The Solar Spectrum C. de Jager,M.G.J. Minnaert,Rijksuniversiteit te Utrecht,2013-11-11 A good deal of our information on solar physics and on solar phenomena is derived from the solar spectrum A quantitative interpretation of this spectrum was only possible after 1920 after the establishment of Bohr's atomic model the discovery of Saha's law and the development of spectrophotometry The resolving and light gathering powers of our instruments have greatly increased since We have seen an enormous progress in our theoretical understanding of basic atomic phenomena and of the intricate problems concerned with the transfer of energy through a complicated structure like the sun's outer layers In particular the observable part of the solar spectrum tremendously enlarged since the introduction in the years after 1945 of radio astronomy enabling us to study the solar spectrum between wavelengths of some mm to about 15 m of space research giving access to the whole electro magnetic spectrum below 3000 Å down to about 0.01 Å Further the low and high energetic components of the solar particles spectrum have been discovered with space probes the solar wind rockets balloons the so called sub cosmic ray particles and cosmic ray monitors solar cosmic ray bursts The extreme wealth of this spectrum much vaster in extent than the earlier investigators could only dream of is an important source of information It looked appropriate to us after the rapid development of this branch of science to invite the world's leading solar physicists to Utrecht for a summarizing symposium on the whole solar spectrum

Everything About Gravity - Proceedings Of The Second LeCospa International Symposium Pisin Chen,2016-12-29 The proceedings of the 2nd LeCosPA International Symposium Everything about Gravity collects 78 papers contributed by the symposium's Plenary Session and Parallel Session speakers Organizers of the Parallel Sessions have in addition prepared summaries for their own sessions The topics range from quasi local energy in GR in the presence of gravitational radiations a gauge theory perspective of gravity naked black hole firewalls related to the black hole information loss paradox a new theory of spacetime quantization relations between the Schwinger effect and the Hawking radiation and Unruh effect conformal frames in cosmology surprises in nonrelativistic naturalness inflation and tensor fluctuations emergent spacetime for quantum gravity

understanding strongly coupled magnetism through holographic principle the detections of dark matter ultra high energy cosmic neutrinos and cosmic rays etc Last but not least the closing remark delivered by John Ellis raised the following question Does cosmological inflation require a modification of Einstein's gravity After 100 years of remarkable success of Einstein's general relativity the development of a successful quantum theory of gravity has become a major goal in physics in the 21st century This volume serves as a valuable reference for scientists who are interested in frontier research topics of gravity
