professionals or as a textbook for graduate or advanced undergraduate students involved in statistics in the social sciences *Topics in Statistical Dependence* Henry W. Block, Allan R. Sampson, Thomas H. Savits, 1990

Categorical Data Analysis With Sas and Spss Applications Bayo Lawal, H. Bayo Lawal, 2003-10-17 This book covers the fundamental aspects of categorical data analysis with an emphasis on how to implement the models used in the book using SAS and SPSS This is accomplished through the frequent use of examples with relevant codes and instructions that are closely related to the problems in the text Concepts are explained in detail so that students can reproduce similar results on their own Beginning with chapter two exercises at the end of each chapter further strengthen students understanding of the concepts by requiring them to apply some of the ideas expressed in the text in a more advanced capacity Most of these

exercises require intensive use of PC based statistical software Numerous tables with results of analyses including interpretations of the results further strengthen students understanding of the material Categorical Data Analysis With SAS R and SPSS Applications features detailed programs and outputs of all examples illustrated in the book using SAS R 8 02 and SPSS on the book s CD detailed coverage of topics often ignored in other books such as one way classification ch 3 the analysis of doubly classified data ch 11 and generalized estimating equations ch 12 and coverage of SAS R PROC FREQ GENMOD LOGISTIC PROBIT and CATMOD as well as SPSS PROC CROSSTABS GENLOG LOGLINEAR PROBIT LOGISTIC NUMREG and PLUM This book is ideal for upper level undergraduate or graduate level courses on categorical data analysis taught in departments of biostatistics statistics epidemiology psychology sociology political science and education A prerequisite of one year of calculus and statistics is recommended The book has been class tested by graduate students in the department of biometry and epidemiology at the Medical University of South Carolina

Social Stratification Roxanne Connelly, Vernon Gayle, 2016-04-01 Research into social stratification and social divisions has always been a central component of sociological study This volume brings together a range of thematically organised case studies comprising empirical and methodological analyses addressing the challenges of studying trends and processes in social stratification This collection has four themes The first concerns the measurement of social stratification since the problem of relating concepts measurements and operationalizations continues to cause difficulties for sociological analysis This book clarifies the appropriate deployment of existing measurement options and presents new empirical strategies of measurement and interpretation The conception of the life course and individual social biography is very popular in modern sociology The second theme of this volume exploits the contemporary expansion of micro level longitudinal data and the analytical approaches available to researchers to exploit such records It comprises chapters which exemplify innovative empirical analysis of life course processes in a longitudinal context thus offering an advance on previous sociological accounts concerned with longitudinal trends and processes The third theme of the book concerns the interrelationship between contemporary demographic institutional and socioeconomic transformations and structures of social inequality Although the role of wider social changes is rarely neglected in sociological reviews such changes continue to raise analytical challenges for any assessment of empirical differences and trends The fourth theme of the book discusses selected features of policy and political responses to social stratification This volume will be of interest to students academics and policy experts working in the field of social stratification

Research Methods in Social Network Analysis Linton C. Freeman, 2017-07-28 Since the publication of Herbert Spencer s Principles of Sociology in 1875 the use of social structure as a defining concept has produced a large body of creative speculations insights and intuitions about social life However writers in this tradition do not always provide the sorts of formal definitions and propositions that are the building blocks of modern social research In its broad ranging examination of the kind of data that form the basis for the systematic study of social structure Research

Methods in Social Network Analysis marks a significant methodological advance in network studies As used in this volume social structure refers to a bundle of intuitive natural language ideas and concepts about patterning in social relationships among people In contrast social networks is used to refer to a collection of precise analytic and methodological concepts and procedures that facilitate the collection of data and the systematic study of such patterning Accordingly the book's five sections are arranged to address analytical problems in a series of logically ordered stages or processes The major contributors define the fundamental modes by which social structural phenomena are to be represented how boundaries to a social structure are set how the relations of a network are measured in terms of structure and content the ways in which the relational structure of a network affects system actors and how actors within a social network are clustered into cliques or groups The chapters in the last section build on solutions to problems proposed in the previous sections This highly unified approach to research design combined with a representative diversity of viewpoints makes Research Methods in Social Network Analysis a state of the art volume

The SAGE Encyclopedia of Social Science Research Methods Michael Lewis-Beck, Alan E Bryman, Tim Futing Liao, 2004 This defining work will be valuable to readers and researchers in social sciences and humanities at all academic levels As a teaching resource it will be useful to instructors and students alike and will become a standard reference source Essential for general and academic collections CHOICE Appreciative users of this volume will be students faculty and researchers in academic special and large public libraries for whom it is recommended LIBRARY JOURNALS SAGE Reference is proud to announce The SAGE Encyclopedia of Social Science Research Methods a three volume resource that is a first of its kind developed by the leading publisher of social science research methods books and journals This unique multi volume reference set offers readers an all encompassing education in the ways of social science researchers Written to be accessible to general readers entries do not require any advanced knowledge or experience to understand the purposes and basic principles of any of the methods The Encyclopedia features two major types of entries definitions consisting of a paragraph or two provide a quick explanation of a methodological term and topical treatments or essays discussing the nature history application example and implication of using a certain method Also included are suggested readings and references for future study To help provide a more complete explanation than is often achieved within the scope of a single article key terms and concepts appear in SMALL CAPITAL LETTERS to refer readers to related terms explained elsewhere In addition to epistemological issues that influence the nature of research questions and assumptions The SAGE Encyclopedia of Social Science Research Methods tackles topics not normally viewed as part of social science research methodology from philosophical issues such as poststructuralism to advanced statistical techniques In covering the full range of qualitative and quantitative data analyses this key reference offers an integrated approach that allows the reader to choose the most appropriate and robust techniques to apply to each situation Many entries treat traditional topics in a novel way stimulating both interest and new perspectives One example is the entry Econometrics by

Professor Damodar Gujarati Following a process which many educators preach but seldom practice Gujarati walks the reader twice through the research process from economic theory to data and models to analysis once in principle and a second time with an example In using the ordinary process of economic research to achieve an extraordinary impact he leaves the reader thinking not only about methods and models but also the fundamental purpose of econometrics Topics Covered Analysis of Variance Association and Correlation Basic Qualitative Research Basic Statistics Causal Modeling Structural Equations Discourse Conversation Analysis Econometrics Epistemology Ethnography Evaluation Event History Analysis Experimental Design Factor Analysis Related Techniques Feminist Methodology Generalized Linear Models Historical Comparative Interviewing in Qualitative Research Latent Variable Model Life History Biography Loglinear Models Categorical Dependent Variables Longitudinal Analysis Mathematics and Formal Models Measurement Level Measurement Testing Classification Multiple Regression Multilevel Analysis Qualitative Data Analysis Sampling in Surveys Sampling in Qualitative Research Scaling Significance Testing Simple Regression Survey Design Time Series Key Features Over 900 entries arranged A to Z Each entry is written by a leading authority in the field covering both quantitative and qualitative methods Covers all disciplines within the social sciences Contains both concise definitions and in depth essays Three volumes and more than 1500 pages *Handbook of Statistical Modeling for the Social and Behavioral Sciences* G. Arminger, Clifford C. Clogg, M.E. Sobel, 2013-06-29 Contributors thoroughly survey the most important statistical models used in empirical research in the social and behavioral sciences Following a common format each chapter introduces a model illustrates the types of problems and data for which the model is best used provides numerous examples that draw upon familiar models or procedures and includes material on software that can be used to estimate the models studied This handbook will aid researchers methodologists graduate students and statisticians to understand and resolve common modeling problems

Multidimensional Models of Perception and Cognition F. Gregory Ashby, 2014-02-04 The mental representations of perceptual and cognitive stimuli vary on many dimensions In addition because of quantal fluctuations in the stimulus spontaneous neural activity and fluctuations in arousal and attentiveness mental events are characterized by an inherent variability During the last several years a number of models and theories have been developed that explicitly assume the appropriate mental representation is both multidimensional and probabilistic This new approach has the potential to revolutionize the study of perception and cognition in the same way that signal detection theory revolutionized the study of psychophysics This unique volume is the first to critically survey this important new area of research Longitudinal Categorical Data Analysis Brajendra C. Sutradhar, 2014-10-30 This is the first book in longitudinal categorical data analysis with parametric correlation models developed based on dynamic relationships among repeated categorical responses This book is a natural generalization of the longitudinal binary data analysis to the multinomial data setup with more than two categories Thus unlike the existing books on cross sectional categorical data analysis using log linear models this book uses

multinomial probability models both in cross sectional and longitudinal setups A theoretical foundation is provided for the analysis of univariate multinomial responses by developing models systematically for the cases with no covariates as well as categorical covariates both in cross sectional and longitudinal setups In the longitudinal setup both stationary and non stationary covariates are considered These models have also been extended to the bivariate multinomial setup along with suitable covariates For the inferences the book uses the generalized quasi likelihood as well as the exact likelihood approaches The book is technically rigorous and it also presents illustrations of the statistical analysis of various real life data involving univariate multinomial responses both in cross sectional and longitudinal setups This book is written mainly for the graduate students and researchers in statistics and social sciences among other applied statistics research areas However the rest of the book specifically the chapters from 1 to 3 may also be used for a senior undergraduate course in statistics

Applied Latent Class Analysis
 Jacques A. Hagenaars, Allan L. McCutcheon, 2002-06-24 Applied Latent Class Analysis introduces several innovations in latent class analysis to a wider audience of researchers Many of the world's leading innovators in the field of latent class analysis contributed essays to this volume each presenting a key innovation to the basic latent class model and illustrating how it can prove useful in situations typically encountered in actual research

Doubly Classified Model with R Teck Kiang Tan, 2017-11-11 This book provides practical applications of doubly classified models by using R syntax to generate the models It also presents these models in symbolic tables so as to cater to those who are not mathematically inclined while numerous examples throughout the book illustrate the concepts and their applications For those who are not aware of this modeling approach it serves as a good starting point to acquire a basic understanding of doubly classified models It is also a valuable resource for academics postgraduate students undergraduates data analysts and researchers who are interested in examining square contingency tables

The SAGE Handbook of Quantitative Methods in Psychology Roger E Millsap, Alberto Maydeu-Olivares, 2009-07-23 I often wonder to myself whether the field needs another book handbook or encyclopedia on this topic In this case I think that the answer is truly yes The handbook is well focused on important issues in the field and the chapters are written by recognized authorities in their fields The book should appeal to anyone who wants an understanding of important topics that frequently go uncovered in graduate education in psychology David C Howell Professor Emeritus University of Vermont Quantitative psychology is arguably one of the oldest disciplines within the field of psychology and nearly all psychologists are exposed to quantitative psychology in some form While textbooks in statistics research methods and psychological measurement exist none offer a unified treatment of quantitative psychology The SAGE Handbook of Quantitative Methods in Psychology does just that Each chapter covers a methodological topic with equal attention paid to established theory and the challenges facing methodologists as they address new research questions using that particular methodology The reader will come away from each chapter with a greater understanding of the methodology being addressed as well as an understanding of the directions for future developments within that methodological area Drawing on a global scholarship the Handbook is divided into seven parts Part One Design and Inference addresses issues in the inference of causal relations from experimental and non experimental research along with the design of true experiments and quasi experiments and the problem of missing data due to various influences such as attrition or non compliance Part Two Measurement Theory begins with a chapter on classical test theory followed by the common factor analysis model as a model for psychological measurement The models for continuous latent variables in item response theory are covered next followed by a chapter on discrete latent variable models as represented in latent class analysis Part Three Scaling Methods covers metric and non metric scaling methods as developed in multidimensional scaling followed by consideration of the scaling of discrete measures as found in dual scaling and correspondence analysis Models for preference data such as those

found in random utility theory are covered next Part Four Data Analysis includes chapters on regression models categorical data analysis multilevel or hierarchical models resampling methods robust data analysis meta analysis Bayesian data analysis and cluster analysis Part Five Structural Equation Models addresses topics in general structural equation modeling nonlinear structural equation models mixture models and multilevel structural equation models Part Six Longitudinal Models covers the analysis of longitudinal data via mixed modeling time series analysis and event history analysis Part Seven Specialized Models covers specific topics including the analysis of neuro imaging data and functional data analysis Advances in GLIM and Statistical Modelling Ludwig Fahrmeir, Brian Francis, Robert Gilchrist, Gerhard Tutz, 2012-12-06 This volume presents the published Proceedings of the joint meeting of GUM92 and the 7th International Workshop on Statistical Modelling held in Munich Germany from 13 to 17 July 1992 The meeting aimed to bring together researchers interested in the development and applications of generalized linear modelling in GUM and those interested in statistical modelling in its widest sense This joint meeting built upon the success of previous workshops and GUM conferences Previous GUM conferences were held in London and Lancaster and a joint GUM Conference 4th Modelling Workshop was held in Trento The Proceedings of previous GUM conferences Statistical Modelling Workshops are available as numbers 14 32 and 57 of the Springer Verlag series of Lecture Notes in Statistics Workshops have been organized in Innsbruck Perugia Vienna Toulouse and Utrecht Proceedings of the Toulouse Workshop appear as numbers 3 and 4 of volume 13 of the journal Computational Statistics and Data Analysis Much statistical modelling is carried out using GUM as is apparent from many of the papers in these Proceedings Thus the Programme Committee were also keen on encouraging papers which addressed problems which are not only of practical importance but which are also relevant to GUM or other software development The Programme Committee requested both theoretical and applied papers Thus there are papers in a wide range of practical areas such as ecology breast cancer remission and diabetes mortality banking and insurance quality control social mobility organizational behaviour

Generating Social Stratification Alan C Kerckhoff, 2018-03-05 In this book some of the leading stratification scholars in the U S present empirical and theoretical essays about the institutional contexts that shape careers Building on recent advances in theory data and analytic technique the essays in this volume work toward the goal of identifying and assessing the processes by which a birth cohort is distributed in the stratification system given their positions of origin in that system Alan Kerckhoff's introduction situates the studies in this volume within the context of previous stratification research over several generations making the book an invaluable resource for scholars and graduate students
