Abstract

Introduction: The aim of the study was to examine the relationships between sleep quality, sleepiness, fatigue, resilience, and attention parameters in a sample consisting of university students.

Material and methods: The study involved 123 university students aged between 18 and 33 years. A socio-demographic data form, the Pittsburgh Sleep Quality Index (PSQI), Epworth Sleepiness Scale (ESS), Fatigue Severity Scale (FSS), Depression, Anxiety, and Stress Scale (DASS-21), and the Brief Resilience Scale (BRS) were administered to the participants. Attention assessment was conducted using the Cognitron (COG), Signal Detection (SIGNAL), Inhibition (INHIB), and Perception and Attention Functions Battery, part of the computer-based Vienna Test System (VTS).

Results: Out of all the participants, 77.2% were female, and 22.8% were male, with an average age of 21.53 (SD = 2.54) years. A positive correlation was found between COG-Corrects and PSQI scores, and COG-Incorrects and DASS-Stress. There was a negative correlation between SIGNAL-Corrects and FSS. No correlation was revealed among sleep quality, sleepiness, fatigue, resilience variables, and reaction inhibition or divided attention. Furthermore, multiple regression analysis indicated that attention scores were predicted only by sleep quality and fatigue severity.

Conclusions: Based on the study's findings, it is conceivable that situational factors such as sleep quality, sleepiness, and fatigue have a more significant impact on attention compared with constant variables such as depression, anxiety, stress, and resilience.

Key words: Vienna Test System, attention, fatigue, sleepiness, resilience.

Introduction

Attention is a primary and complex cognitive function that refers to the frontage and focus of mental resources on a stimulus. Simultaneously, it represents turning towards a stimulus while disregarding others (Posner *et al.* 2016). Attention is separated into four types: selective, sustained, executive, and divided. Selective attention refers to the capacity to focus on a particular stimulus while disregarding other distracting stimuli. Divided attention is the ability to deal with multiple stimuli simultaneously, and executive attention ensures that attention is maintained (Rueda *et al.* 2023). Sustained attention requires long-term focus on a stimulus and is regarded as a concept associated with alertness (Cohen 2013). According to contemporary theories, attention is a system that consists of

multiple brain networks with interrelated but distinct functions (Fisher 2019). Spikman and van Zomeren (2010) stated that attention has two general dimensions, selectivity and intensity; they also refer in their articles to the Vienna Test System (VTS), which is a computer-based application used in the assessment of sustained attention, focused/selective attention, and divided attention (Spikman and van Zomeren 2010).

Although attention is a parameter that multiple psychological factors can impact, there has been more focus on how specific psychological processes such as sleep, fatigue, and psychopathological processes (e.g., depression, anxiety) affect attention. Sleep has a restorative function in human life and is essential for physiologic and circadian rhythms. Quantitative and qualitative shifts in sleep influence multiple systems (Bryant

of U.S. Department of Transportation efforts in the 1990s to address operator fatigue, 1999 During the 1980s the National Transportation Safety Board investigated several aviation highway and marine accidents that involved operator fatigue Following completion of these accident investigations the Safety Board in 1989 issued three recommendations to the U S Department of Transportation DOT addressing needed research education and revisions to hours of service regulations Ten years have passed since these safety recommendations were issued In the interim the Safety Board has issued more than 70 additional recommendations to the DOT States industry and industry associations to reduce the incidence of fatigue related accidents In response to the three 1989 recommendations the DOT and the modal administrations have in general acted and responded positively to the recommendations addressing research and education little action however has occurred with respect to revising the hours of service regulations Nevertheless the Safety Board believes that support has

grown in recent years to make substantive changes to these regulations This report provides an update on the activities and efforts by the DOT and the modal administrations to address operator fatigue and consequently the progress that has been made in the past 10 years to implement the actions called for in the three intermodal recommendations and other fatigue related recommendations The report also provides some background information on current hours of service regulations fatigue and the effects of fatigue on transportation safety As a result of this safety report the National Transportation Safety Board issued new safety recommendations to the U S Department of Transportation the Federal Aviation Administration the Federal Highway Administration the Federal Railroad Administration the Research and Special Programs Administration and the United States Coast Guard

Elements of Human Performance Andries F. Sanders,Andries Sanders,2013-02-01 This book presents a review of research on reaction processes and attention as it has evolved over the last 40 years in the context of the information processing tradition in cognitive psychology It is argued and demonstrated that issues of reaction processes and attention are closely interconnected Their common conceptualization can be seen in terms of limited processing capacity on the one hand and stage analysis on the other This volume concludes that at present a stage analysis metaphor offers better prospects as a conceptual starting point the limited capacity metaphor was strongly tied to the digital computers of the 60s The emphasis of the book is on behavioral research but summaries of related findings on evoked potentials and other psychophysiological variables are included as well From this perspective it may be of interest to neuropsychologists who want to learn about the present state of cognitive experimental paradigms *Elements of Human Performance* also addresses the question of the relationship between basic research and applications in the said areas This is particularly urgent in view of the now common notion that the results of many simplified laboratory tasks may be artifactual and of little applied value A back to back research strategy is outlined to assess the validity of basic research results for real life tasks

Aircraft Accident Report , *Elements of Human Performance* Andries Frans Sanders,1998 The book focuses on 2 aspects of human performance theory reaction processes and attention These aspects are often ignored by treatments of cognitive psychology but are central to understanding an individual s performance The U.S. Department of Transportation's Proposed Hours of Service Regulations for Motor Carriers United States. Neuroergonomics Raja Parasuraman, Matthew Rizzo, 2008-02-13 Neuroergonomics can be defined as the study of brain and behavior at work It combines two disciplines neuroscience the study of brain function and human factors the study of how to match technology with the capabilities and limitations of people so they can work effectively and safely The goal of merging these two fields is to use the startling discoveries of human brain and physiological functioning both to inform the design of technologies in the workplace and home and to provide new training methods that enhance performance expand capabilities and optimize the fit between people and technology Research in the area of neuroergonomics has blossomed in recent years with the emergence of noninvasive techniques for monitoring human brain function that can be used to study various aspects of human behavior in relation to technology and work including mental workload visual attention working memory motor control human automation interaction and adaptive automation This volume will provide the first systematic overview of this emerging area describing the theoretical background basic research major methods as well as the new and future areas of application This collection will benefit a number of readers the experienced researcher investigating related questions in human factors and cognitive neuroscience the student wishing to get a rapid but systematic overview of the field and the designer interested in novel approaches and new ideas for application Researchers in human factors and ergonomics neuroscience cognitive psychology medicine industrial engineering and computer science will find this volume most helpful

First, Do Less Harm Ross Koppel, Suzanne Gordon, 2012-04-23 Each year hospital acquired infections prescribing and treatment errors lost documents and test reports communication failures and other problems have caused thousands of deaths in the United States added millions of days to patients hospital stays and cost Americans tens of billions of dollars Despite and sometimes because of new medical information technology and numerous well intentioned initiatives to address these problems threats to patient safety remain and in some areas are on the rise In First Do Less Harm twelve health care professionals and researchers plus two former patients look at patient safety from a variety of perspectives finding many of the proposed solutions to be inadequate or impractical Several contributors to this book attribute the failure to confront patient safety concerns to the influence of the market model on medicine and emphasize the need for hospital wide teamwork and greater involvement from frontline workers from janitors and aides to nurses and physicians in planning implementing and evaluating effective safety initiatives Several chapters in First Do Less Harm focus on the critical role of interprofessional and occupational practice in patient safety Rather than focusing on the usual suspects physicians safety

champions or high level management these chapters expand the list of stakeholders and patient safety advocates to include nurses patient care assistants and other staff as well as the health care unions that may represent them First Do Less Harm also highlights workplace issues that negatively affect safety including sleeplessness excessive workloads outsourcing of hospital cleaning and lack of teamwork between physicians and other health care staff In two chapters experts explain why the promise of health care information technology to fix safety problems remains unrealized with examples that are at once humorous and frightening A book that will be required reading for physicians nurses hospital administrators public health officers quality and risk managers healthcare educators economists and policymakers First Do Less Harm concludes with a list of twenty seven paradoxes and challenges facing everyone interested in making care safe for both patients and those who care for them

Making Shiftwork Tolerable Timothy H. Monk, Simon Folkard, 2024-11-01 This text guides the reader through the many forms of shiftwork adopting a broad definition as being any regularly taken employment outside the day working window 06 00 to 18 00 This excellent guide introduces the many and varied forms of shiftwork adopting from the outset a broad definition of the term to embrace any regularly taken employment outside the day working window The authors both internationally recognised experts in the field describe in jargon free language the diverse experiences of shift workers and identify the problems associated with abnormal hours As shiftwork becomes more prevalent prompted by economic considerations of employers in both traditional manufacturing and more recently in the service sector new shiftwork patterns are being introduced The authors acknowledge the problems inherent in studying shiftwork reviewing three classes of study field survey and laboratory simulation and discuss the role of national culture in determining and limiting the applicability of generic results Topics covered include human biological economic social and domestic influences stress strain and shiftwork health and safety shiftwork and task performance [The Impacts of the Department of Transportation's Commercial Driver Hours-of-service Regulations](#) United States. Crisis Management in Acute Care Settings Michael St. Pierre, Gesine Hofinger, Robert Simon, 2016-11-07 This book is unique in providing a comprehensive overview of the human factors issues relevant to patient safety during acute care By elucidating the principles of human behavior and decision making in critical situations and identifying frequent sources of human error it will help healthcare professionals provide safer more effective treatment when dealing with emergencies characterized by uncertainty high stakes time pressure and stress The third edition has emerged from an ongoing synergistic relationship between clinicians and behavioral scientists on both sides of the Atlantic to update and enhance each chapter

blending the strengths of the two professions into a readily accessible text Among other improvements readers will find sharper articulation of concepts and significantly more information on the organizational impact on individual and team performance Crisis Management in Acute Care Settings is the required reference for all who are learning about teaching or providing acute and emergency healthcare It will be of high value for undergraduate and graduate medical and nursing program and offer a much needed resource for those who use high fidelity healthcare simulation to teach teamwork

The Handbook of Operator Fatigue Gerald Matthews,P.A. Hancock,2017-11-01 Fatigue is a recognized problem in many facets of the human enterprise It is not confined to any one area of activity but enters all situations in which humans have to perform for extended intervals of time Most problematic are the circumstances in which obligatory action is continuous and the results of failure are evidently serious or even catastrophic Therefore the modern media especially highlights fatigue related failures in industries such as transportation materials processing and healthcare It can be and indeed is no coincidence that most of the spectacular failures in process control that have resulted in the world s largest industrial accidents have occurred in the small hours of the morning when the circadian rhythm is lowest and operator fatigue itself peaks While there have been legislative efforts made at state federal and international levels to regulate working hours of employees the appropriate implementation of such legislation is still a long way off The Handbook of Operator Fatigue provides a comprehensive account of the subject to serve as the definitive reference work for researchers students and practitioners alike The volume features 30 chapters written by experts from around the world to address each important facet of fatigue including the scale of the fatigue problem Section I the nature of fatigue Section II how to assess fatigue Section III the impact of fatigue on health Section IV fatigue in the workplace Section V the neurological basis of fatigue VI sleep disorders VII and the design of countermeasures to fatigue VIII
