Lie Semigroups and their Applications Joachim Hilgert, Karl-Hermann Neeb, 2006-11-15 Subsemigroups of finite dimensional Lie groups that are generated by one parameter semigroups are the subject of this book. It covers basic Lie theory for such semigroups and some closely related topics. These include ordered homogeneous manifolds where the order is defined by a field of cones invariant cones in Lie algebras and associated Olshanskii semigroups. Applications to representation theory, symplectic geometry and Hardy spaces are also given. The book is written as an efficient guide for those interested in subsemigroups of Lie groups and their applications in various fields of mathematics. See the User's guide at the end of the Introduction. Since it is essentially self-contained and leads directly to the core of the theory, the first part of the book can also serve as an introduction to the subject. The reader is merely expected to be familiar with the basic theory of Lie groups and Lie algebras.

General Relativity And Gravitational Physics: Proceedings Of The 12th Italian Conference M. Bassan, F. Fucito, Mauro Francaviglia, I. Modena, 1997-10-22 This volume contains the proceedings of the 12th Italian Conference on General Relativity and Gravitational Physics held in Rome in September 1996. Following the established pattern, the conference was structured such that there were a number of invited lectures and three workshops in parallel sessions regarding astrophysics, general relativity (both classical and quantum) and experimental and observational gravity.

The Selberg-Arthur Trace Formula Salahoddin Shokranian, 2006-11-14 This book, based on lectures given by James Arthur, discusses the trace formula of Selberg and Arthur. The emphasis is laid on Arthur's trace formula for GL_r with several examples in order to illustrate the basic concepts. The book will be useful and stimulating reading for graduate students in automorphic forms, analytic number theory, and non-commutative harmonic analysis, as well as researchers in these fields.

Operator Commutation Relations P.E.T. Jørgensen, R.T. Moore, 2012-12-06 In his Retiring Presidential address delivered before the Annual Meeting of The American

Mathematical Society on December 1948 the late Professor Einar Hille spoke on his recent results on the Lie theory of semigroups of linear transformations So far only commutative operators have been considered and the product law is the simplest possible The non commutative case has resisted numerous attacks in the past and it is only a few months ago that any headway was made with this problem I shall have the pleasure of outlining the new theory here it is a blend of the classical theory of Lie groups with the recent theory of one parameter semigroups The list of references in the subsequent publication of Hille's address Bull Amer Math Soc 56 1950 includes pioneering papers of I E Segal I M Gelfand and K Yosida In the following three decades the subject grew tremendously in vitality incorporating a number of different fields of mathematical analysis Early papers of V Bargmann I E Segal L G ding Harish Chandra I M Singer R Langlands B Konstant and E Nelson developed the theoretical basis for later work in a variety of different applications Mathematical physics astronomy partial differential equations operator algebras dynamical systems geometry and most recently stochastic filtering theory As it turned out of course the Lie groups rather than the semigroups provided the focus of attention

Complexity and Randomness in Group Theory Frédérique Bassino, Ilya Kapovich, Markus Lohrey, Alexei Miasnikov, Cyril Nicaud, Andrey Nikolaev, Igor Rivin, Vladimir Shpilrain, Alexander Ushakov, Pascal Weil, 2020-06-08 Detailed Description

Quantization, Coherent States, and Complex Structures J-P Antoine, S.T. Ali, W. Lisiecki, I.M. Mladenov, Anatol Odziejewicz, 2013-06-29

The XIIIth Białowieża Summer Workshop was held from July 9 to 15 1994 While still within the general framework of Differential Geometric Methods in Physics the Xth Workshop was expanded in scope to include quantum groups q deformations and non commutative geometry It is expected that lectures on these topics will now become an integral part of future workshops In the more traditional areas lectures were devoted to topics in quantization field theory group representations coherent states complex and Poisson structures the Berry phase graded contractions and some infinite dimensional systems Those of us who have taken part in the evolution of the workshops over the years feel a good measure of satisfaction with the excellent quality of the papers presented in particular the mathematical rigour and novelty Each year a significant number of new results are presented and future directions of research are discussed Their freshness and immediacy inevitably leads to intense discussions and an exchange of ideas in an informal and physically charming environment The present workshop also had a higher attendance than its predecessors with approximately 65 registered participants As usual there was a large number of graduate students and young researchers among them

Low Order Cohomology and Applications J. Erven, B.-J. Falkowski, 2006-11-14

Theoretical and Practical Elementary Aspects of High Energy Physics Waleska Aldana, Edgar Cifuentes, Julian Felix, 2001 This proceedings volume deals primarily with high energy physics and following the tradition is dedicated to the improvement of physics in the region The fields covered include high energy physics applied physics condensed matter physics and biophysics

Topics in Infinite Group Theory Benjamin Fine, Anja Moldenhauer, Gerhard Rosenberger, Annika Schürenberg, Leonard Wienke, 2024-11-18 This book gives an advanced

overview of several topics in infinite group theory It can also be considered as a rigorous introduction to combinatorial and geometric group theory The philosophy of the book is to describe the interaction between these two important parts of infinite group theory In this line of thought several theorems are proved multiple times with different methods either purely combinatorial or purely geometric while others are shown by a combination of arguments from both perspectives The first part of the book deals with Nielsen methods and introduces the reader to results and examples that are helpful to understand the following parts The second part focuses on covering spaces and fundamental groups including covering space proofs of group theoretic results The third part deals with the theory of hyperbolic groups The subjects are illustrated and described by prominent examples and an outlook on solved and unsolved problems New edition now includes the topics on universal free groups quasiconvex subgroups and hyperbolic groups and also Stallings foldings and subgroups of free groups New results on groups of F types are added

Periods of Hilbert Modular Surfaces T. Oda, 2012-12-06 *Tata Lectures on Theta I* David Mumford, 2013-12-01 This volume contains the first two out of four chapters which are intended to survey a large part of the theory of theta functions These notes grew out of a series of lectures given at the Tata Institute of Fundamental Research in the period October 1978 to March 1979 on which notes were taken and excellently written up by C Musili and M Nori I subsequently lectured at greater length on the contents of Chapter III at Harvard in the fall of 1979 and at a Summer School in Montreal in August 1980 and again notes were very capably put together by E Previato and M Stillman respectively Both the Tata Institute and the University of Montreal publish lecture note series in which I had promised to place write ups of my lectures there However as the project grew it became clear that it was better to tie all these results together rearranging and consolidating the material and to make them available from one place I am very grateful to the Tata Institute and the University of Montreal for permission to do this and to Birkhauser Boston for publishing the final result The first 2 chapters study theta functions strictly from the viewpoint of classical analysis In particular in Chapter I my goal was to explain in the simplest cases why the theta functions attracted attention

Strings, Branes and Dualities L. Baulieu, Philippe Di Francesco, Michael Douglas, Vladimir Kazakov, Marco Picco, Paul Windey, 2012-12-06 As recent developments have shown supersymmetric quantum field theory and string theory are intimately related with advances in one area often shedding light on the other The organising ideas of most of these advances are the notion of duality and the physics of higher dimensional objects or p branes The topics covered in the present volume include duality in field theory in particular in supersymmetric field theory and supergravity and in string theory The Seiberg Witten theory and its recent developments are also covered in detail A large fraction of the volume is devoted to the current state of the art in M theory in particular its underlying superalgebra as well as its connection with superstring and N 2 strings The physics of D branes and its essential role in the beautiful computation of the black hole entropy is also carefully covered Finally the last two sets of lectures are devoted to the exciting matrix approach to non perturbative string theory

Novelties In String Theory - Proceedings Of The Johns Hopkins Workshop On Current Problems In Particle Theory 22 Robert Marnelius, Lars Brink, 1999-10-05 **Constraint Theory And Quantization Methods: From Relativistic Particles To Field Theory And General Relativity** Filippo Colomo, Luca Lusanna, Giuseppe Marmo, 1994-05-27 This second workshop on constraint theory aims at reviewing the developments that have taken place in the theory of singular Lagrangians and Dirac Bergmann Hamiltonian constraints as well as their quantization Since this theory lies behind all special and general relativistic systems the topics covered here naturally range from mathematical physics to relativistic system particles strings and fields and further to general relativity The variety of topics discussed makes this an important interesting and informative book
