Infant James F. Bosma,1973 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1972

First multi year cumulation covers six years 1965 70 *The Neural Basis of Oral and Facial Function* Ronald Dubner,2013-04-17 This book is a result of our combined major interests in oral and facial function Since most of our research efforts have been concentrated on fundamental neural mechanisms the book emphasizes basic research in this area However our back grounds in clinical dentistry have always made us acutely aware of the relevance of these findings to clinical problems in dentistry and medicine and such correlations are emphasized throughout the text The term oral and facial function will here include the sensory and motor neural mechanisms of the face mouth pharynx and larynx Detailed discussions of nasal function olfaction and speech mechanisms have been omitted these areas would encompass a book in themselves A chapter on the subject of taste presents a brief overview in relation to other chapters in the book and clinical significance We have not intended each chapter to be a review of the literature in a given area but have chosen to emphasize significant findings for total function of the area References are limited to review articles whenever possible and the reader is invited to search such reviews for original articles of interest Where such reviews are not available original articles are usually referenced so that the book provides a path to source material for those so inclined Some of the chapters on special areas of interest such as teeth periodontium and jaw reflexes however are extensively referenced because of their unique relationship to the subject matter of the book Infancy Tiffany Field,1990 The author deals with motor development

perception cognition and social development and considers the ways in which distinctions among these abilities are arbitrary and hinder evolution of an adequate account of infancy Field pediatrics psychology and psychiatry U of Miami School of Medicine describes the recent research focusing primarily on social emotional development but also considering the perceptual cognitive and motor development of the infant She includes an account of the remarkable development of the fetus and a chapter on infants at risk Paper edition unseen 7 95 Annotation copyrighted by Book News Inc Portland OR

Biological and Behavioral Determinants of Language Development Norman A. Krasnegor, Duane M. Rumbaugh, Richard L. Schiefelbusch, Michael Studdert-Kennedy, Esther Thelen, 2014-02-25 This book presents a current interdisciplinary perspective on language requisites from both a biological comparative perspective and from a developmental learning perspective Perspectives regarding language and language acquisition are advanced by scientists of various backgrounds speech hearing developmental psychology comparative psychology and language intervention This unique volume searches for a rational interface between findings and perspectives generated by language studies with humans and with chimpanzees Intended to render a reconsideration as to the essence of language and the requisites to its acquisition it also provides readers with perspectives defined by various revisionists who hold that language might be other than the consequence of a mutation unique to humans and might fundamentally not be limited to speech Evolution, Early Experience and Human Development Darcia Narváez, 2012-11-29 The field of cognitive psychology has expanded rapidly in recent years with experts in affective and cognitive neuroscience revealing more about mammalian brain function than ever before In contrast psychological problems such as ADHD autism anxiety and depression are on the rise as are medical conditions such as diabetes obesity and autoimmune disorders Why in this era of unprecedented scientific self knowledge does there seem to be so much uncertainty about what human beings need for optimal development Evolution Early Experience and Human Development asserts that human development is being misshaped by government policies social practices and public beliefs that fail to consider basic human needs In this pioneering volume scientists from a range of disciplines theorize that the increase in conditions such as depression and obesity can be partially attributed to a disparity between the environments and conditions under which our mammalian brains currently develop and our evolutionary heritage For example healthy brain and emotional development depends to a significant extent upon caregiver availability and quality of care These include practices such as breastfeeding co sleeping and parental social support which have waned in modern society but nevertheless may be integral to healthy development As the authors argue without a more informed appreciation of the ideal conditions under which human brains minds develop and function human beings will continue to struggle with suboptimal mental and physical health and as problems emerge psychological treatments alone will not be effective The best approach is to recognize these needs at the outset so as to optimize child development Evolution Early Experience and Human Development puts forth a logical empirically based argument regarding human mammalian needs for

optimal development based on research from anthropology neurobiology animal science and human development The result is a unique exploration of evolutionary approaches to human behavior that will support the advancement of new policies new attitudes towards health and alterations in childcare practices that will better promote healthy human development

Neurophysiology and Neuropsychology of Motor Development Kevin J. Connolly, Hans Forssberg, 1997-01-23 A unique analysis of childhood motor development from the perspectives of both neuropsychology and neurophysiology
