Space Earth And Communication:

Space, Earth and Communication Edward W. Ploman, 1984-01-01 Satellites for World Communication United States. Congress. House. Committee on Science and Astronautics, 1959 Committee Serial No 9 Reviews technological advances in the field of communications satellites Classified material has been deleted Earth-to-space Communications at Millimeter Wavelengths Edward E. Altshuler, 1965 It is expected that with the exploration of outer space a requirement for high data rate earth to space communication channels will arise A program to investigate the feasibility of using the millimeter wave region of the spectrum for this application is presented The theory of atmospheric attenuation resulting from losses due to absorption scattering and refraction processes is reviewed and used to estimate propagation losses produced by atmospheric gases clouds and precipitation Curves of total atmospheric attenuation and noise level as a function of meteorological parameters and antenna elevation angle are also presented A series of experiments designed to obtain as much information as possible on the limitations imposed by the atmosphere on millimeter wave propagation is considered Although experiments using natural celestial bodies such as the sun moon planets and galaxies as radio sources are emphasized those which would utilize aircraft rockets and satellites are also mentioned Finally the characteristics of a recently installed precision 29 ft antenna designed to operate at 35 Gc wavelength 8.6 mm with a traveling wave maser as a preamplifier for the radiometer are outlined along with the specific experiments for which this antenna system will be used

Author **Radio Wave Propagation and Channel Modeling for Earth-Space Systems** Athanasios G. Kanatas, Athanasios D. Panagopoulos, 2017-12-19 The accurate design of earth space systems requires a comprehensive understanding of the various propagation media and phenomena that differ depending on frequencies and types of applications The choice of the relevant channel models is crucial in the design process and constitutes a key step in performance evaluation and testing of earth space systems The subject of this book is built around the two characteristic cases of satellite systems fixed satellites and mobile satellite systems Radio Wave Propagation and Channel Modeling for Earth Space Systems discusses the state of the art in channel modeling and characterization of next generation fixed multiple antennas and mobile satellite systems as well as propagation phenomena and fade mitigation techniques The frequencies of interest range from 100 MHz to 100 GHz from VHF to W band whereas the use of optical free space communications is envisaged Examining recent research advances in space time tropospheric propagation fields and optical satellite communication channel models the book covers land mobile multiple antennas satellite issues and relative propagation campaigns and stratospheric channel models for various applications and frequencies It also presents research and well accepted satellite community results for land mobile satellite and tropospheric attenuation time series single link and field synthesizers The book examines aeronautical communications channel characteristics and modeling relative radio wave propagation campaigns and stratospheric channel model for various applications and frequencies Propagation effects on
