The Modularity Of Mind:

The Modularity of Mind Jerry A. Fodor, 1983-04-06 This study synthesizes current information from the various fields of cognitive science in support of a new and exciting theory of mind. Most psychologists study horizontal processes like memory and information flow. Fodor postulates a vertical and modular psychological organization underlying biologically coherent behaviors. This view of mental architecture is consistent with the historical tradition of faculty psychology while integrating a computational approach to mental processes. One of the most notable aspects of Fodor's work is that it articulates features not only of speculative cognitive architectures but also of current research in artificial intelligence. Modularity of Mind Jerry Alan Fodor, 1989 *The Modularity of Mind* Jerry A. Fodor, 1987 The Modularity of Emotions Luc Faucher, Christine Tappolet, 2008 Quick and smart Karen Jones Against emotional modularity Ronald de Sousa Emotions are not modules James A Russell Beyond the basics Robyn Bluhm Empathy primitive reactions and the modularity of emotion Anne J Jacobson Biological modules and emotions Paul Dumouchel Is emotion a form of perception Jesse J Prinz Two views of emotional perception Andrew Sneddon Assembling the emotions Vincent Bergeron and Mohan Matthen Cognitive modularity of emotion Louis C Charland Shame and other cases of modularity without modules Ruwen Ogien Unexpected pleasure Timothy Schroeder The Mind Doesn't Work that Way Jerry A. Fodor, 2000 Jerry Fodor argues against the widely held view that mental processes are largely computations that the architecture of cognition is massively modular and that the explanation of our innate mental structure is basically Darwinian. Working Memory and Language in the Modular Mind John Truscott, 2022-06-16 The book explores two fundamental aspects of the human mind and their relation to one another. The first is the way that information is put to use in the mind. When we are doing a mental arithmetic problem for example how do we bring the relevant bits of information to mind and hold them there while carrying out the series of calculations. This is working memory the subject of an enormous research literature in psychology neuroscience and a great many other disciplines. Characterizing the working memory process is now a major part of efforts to understand the human mind. How we characterize this process depends of course on how we characterize the human mind as a whole. In particular is the mind made up of a number of distinct units each carrying out a specialized function. There is considerable reason to say that it is and this modular view of the mind has become prominent in a great deal of academic work notably in cognitive neuroscience with important implications for our understanding of how working memory works. But these implications have received surprisingly little consideration to this point. The aim of the book is to explore this relation between working memory and modularity first in general terms and then using a specific modular view of the mind the Modular Cognition Framework. The ideas are illustrated and further developed through an application to language and especially second language acquisition and use. Modularity Werner Callebaut, Diego Rasskin-Gutman, 2005 Modularity the attempt to understand systems as integrations of partially independent and interacting units is today a dominant theme in the life sciences cognitive science

and computer science The concept goes back at least implicitly to the Scientific or Copernican Revolution and can be found behind later theories of phrenology physiology and genetics moreover art engineering and mathematics rely on modular design principles This collection broadens the scientific discussion of modularity by bringing together experts from a variety of disciplines including artificial life cognitive science economics evolutionary computation developmental and evolutionary biology linguistics mathematics morphology paleontology physics theoretical chemistry philosophy and the arts The contributors debate and compare the uses of modularity discussing the different disciplinary contexts of modular thinking in general including hierarchical organization near decomposability quasi independence and recursion or of more specialized concepts including character complex gene family encapsulation and mosaic evolution what modules are why and how they develop and evolve and the implication for the research agenda in the disciplines involved and how to bring about useful cross disciplinary knowledge transfer on the topic The book includes a foreword by the late Herbert A Simon addressing the role of near decomposability in understanding complex systems Contributors Lee Altenberg Lauren W Ancel Meyers Carl Anderson Robert B Brandon Angela D Buscalioni Raffaele Calabretta Werner Callebaut Anne De Joan Rafael Delgado Buscalioni Gunther J Eble Walter Fontana Fernand Gobet Alicia de la Iglesia Slavik V Jablan Luigi Marengo Daniel W McShea Jason Mezey D Kimbrough Oller Domenico Parisi Corrado Pasquali Diego Rasskin Gutman Gerhard Schlosser Herbert A Simon Roger D K Thomas Marco Valente Boris M Velichkovsky Gunter P Wagner Rasmus G Winter Vienna Series in Theoretical Biology

The Evolution of Mind Steven W. Gangestad, Jeffry A. Simpson, 2016-01-26 In the past two decades an explosion of research has generated many compelling insights as well as hotly debated controversies about the evolutionary bases of human nature This important volume brings together leading proponents of different theoretical and methodological perspectives to provide a balanced look at 12 key questions at the core of the field today In 43 concise accessible chapters followed by an integrative conclusion the contributors present viewpoints informed by human behavioral ecology evolutionary psychology and gene culture coevolutionary approaches Topics include the strengths and limitations of different methodologies metatheoretical issues and debates concerning the evolution of the human brain intellectual abilities culture and sexual behavior

The Faculties Dominik Perler, 2015 We often explain the activities of human and non human animals by referring to their special faculties But what are faculties How do they work And how can they be individuated This book discusses these questions covering a wide period from Plato up to contemporary debates about faculties as modules of the mind

Minds and Persons Anthony O'Hear, 2003-08-25 The nature of the mind and of consciousness the reality of freedom the concept of agency and the relation of language to the mental are all basic perennial philosophical issues They are some of the topics pursued in these original essays by leading thinkers in the field of the contemporary philosophy of mind and action The essays are based on the lectures given in The Royal Institute of Philosophy's annual lecture series for 2001 2002
