skill building activities *Integrating Touch-Enabled and Mobile Devices into Contemporary Mathematics Education*
Meletiou-Mavrotheris, Maria, Mavrou, Katerina, Paparistodemou, Efi, 2015-07-13 Despite increased interest in mobile devices as learning tools the amount of available primary research studies on their integration into mathematics teaching and learning is still relatively small due to the novelty of these technologies Integrating Touch Enabled and Mobile Devices into Contemporary Mathematics Education presents the best practices in mathematics education research and teaching practice by providing an account of current and future trends and issues in mobile mathematics learning and associated technologies and educational methodologies This edited volume approaches a broad audience including researchers and practitioners interested in the exploitation of mobile technologies in mathematics teaching and learning as well as mathematics teachers at all levels This premier reference source compiles the best practices and recommended processes for effectively utilizing the vast capabilities of mobile technologies in the mathematics classroom through a collection of chapters covering topics including but not limited to touch enabled virtual mapping perceptual learning technologies mobile teaching statistics apps for mobile devices smartphones for the visually impaired pedagogical and instructional design and touch screen interfaces in algebraic instruction Enabling Environments Edward Steinfeld, G. Scott Danford, 2013-06-29 This volume is the first effort to compile representative work in the emerging research area on the relationship of disability and physical environment since Barrier Free Environments edited by Michael Bednar was published in 1977 Since that time disability rights legislation like the Americans with Disabilities Act in the United States the worldwide growth of the independent living movement rapid deinstitutionalization and the maturation of functional assessment methodology have all had their impact on this research area The impact has been most noticeable in two ways fostering the integration of environmental variables in rehabilitation research and practice and changing paradigms for environmental interventions As the contributions in this volume demonstrate the relationship of disability and physical environment is no longer of interest primarily to designers and other professionals concerned with managing the resources of the built environment The physical environment has always been recognized as an important variable affecting rehabilitation outcome Until recently however concepts and tools were not available to measure its impact in clinical practice and outcomes research In particular lack of a theoretical foundation that integrated environment with the disablement process hampered development of both research and clinical methodology Thus the physical environment received little attention from the mainstream rehabilitation research community However this situation is changing rapidly **Journal of Visual Impairment & Blindness** ,2002-07
