**A Topology of Everyday Constellations** Georges Teyssot, 2013-02-22

The threshold as both boundary and bridge investigations of spaces public and private local and global Today spaces no longer represent a bourgeois haven nor are they the sites of a classical harmony between work and leisure private and public the local and the global The house is not merely a home but a position for negotiations with multiple spheres the technological as well as the physical and the psychological In *A Topology of Everyday Constellations* Georges Teyssot considers the intrusion of the public sphere into private space and the blurring of notions of interior privacy and intimacy in our societies He proposes that we rethink design in terms of a new definition of the practices of everyday life Teyssot considers the door the window the mirror and the screen as thresholds or interstitial spaces that divide the world in two the

outside and the inside Thresholds he suggests work both as markers of boundaries and as bridges to the exterior The stark choice between boundary and bridge creates a middle space an in between that holds the possibility of exchanges and encounters If the threshold no longer separates public from private and if we can no longer think of the house as a bastion of privacy Teyssot asks does the body still inhabit the house or does the house evolving into a series of microdevices inhabit the body

Sawyers,1993 **Developments in Structural Form** Rowland Mainstone,2013-04-03 In the critically acclaimed first edition of this book Mainstone offered a brilliant and highly original account of the structural developments that have made possible the achievements of architects and bridge builders throughout history In this extensively revised and expanded new edition now available in paperback new insights and a full coverage of recent developments in both design and construction are incorporated The book identifies features that distinguish the forms built by man from those shaped by nature and discusses the physical and other constraints on the choices that can be made It then looks in turn at all the elementary forms arches domes beams slabs and the like which combine into the more complex forms of complete structures and at the different classes of the complete forms themselves The development of each form is traced chronologically but with an emphasis less on the chronology than on the problems that designers have continually faced in trying to serve new ends with limited means or to serve old ones in new ways The book concludes with a chapter on the processes of design showing how the designer s freedom of choice has been widened by a growing understanding of structural behaviour **Classed Subject Catalog** Engineering Societies Library,1968
