Vision Based Mobile Robotics: mobile robot localization using vision sensors and active probabilistic approaches
Emanuele Frontoni, 2012-01-22 The use of vision in mobile robotics is one of the main goals of this thesis. In particular, novel appearance-based approaches for image matching metrics are introduced. These approaches are applied to the problem of mobile robot localization. Similarity measures between robot's views are used in probabilistic methods for robot pose estimation. In this field of probabilistic localization, active approaches are proposed, allowing the robot to faster and better localize. All methods have been extensively tested using a real robot in an indoor environment. Note: the book is the publication of the PhD thesis discussed in Università Politecnica delle Marche Ancona Italy in 2006 by Emanuele Frontoni.
