Mirror Worlds David Gelernter, 1993-01-28 Technology doesn't flow smoothly it's the big surprises that matter and Yale computer expert David Gelernter sees one such giant leap right on the horizon Today's small scale software programs are about to be joined by vast public software works that will revolutionize computing and transform society as a whole One such vast program is the Mirror World Imagine looking at your computer screen and seeing reality an image of your city for instance complete with moving traffic patterns or a picture that sketches the state of an entire far flung corporation at this second These representations are called Mirror Worlds and according to Gelernter they will soon be available to everyone Mirror Worlds are high tech voodoo dolls by interacting with the images you interact with reality Indeed Mirror Worlds will revolutionize the use of computers transforming them from mere handy tools to crystal balls which will allow us to see the world more vividly and see into it more deeply Reality will be replaced gradually piece by piece by a software imitation we will live inside the imitation and the surprising thing is this will be a great humanistic advance We gain control over our world plus a huge new measure of insight and vision In this

fascinating book part speculation part explanation Gelernter takes us on a tour of the computer technology of the near future Mirror Worlds he contends will allow us to explore the world in unprecedented depth and detail without ever changing out of our pajamas A hospital administrator might wander through an entire medical complex via a desktop computer Any citizen might explore the performance of the local schools chat electronically with teachers and other Mirror World visitors plant software agents to report back on interesting topics decide to run for the local school board hire a campaign manager and conduct the better part of the campaign itself all by interacting with the Mirror World Gelernter doesn't just speculate about how this amazing new software will be used he shows us how it will be made explaining carefully and in detail how to build a Mirror World using technology already available We learn about disembodied machines trellises ensembles and other computer components which sound obscure but which Gelernter explains using familiar metaphors and terms He tells us that a Mirror World is a microcosm just like a Japanese garden or a Gothic cathedral and that a computer program is translated by the computer in the same way a symphony is translated by a violinist into music Mirror Worlds offers a lucid and humanistic account of the coming software revolution told by a computer scientist at the cutting edge of his field

A Collection of Words Dustin Carr,2012-05-29 This book contains a mere collection of poetry letters and other works that have been compiled over time The author has written over time based on circumstance and feeling You will find that some of the pieces of works are dated and others are not never fear all that means is that the time was never recorded or simply the original was lost and I found a copy If there are any other dated pieces of works that are especially vague that just means that it was not labeled but I knew the general date when I wrote it Please keep in mind that the names have been changed to protect both myself and who they are written to for or about You may find some opinionated text about certain parties but such is the nature of the text that it is in There is not much else to say but the fact that as you read this book I hope you enjoy my life my thoughts my feelings but most of all I hope you enjoy the beautiful art of creative writing
