Deng, Valérie Gauthier-Umaña, Martín Ochoa, Moti Yung, 2019-05-28 This book constitutes the refereed proceedings of the 17th International Conference on Applied Cryptography and Network Security ACNS 2019 held in Bogota Colombia in June 2019 The 29 revised full papers presented were carefully reviewed and selected from 111 submissions The papers were organized in topical sections named integrity and cryptanalysis digital signature and MAC software and systems security blockchain and cryptocurrency post quantum cryptography public key and commitment theory of cryptographic implementations and privacy preserving techniques The CHORCH Approach: How to Model B2Bi Choreographies for Orchestration Execution Andreas Schönberger, 2012 The establishment and implementation of cross organizational business processes is an implication of today s market pressure for efficiency gains In this context Business To Business integration B2Bi focuses on the information integration aspects of business processes A core task of B2Bi is providing adequate models that capture the message exchanges between integration partners Following the terminology used in the SOA domain such models will be called choreographies in the context of this work Despite the enormous economic importance of B2Bi existing choreography languages fall short of fulfilling all relevant requirements of B2Bi scenarios Dedicated B2Bi choreography standards allow for inconsistent outcomes of basic interactions and do not provide unambiguous semantics for advanced interaction models In contrast to this more formal or technical choreography languages may provide unambiguous modeling semantics but do not offer B2Bi domain concepts or an adequate level of abstraction Defining valid and complete B2Bi choreography models becomes a challenging task in the face of these shortcomings At the same time invalid or underspecified choreography definitions are particularly costly considering the organizational setting of B2Bi scenarios Models are not only needed to bridge the typical gap between business and IT but also as negotiation means among the

business users of the integration partners on the one hand and among the IT experts of the integration partners on the other. Misunderstandings between any two negotiation partners potentially affect the agreements between all other negotiation partners.
