**The Economics of Choice between Energy Sources** Douglas Hague, Pierre Maillet, Chris Rowland, 1987-04-13

Technology and Policy Options for a Low-Emission Energy System in Canada The Expert Panel on Energy Use and Climate Change, 2015-10-27 Technology and Policy Options for a Low Emission Energy System in Canada is an up to date accessible review of options for reducing greenhouse gas emissions and moving Canada toward a low emission future It provides an overview of Canada's energy system an analysis of different energy sources and technologies and an exploration of the public policies available to support a shift toward low emission energy sources and technologies Energy Research and Development and Small Business United States. **Climate Change 2022 -**

**Mitigation of Climate Change** Intergovernmental Panel on Climate Change (IPCC), 2023-08-17 This Working Group III contribution to the IPCC Sixth Assessment Report provides a comprehensive and transparent assessment of the literature on climate change mitigation The report assesses progress in climate change mitigation options for reducing emissions and enhancing sinks With greenhouse gas emissions at the highest levels in human history this report provides options to achieve net zero as pledged by many countries The report highlights for the first time the social and demand side aspects of climate mitigation and assesses the literature on human behaviour lifestyle and culture and its implications for mitigation action It brings a wide range of disciplines notably from the social sciences within the scope of the assessment IPCC reports are a trusted source for decision makers policymakers and stakeholders at all levels international regional national local and in all branches government businesses NGOs Available as Open Access on Cambridge Core *Multiple Choice Questions on Renewable Energy, Second Edition* Arun K Tripathi, 2017-04-21 The second edition of Multiple Choice Questions on Renewable Energy explores renewable energy sector in a multiple choice question format It contains more than 1500 questions that focus on solar wind biomass biogas biofuels hydro energy from wastes hydrogen geothermal ocean tidal and waves Similar to the previous edition this edition too has three levels of questions The book provides a comprehensive overview of renewable energy development in India This book is useful for academicians students pursuing engineering or agriculture related courses aspirants of various competitive exams professionals and stakeholders in the renewable energy sector It can also be used for quiz programmes organized in schools universities engineering institutions and on television

**Energy deregulation status of natural gas customer choice programs : report to Congressional requesters ,**

**Energy Issues and Options for Developing Countries** United Nations, 2019-06-26 Originally published in 1989 This book presents the situation regarding energy provision and policy in developing countries It looks at Enhanced Oil Recovery Hydropower and small energy packages suitable for rural areas including renewable energies and the various needs and

systems affected such as water pumping and telecommunications Each section is broken down into salient issues and information is provided on environmental issues socioeconomic issues costs and limitations and what is considered the state of the art in each area The final section offers a view of the application of computing technology in energy planning

Energy Options Impact on Regional Security Frano Barbir, Sergio Ulgiati, 2010-09-02 Energy appears to be a fundamental driving force of economic and political strategies as well as planetary stability Energy related issues such as 1 the availability of new energy sources and viable technologies 2 the disparity in access to energy sources 3 the role of energy in our societies energy societal metabolism 4 the energy support to the life of our cities where about half of world population is going to live very soon and 5 the energy demand for food security all over the world are hot problems that humans will have to face within the framework of sustainability ecologically sound production and consumption patterns associated with socially acceptable life styles in terms of policies technological development and economic processes A coherent energy strategy is required addressing both energy supply and demand security of access development problems equity market dynamics by also taking into account the whole energy lifecycle including fuel production transmission and distribution energy conversion and the impact on energy equipment manufacturers and the end users of energy systems Issues of energy efficiency and rebound effect must also be taken into proper account In the short term the aim should be to achieve higher energy efficiencies and increased supply from local energy sources in particular renewable energy sources *Energy Abstracts for Policy Analysis*, 1989

Sustainable Development and Innovation in the Energy Sector Ulrich Steger, 2005 Explores how these conflicting scenarios could be reconciled how can we shape a more sustainable energy system from the existing one and possible technological progress and innovations to enable a brighter future Addresses the reality that there exists no consensus on the extent to which innovations can really contribute to reconciling ever growing energy consumption availability of resources and the environment and the structural demands on any energy system Offers and explains a four point strategy Energy should according to its importance regain a top priority in the political arena highly targeted subsidies should be given for a limited amount of time to speed up the market introduction of energy efficient and regenerative techniques in analogy to the Dutch model Negotiated agreements and unilateral self commitments can subsequently ensure further market diffusion of sustainable energy innovations the basic research in energy should not be diminished but intensified instead Working Fluid Selection for Organic Rankine Cycle and Other Related Cycles Attila R. Imre, 2020-06-16 The world's energy demand is still growing partly due to the rising population partly to increasing personal needs This growing demand has to be met without increasing or preferably by decreasing the environmental impact One of the ways to do so is the use of existing low temperature heat sources for producing electricity such as using power plants based on the organic Rankine cycle ORC In ORC power plants instead of the traditional steam the vapor of organic materials with low boiling points is used to turn heat to work and subsequently to electricity These units are usually less efficient than steam based plants therefore they should

be optimized to be technically and economically feasible The selection of working fluid for a given heat source is crucial a particular working fluid might be suitable to harvest energy from a 90 geothermal well but would show disappointing performance for well with a 80 head temperature The ORC working fluid for a given heat source is usually selected from a handful of existing fluids by trial and error methods in this collection we demonstrate a more systematic method based on physical and chemical criteria     Solar Energy in America's Future United States. Energy Research and Development Administration. Division of Solar Energy,1977     Solar Energy in America's Future John S. Reuyl,Stanford Research Institute,1977     *Energy Conservation in Transportation* ,1979     The Energy Consumer ,     *Conservation Psychology* Susan Clayton,Gene Myers,2015-06-29 People are inseparable from natural ecosystems and understanding how people think about experience and interact with nature is crucial for promoting environmental sustainability as well as human well being This is the new edition of what is now the leading textbook in conservation psychology the field that explores connections between the study of human behavior and the achievement of conservation goals Completely updated this book summarizes theory and research on ways in which humans experience nature it explores people s conceptions of nature and environmental problems their relationship with nature and their moral lenses on nature and examines ways to encourage conservation oriented behavior at both individual and societal levels Throughout the authors integrate a wide body of research demonstrating the role of psychology in promoting a more sustainable relationship between humans and nature New sections cover human perceptions of environmental problems new examples of community based conservation and a positive psychology perspective that emphasizes the relevance of nature to human resilience Additional references are to be found throughout this edition along with some new examples and a reorganisation of chapters in response to reader feedback This fascinating volume is used for teaching classes to senior undergraduate and graduate students of Conservation Psychology Environmental Psychology and Conservation Science in departments of Psychology Geography Environmental Science and Ecology and Evolution It is equally suitable as a starting point for other researchers and practitioners psychologists conservation biologists environmental scientists and policy makers needing to know more about how psychological research can inform their conservation work     Energy Storage Options and Their Environmental Impact R. E. Hester,R. M. Harrison,2018-10-22 The growth of renewable energy technologies mainly wind and solar demands the development of practical and economically viable energy storage technologies This book explores the current state of the art of large scale energy storage and examines the likely environmental impacts of the main categories based on the types of energy stored     **Handbook of Small Modular Nuclear Reactors** Daniel T. Ingersoll,Mario D. Carelli,2014-09-22 Small modular reactors SMRs are an advanced safe type of nuclear reactor technology that are suitable for small and medium sized applications including both power and heat generation In particular their use as individual units or in combination to scale up capacity offer benefits in terms of siting installation operation lifecycle and economics in comparison to the development of

larger nuclear plant for centralised electricity power grids Interest has increased in the research and development of SMRs for both developing countries as well as such additional cogeneration options as industrial chemical process heat desalination and district heating and hydrogen production This book reviews key issues in their development as well as international R D in the field Gives an overview of small modular reactor technology Reviews the design characteristics of integral pressurized water reactors and focuses on reactor core and fuel technologies key reactor system components instrumentation and control human system interfaces and safety Considers the economics financing licensing construction methods and hybrid energy systems of small modular reactors Describes SMR development activities worldwide and concludes with a discussion of how SMR deployment can contribute to the growth of developing countries      First Choice For Energy Support: Fact Book FY 2004, Twenty-Seventh Edition ,
