normal affecting up of 60% of older adults with low cognition and increasing the risk of injuries The past decade has witnessed an explosion of new knowledge in the role of cognitive processes into the falls mechanisms This was also accompanied with clinical trials assessing the effect of improving cognition via pharmacological and non pharmacologic approaches to prevent falls and related injuries Unfortunately this revolution in emerging interventions left a gap between clinician scientists and researchers at academic centers where the new data had been generated and the practitioners who care for cognitively impaired patients with falls Most advances are published in specialty journals of geriatric medicine neurology and rehabilitation The aim of this book is to reduce this gap and to provide practical tools for fall prevention in cognitively impaired populations The proposed book is designed to present a comprehensive and state of the art update that covers the pathophysiology epidemiology and clinical presentation of falls in cognitively impaired older adults We additionally aim to reduce the knowledge gap in the association between cognitive processes and falls for practitioners from a translational perspective from research evidence to clinical approach We will address gaps and areas of uncertainty but also we will provide practical evidence based guidelines for the assessment approach and treatment of falls in the cognitively impaired populations This book is a unique contribution to the field Existing textbooks on fall prevention focus in global approaches and only tangentially address the cognitive component of falls and not purposely address special populations and or settings as residential care and nursing homes Due to the expected increase of proportion of older adults with cognitive and mobility impairments this book is also valuable for the whole spectrum of the health care of the elderly By including a transdisciplinary perspective from geriatric medicine rehabilitation and physiotherapy medicine cognitive neurology and public health this book will provide a practical and useful resource with wide applicability in falls assessment and prevention
