**Space Research: Physical and Technical Principles** Mikhail Galaktionovich Kroshkin, 1972 Experimental data on the space around the Earth and interplanetary space based mainly on rocket and satellite observations are presented First the basic physical parameters of the medium or phenomena are considered and then the parameters of phenomena which since they are dependent to some degree on the basic ones have in turn a corresponding influence on others Characteristics which are completely independent of or only slightly dependent on the others and thus do not affect them are described The results of a study of the effects which specific conditions in space have on the materials structural elements and systems of spacecraft are presented **Scientific and Technical Aerospace Reports**, 1981 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **Soviet-bloc Research in Geophysics, Astronomy, and Space**, 1969 Literature 1972, Part 2 S. agenda recommended by the NRC in its 2002 report *The Sun to the Earth and Beyond* which did not reflect the new exploration goals would be affected As a result NASA requested the NRC to review the role solar and space physics should play in support of the new goals This report presents the results of that review It considers solar and space physics both as aspects of scientific exploration and in support of enabling future exploration of the solar system The report provides a series of recommendations about NASA's Sun Earth Connections program to enable it to meet both of those goals Life and Physical Sciences Research for a New Era of Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2010-08-23 In response to requests from Congress NASA asked the National Research Council to undertake a decadal survey of life and physical sciences in microgravity Developed in consultation with members of the life and physical sciences communities the guiding principle for the study is to set an agenda for research for the next decade that will allow the use of the space environment to solve complex problems in life and physical sciences so as to deliver both new knowledge and practical benefits for humankind as we become a spacefaring people The project's statement of task calls for delivery of two books an interim report and a final survey report Although the development of specific recommendations is deferred until the final book this interim report does attempt to identify programmatic needs and issues to guide near term decisions that are critical to strengthening the organization and management of life and physical sciences research at NASA *Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for 2002* United States.
