Non-Bayesian Decision Theory Martin Peterson, 2008-06-06 For quite some time philosophers economists and statisticians have endorsed a view on rational choice known as Bayesianism The work on this book has grown out of a feeling that the Bayesian view has come to dominate the academic community to such an extent that an alternative non Bayesian position is rarely researched Needless to say I think this is a pity Non Bayesian positions deserve to be examined with much greater care and the present work is an attempt to defend what I believe to be a coherent and reasonably detailed non Bayesian account of decision theory The main thesis I defend can be summarised as follows Rational agents maximise subjective expected utility but contrary to what is claimed by Bayesians utility and subjective probability should not be defined in terms of preferences over uncertain prospects On the contrary rational decision makers need only consider preferences over certain outcomes It will be shown that utility and probability functions derived in a non Bayesian manner can be used for generating preferences over uncertain prospects that support the principle of maximising subjective expected utility To some extent this non Bayesian view gives an account of what modern decision theory could have been like had decision theorists not entered the Bayesian path discovered by Ramsey de Finetti Savage and others I will not discuss all previous non Bayesian positions presented in the literature
