Galinina,Sergey Andreev,Sergey Balandin,Yevgeni Koucheryavy,2020-12-22 This book constitutes the joint refereed proceedings of the 20th International Conference on Next Generation Teletraffic and Wired Wireless Advanced Networks and Systems NEW2AN 2020 and the 13th Conference on Internet of Things and Smart Spaces ruSMART 2020 The conference was held virtually due to the COVID 19 pandemic The 79 revised full papers presented were carefully reviewed and selected from 225 submissions The papers of NEW2AN address various aspects of next generation data networks with special attention to advanced wireless networking and applications In particular they deal with novel and innovative approaches to performance and efficiency analysis of 5G and beyond systems employed game theoretical formulations advanced queuing theory and stochastic geometry while also covering the Internet of Things cyber security optics signal processing as well as business aspects ruSMART 2020 provides a forum for academic and industrial researchers to discuss new ideas and trends in the emerging areas **The Internet of Things for Smart Urban Ecosystems** Franco Cicirelli,Antonio Guerrieri,Carlo

Mastroianni,Giandomenico Spezzano,Andrea Vinci,2018-08-10 The main objective of this book is to provide a multidisciplinary overview of methodological approaches architectures platforms and algorithms for the realization of an Internet of Things IoT based Smart Urban Ecosystem SUE Moreover the book details a set of real world applications and case studies related to specific smart infrastructures and smart cities including structural health monitoring smart urban drainage networks smart grids power efficiency healthcare city security and emergency management A Smart Urban Ecosystem SUE is a people centric system of systems that involves smart city environments applications and infrastructures SUEs require the close integration of cyber and physical components for monitoring understanding and controlling the urban environment In this context the Internet of Things IoT offers a valuable enabling technology as it bridges the gap between physical things and software components and empowers cooperation between distributed pervasive and heterogeneous entities

Smart Antennas Lal Chand Godara,2004-01-27 The use of smart antennas to increase mobile communications channels has re ignited research and development in the field Practicing engineers are eager to discover more about this subject and need a comprehensive book that can provide a learning platform and prevent the loss of time spent on searches through journal literature Smart Antennas examines nearly all aspects of array signal processing and presents them in a logical manner It delivers a detailed treatment of antenna array processing schemes adaptive algorithms to adjust weighting direction of arrival DOA estimation methods diversity combining methods that combat fading and reduce errors The book introduces the various processor structures suitable for the narrowband field examining the behavior of both element space

and beamspace processors It then explores adaptive processing focusing on the simple matrix inversion algorithm constrained least mean squares LMS the neural network approach and more The text also describes smart antennas that are suitable for broadband signals and presents analyses and techniques suitable for correlated fields in narrowband and broadband signals This volume supplements its content with extensive references enabling you to further investigate smart antenna array schemes and application

Smart Transportation Systems 2023 Yiming Bie,Kun Gao,Robert J. Howlett,Lakhmi C. Jain,2023-06-14 This book gathers selected papers presented at the KES International Symposium on Smart Transportation Systems KES STS 2023 Modern transportation systems have undergone a rapid transformation in recent years producing a range of technological innovations such as connected vehicles self driving cars electric vehicles Hyperloop and even flying cars and with them fundamental changes in transport systems around the world The book discusses current challenges innovations and breakthroughs in smart transportation systems as well as transport infrastructure modeling safety analysis freeway operations intersection analysis and other related cutting edge topics

Smart Electromechanical Systems Irina Leonidovna Tarasova,Boris Alexandrovich Kulik,2024-08-20 Intelligent electromechanical systems SEMS are used in cyber physical systems that have the ability to integrate computing transmission and storage of information monitoring and management of objects of the physical world Modern intelligent robots are created based on CMS modules A distinctive feature of SEMS is the presence of a central nervous system CNS similar to a human one The Central Nervous System ensures that decisions about appropriate behavior are made in accordance with the goals of SEMS based on rational knowledge about the environment in which it operates and in accordance with its own technical and mental state For the Central nervous system the extraction and processing of this external information by the central nervous system is an integral part of the process of

forming their situational control systems Moreover in order for SEMS to act expediently in a changing and unfamiliar environment and without human participation it is necessary to endow them with properties similar to the mental properties of animals since emotions and temperament are among the main assessments of the behavior of highly organized organisms Therefore it is quite natural to take into account the influence of emotions on decision making in conditions of incomplete information about the environment especially when SEMS interacts with a person to perform complex technological operations Despite the existing technical difficulties a significant number of mathematical and software tools have accumulated to date providing the CNS SEMS with the ability to take into account the psyche when interacting with a person Limitations of sensory capabilities and computing power should be attributed to the limited cognitive abilities of artificial intelligence These features of the central nervous system of modern SEMS must be taken into account when creating mathematical and software tools for SEMS information and measurement systems for the formation of databases and knowledge for recognition and classification decision making and the formation of control actions
