Small Miracles A. C. "Pete" Peters, 2007-06 What Christian hasn't questioned their faith in God at some point during their lives Most people accept their faith blindly as children due to parental influence and Pete Peters was no exception An automobile accident at age sixteen changed everything Peters was speeding in a hilly area when his 1951 Ford convertible careened off a steep cliff and crashed one hundred feet below causing his younger brother David to suffer fatal injuries And so began Peters first question How can there be a God that allows innocent people to suffer and die for no reason In later years he witnessed family trauma senseless war famine two divorces and other atrocities From his point of view there was no God to care A self proclaimed intellectual atheist Peters still read about and discussed faith and over the years devoted much thought as to why he felt God logically could not exist After many small miracles eventually occur in his life Peters finally realizes that faith is a gift that is only given to those ready to accept it Peters tells his story in such a compelling and personal way that he will help anyone who is spiritually confused find their way back to God

Miracles and Machines Elizabeth King,W. David Todd,2023-08-15 An abundantly illustrated narrative that draws from the history of art science technology artificial intelligence psychology religion and conservation in telling the extraordinary story of a Renaissance robot that prays This volume tells the singular story of an uncanny rare object at the cusp of art and science a 450 year old automaton known as the monk The walking gesticulating figure of a friar in the collection of the Smithsonian Institution s National Museum of American History is among the earliest extant ancestors of the self propelled robot According to legend connected to the court of Philip II of Spain the monk represents a portrait of Diego de Alcal a humble Franciscan lay brother whose holy corpse was said to be agent to the miraculous cure of Spain s crown prince as he lay dying in 1562 In tracking the origins of the monk and its legend the authors visited archives libraries and museums across the United States and Europe probing the paradox of a mechanical object performing an apparently spiritual act They identified seven kindred automata from the same period which they argue form a paradigmatic class of walking prime movers unprecedented in their combination of visual and functional realism While most of the literature on automata focuses on the Enlightenment this enthralling narrative journeys back to the late Renaissance when clockwork machinery was entirely new foretelling the evolution of artificial life to come

Unorthodox Humeanism Georg Sparber,2013-05-02 The book discusses contemporary metaphysics of science and deals with the central question which ontology fits best with our knowledge of the world Two competing positions in today s metaphysics of science are analysed Humeanism and dispositionalism There are physical and metaphysical arguments to show that orthodox Humeanism is in trouble The unorthodox metaphysical turn consists in taking the fundamental properties to be relations rather than intrinsic properties The book spells out in detail what an unorthodox version of Humeanism amounts to and shows that in turning unorthodox Humeanism offers a competitive metaphysical framework for science without commitment to irreducible causation

Making Things Happen James Woodward,2005-10-27 In *Making Things Happen* James Woodward develops a new and ambitious comprehensive theory of causation and explanation that draws on literature from a variety of disciplines and which applies to a wide variety of claims in science and everyday life His theory is a manipulationist account proposing that causal and explanatory relationships are relationships that are potentially exploitable for purposes of manipulation and control This account has its roots in the commonsense idea that causes are means for bringing about effects but it also draws on a long tradition of work in experimental design econometrics and statistics Woodward shows how these ideas may be generalized to other areas of science from the social scientific and biomedical contexts for which they were originally designed He also provides philosophical foundations for the manipulationist approach drawing out its implications comparing it with alternative approaches and defending it from common criticisms In doing so he shows how the manipulationist account both illuminates important features of successful causal explanation in the natural and social sciences and avoids the counterexamples and difficulties that infect alternative approaches from the deductive nomological model onwards *Making Things Happen* will interest philosophers working in the philosophy of science the philosophy of social science and metaphysics and as well as anyone interested in causation explanation and scientific methodology

David Lewis Daniel Nolan,2015-01-30 David Lewis s work is of fundamental importance in many areas of philosophical inquiry and there are few areas of Anglo American philosophy where his impact has not been felt Lewis s philosophy also has a rare unity his views form a comprehensive philosophical system answering a broad range of questions in metaphysics philosophy of mind philosophy of language philosophy of action and many other areas This breadth of Lewis s work however has meant that it is difficult to know where to start in Lewis s work and a casual reader may often miss some of the illuminating connections between apparently quite disparate pieces of Lewis s work This book aims to make this body of work more accessible to a general philosophical readership while also providing a unified overview of the many contributions Lewis has made to contemporary Anglo American philosophy The book can be divided into four parts The first part examines Lewis s metaphysical picture one of the areas where he has had the greatest impact and also the framework for the rest of his theories The second section discusses Lewis s important contributions in the philosophy of mind language and meaning The third part explores some of Lewis s work in decision theory metaethics and applied ethics areas where his work is not necessarily as widely appreciated but in which he has done a range of work that is both accessible and important The final section focuses on Lewis s distinctive philosophical method perhaps one of his most significant legacies which combines naturalism with common sense theorizing

Carving Nature at Its Joints Joseph Keim Campbell,Michael O'Rourke,Matthew H. Slater,2011-10-28 Reflections on the metaphysics and epistemology of classification from a distinguished group of philosophers Contemporary discussions of the success of science often invoke an

ancient metaphor from Plato's Phaedrus successful theories should carve nature at its joints But is nature really jointed Are there natural kinds of things around which our theories cut The essays in this volume offer reflections by a distinguished group of philosophers on a series of intertwined issues in the metaphysics and epistemology of classification The contributors consider such topics as the relevance of natural kinds in inductive inference the role of natural kinds in natural laws the nature of fundamental properties the naturalness of boundaries the metaphysics and epistemology of biological kinds and the relevance of biological kinds to certain questions in ethics *Carving Nature at Its Joints* offers both breadth and thematic unity providing a sampling of state of the art work in contemporary analytic philosophy that will be of interest to a wide audience of scholars and students concerned with classification

The Metaphysics of Free Will John Martin Fischer, 1995-10-09 The Metaphysics of Free Will provides a thorough statement of the major grounds for skepticism about the reality of free will and moral responsibility The author identifies and explains the sort of control that is associated with personhood and accountability and shows how it is consistent with causal determinism In so doing our view of ourselves as morally responsible agents is protected against the disturbing changes posed by science and religion
