Borges, Huitao Li, C. Yan Cheng, 2024-07-10 Male fertility both resilient and fragile is heavily affected by external factors such as the environment drug use and eating habits in a similar way to a wall of stone that is constantly attacked and weathered to varying degrees The use of cancer drugs for instance may increase life expectancy and cure diseases but may also negatively affect male fertility A variety of factors complicate male infertility such as the intricate spermatogenesis process The available methods for diagnosis are limited not to mention treatment However some evidence showed that different reproductive physiologies may share some biological basis and thus molecular pathways such as mTOR which plays a role in testis physiology Sertoli cell function transcriptional and translational control of spermatogenesis as well as drug and environmental exposure Moreover male fertility can also reflect men's overall health and the likelihood of suffering from certain diseases suggesting that these events have common regulatory mechanisms This Research Topic aims to identify these potential shared mechanisms analyze and explore how environment disease drug use and nutritional supplements affect male fertility as well as reveal the seemingly chaotic but traceable phenomena It will be crucial for the development of diagnostics treatments and maintenance methods needed to enhance male fertility which is also the objective of this research topic This Research Topic encourages Original Research Reviews and other accepted article types including but not limited to Analyses of the possible effects of environmental pollutants brought about by industry and human activities such as endocrine disrupting chemicals EDCs on male reproduction Links between men's

overall health and fertility as well as andrological effects of various illnesses including infectious diseases deficiencies hereditary diseases and physiological disorders Effects of medications and dietary supplements on male reproductive systems such as those used for cancer treatment psychiatric disorders diabetes etc The use of herbal and medicinal remedies to prevent or reverse adverse andrological effects caused by putative toxic chemicals and diseases Specific molecular mechanisms and signalling pathways that affect spermatogenesis the testis and sperm function associated with the above 4 points Shared molecular mechanisms underlying both the generation and remission of male infertility disease
