*The Spacetime Origin Of the Universe With Visible Dark Matter & Energy* Vladimir Ginzburg, 2015-02-10 The Universal Spacetime Theory UST is the main subject of this book It attempts to answer some very interesting questions related to the science and philosophy What is the origin of the Universe How was the Universe created out of nothing What are the structure and properties of ordinary matter that makes up less than 5% of the Universe What are the structure and properties of dark matter that occupies about 27% of the Universe What are the structure and properties of the dark energy that occupies roughly 68% of the Universe Is the communication possible with superluminal velocity

**Advanced Technologies of Quantum Key Distribution** Sergiy Gnatyuk, 2018-05-30 This book explores both the state of the art and the latest developments in QKD It describes the fundamental concepts and practical aspects of QKD from a viewpoint of information security and quantum channel efficiency improvement The purpose of this book is to extend and update the knowledge of the readers in the dynamically changing field of QKD The authors attempt to present in detail their results of scientific research which is divided into two sections Modern QKD Technologies and Quantum Channel Construction It will be useful for researchers engineers graduates and doctoral students working in quantum cryptography and information security related areas

The Foundations of Spacetime Physics Antonio Vassallo, 2022-09-30 This book provides an up to date overview of the foundations of spacetime physics It features original essays written by world class experts in the physics and philosophy of spacetime The foundational questions regarding the origin and nature of spacetime are branching into new and exciting directions These questions are not restricted to the quantum gravity program but also arise in the context of a well established theory like general relativity Against the background of these quick and diverse developments this volume features a broad range of perspectives on spacetime Part I focuses on the nature of spacetime in non quantum theories such as Newtonian mechanics and relativity Part II explores some intriguing conceptual implications of developing a quantum theory of spacetime The Foundations of Spacetime Physics is an essential resource for scholars and advanced students working in philosophy of physics philosophy of science and scientific metaphysics

**Space--time--matter** Hermann Weyl, 1922 The Ontology of Spacetime II, 2008-06-17 The sixteen papers collected in this volume are expanded and revised versions of talks delivered at the Second International Conference on the Ontology of Spacetime organized by the International Society for the Advanced Study of

Spacetime John Earman President at Concordia University Montreal from 9 to 11 June 2006 Most chapters are devoted to subjects directly relating to the ontology of spacetime The book starts with four papers that discuss the ontological status of spacetime and the processes occurring in it from a point of view that is first of all conceptual and philosophical The focus then slightly shifts in the five papers that follow to considerations more directly involving technical considerations from relativity theory After this Time Becoming and Change take centre stage in the next five papers The book ends with two excursions into relatively uncharted territory a consideration of the status of Kaluza Klein theory and an investigation of possible relations between the nature of spacetime and condensed matter physics respectively Space and time in present day physics and philosophy Relatively low level of technicality easily accessible Introduction from scratch of the debates surrounding time Broad spectrum of approaches coherently represented

**MATRIX OF THE UNIVERSE** AUDREY ELIZABETH

RANGLES,2021-04-04 The theory of Matrix series of books offers the exiting developments in cosmological theory Matrix of the Universe is the 6th book of the series In this book we discuss the structure of the Universe certain aspects of its evolution energy matter space and time We combine elements of psychology cosmology and astrophysics to discover secrets hidden deep in the Universe Can we picture to ourselves a three dimensional universe which is finite yet unbounded The usual answer to this question is No but that is not the right answer Albert Einstein Geometry and Experience 1922 Stay well and enjoy your reading Yours sincerely Audrey Elizabeth Randles DECEMBER 28 2020 *Evolution to the superhuman and prison-less community of the type 1 civilization.* , According to the rate of development of our technology we are about to enter the next stage of cultural and social evolution Highly developed civilizations are classified into three types namely Type 1 Type 2 and Type 3 We are moving towards the type 1 civilization The greatest feature of Type 1 civilization is that we can meet all our energy needs with the help of solar energy If we can fully utilize solar energy we will have the energy we need for free This will greatly strengthen our economic structure Because of this the growth of our technology will get accelerated tenfold This is both a boon and a bane for us Technology will take us to greater heights At the same time these same technologies will cause our total destruction Therefore the whole world needs to become a like minded society So this book mainly discusses how we should change socially and culturally under the new circumstances We also discuss how to build a sustainable human society We are passing through a situation where hostilities between many countries can turn into war at any time At the same time separatists and extremists are on the rise within many countries In such a situation it is a great danger if we enter a Type 1 civilization Therefore this book is mainly about finding a way to solve all the problems that exist on Earth today Despite being rich in natural resources many countries are in the depths of poverty We can overcome this if we have a transparent society and governance system The first thing we need to do is to become a socially conscious people If every man becomes socially responsible the earth will be peaceful It is the responsibility of our rulers to mold such a

society Therefore we are also discussing the need for a transparent governance system Terrorism has become so strong in the world because of the competition between two superpower countries You can also see in this book the need to avoid this competition All human beings have a duty to create a peaceful earth This book is my humble contribution to that end Hope you will find it useful too *The GOD Entity* Scott S Gordon, 2015-09-18 Theoretical physics has reached an impasse that many feel is a dead end As the odds of finding evidence for supersymmetry starts to fade new theories have emerged such as The Multiverse Extra Dimensions and Dimensional Transmutation These theories attempt to explain the inexplicable yet at the same time fail to explain the explainable Many physicists are left frustrated and wondering aloud How could we have travelled so far down the wrong path Any intelligent fool can make things bigger and more complex It takes a touch of genius and a lot of courage to move in the opposite direction Albert Einstein Engineers know that the right answer is usually a simple one As Einstein would put it The grand aim of all science is to cover the greatest number of empirical facts by logical deduction from the smallest number of hypotheses or axioms Gordon s theory of everything starts with only two postulates the massless bosons called Gordon Omnipresent Dots or GOD entities and the E0 energy associated with their initial alignment These primordial postulates are the only building blocks of a model that explains the inevitable course of events that created our universe The mathematics created within this process corrects the postulates used to develop the theories of relativity and quantum mechanics which can finally be united and subsequently applied to the infinitesimally small and the infinitely large We currently use parameters such as distance time straight lines velocity electric charge energy fields and mass Gordon s theory of everything begins at a time when none of these parameters existed prior to the Big Bang It takes nothing for granted as a predestined process unfolds creating these parameters as they come into existence defined by the evolving mathematics The Gordon model reveals that energy exists in three separate Gordon energy states described by The GOD equation The interaction between these energy states result in the formation of energy fields and the creation of all forces Most importantly the structure of space time from the previously unrecognized G0 energy state provides the solid foundation upon which we are able to build a new understanding of everything in the universe The simplicity and elegance of Gordon s theory of everything will astonish everyone as everything falls into place The purpose of this book is to put the field of physics on a theoretically sound foundation The structures of the first few fundamental particles and the energy fields they generate are just the beginning You will have the opportunity to make major contributions Starting where this book leaves off at the up quark and electron the race is on to find the internal structure of a neutron and all the particles of the standard model Don t be left behind Be among the first to read Scott S Gordon s *The GOD Entity* Gordon s Theory of Everything

*Replicating Space Theory* Silvio Gonzalez, 2022-04-07 Had the author s inventive hypothesis of Replicating Space been envisioned when Isaac Newton published his laws of motion and gravity it would most certainly have been incorporated into our concept of the nature of the Universe The author describes a comprehensive vision of the nature of the heavens their

creation and growth He throws in a whopping amount of down to earth explanations of his unique perspective on the origins of everything No stone is left unturned as he destroys conventional academic theories replacing them with simple yet not obvious truths Matter energy light speed space time reality the edge of the Universe are all players in a new more tangible explanation of our Universe All these things along with many more concepts will be explained in light of the new radical Replicating Space theory RST

**On the Nature and Origin of Time, Space, Gravity and Reality** Jonathan P. Sumber, DPM, 2016-04-30 This book is an in depth expose of a system of physics in which the atom is integrated within a more inclusive hybrid building block that combines dark energy and electromagnetic energy together within one system of physics that creates all the matter and the spacetime of our universe The nature and the origin of matter space time gravity inertia kinetic energy and even consciousness are explained from within this hybrid system of physics allowing the large scale and the small scale to be unified within it To understand how the universe started out from an event that created the passage of time and three dimensions of space out of a state where time passage and the three dimensions of space did not previously exist we must first come to understand the nature of other levels of order and dimensionalities that exist beyond the boundaries of our perceived essence This work explores some of those levels of order and dimensionalities that exist outside of our universe while also revealing how these other dimensionalities take part in creating aspects of our universe as well as of our consciousness that we have not yet come to identify If you've wondered how it is that the universe functions as it does on the large scale level within the parameters of time and space as to the provisions of special and general relativity while quantum particles have been shown to disobey many of those laws this work will reveal a system of physics that bridges the gap between the large scale and the small scale as well as between time and space which makes sense out of what had previously seemed to be a paradox

In Search of Unity Spencer Scoular, 2013 Albert Einstein once wrote The supreme task of the physicist is to arrive at those universal laws from which the cosmos can be built up by pure deduction Remarkably in this book we arrive at those universal axioms from which universal science can be built up by pure deduction Within the prevailing paradigm of science the mathematical philosophy of nature we show it is not possible to unify science To overcome this limitation we introduce a new more general paradigm Since the new paradigm is a generalisation of the mathematical philosophy of nature we are able to retain the mathematical knowledge built up within the prevailing paradigm Within the new paradigm we introduce four empirical universal axioms from which we deduce that it is not possible to mathematically unify the two fundamental theories of physics quantum theory and general relativity Instead from the universal axioms we logically deduce

the first symmetry of nature the first invariance of nature the universal arrow of time the universal laws of nature and the three universal dynamic theories of nature quantum theory general relativity and universal evolution The first symmetry of nature and first invariance of nature arise from the constancy of the universal laws of nature not only being a symmetry but a unifying symmetry The biological view of universal evolution provides a new theory of biological evolution that replaces what we show is the deficient neo Darwinian synthesis In a similar way theories of evolution in all the sciences are based on their respective views of universal evolution From the universal axioms we deduce the universal features of nature thereby unifying physics chemistry biology psychology sociology economics and all of science This book is written for scientifically inclined general readers teachers students scientists philosophers physicists chemists biologists psychologists sociologists and economists
