The Bloomsbury Encyclopedia of Philosophers in America John R. Shook, 2016-02-11 For scholars working on almost any aspect of American thought The Bloomsbury Encyclopedia to Philosophers in America presents an indispensable reference work Selecting over 700 figures from the Dictionary of Early American Philosophers and the Dictionary of Modern American Philosophers this condensed edition includes key contributors to philosophical thought From 1600 to the present day entries cover psychology pedagogy sociology anthropology education theology and political science before these disciplines came to be considered distinct from philosophy Clear and accessible each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading Featuring a new preface by the editor and a comprehensive introduction The Bloomsbury Encyclopedia to Philosophers in America includes 30 new entries on twenty first century thinkers including Martha Nussbaum and Patricia Churchland With in depth overviews of Waldo Emerson Margaret Fuller Noah Porter Frederick Rauch Benjamin Franklin Thomas Paine and Thomas Jefferson this is an invaluable one stop research volume to understanding leading figures in American thought and the development of American intellectual history

Paradoxes R. M. Sainsbury, 2009-02-19 A paradox can be defined as an unacceptable conclusion derived by apparently acceptable reasoning from apparently acceptable premises Many paradoxes raise serious philosophical problems and they are associated with crises of thought and revolutionary advances The expanded and revised third edition of this intriguing book considers a range of knotty paradoxes including Zeno's paradoxical claim that the runner can never overtake the tortoise a new chapter on paradoxes about morals paradoxes about belief and hardest of all paradoxes about truth The discussion uses a minimum of technicality but also grapples with complicated and difficult considerations and is accompanied by helpful questions designed to engage the reader with the arguments The result is not only an explanation of paradoxes but also an excellent introduction to philosophical thinking

The World of the Imagination Eva T. H. Brann, 1993-03-16 In this book Eva Brann sets out no less a task than to assess the meaning of imagination in its multifarious expressions throughout western history The result is one of those rare achievements that will make The World of the Imagination a standard reference

Scientific Explanation and the Causal Structure of the World Wesley C. Salmon, 2020-11-10 The philosophical theory of scientific explanation proposed here involves a radically new treatment of causality that accords with the pervasively statistical character of contemporary science Wesley C Salmon describes three fundamental conceptions of scientific explanation the epistemic modal and ontic He argues that the prevailing view a version of the epistemic conception is untenable and that the modal conception is scientifically out dated Significantly revising aspects of his earlier work he

defends a causal mechanical theory that is a version of the ontic conception Professor Salmon's theory furnishes a robust argument for scientific realism akin to the argument that convinced twentieth century physical scientists of the existence of atoms and molecules To do justice to such notions as irreducibly statistical laws and statistical explanation he offers a novel account of physical randomness The transition from the reviewed view of scientific explanation that explanations are arguments to the causal mechanical model requires fundamental rethinking of basic explanatory concepts **Forbidden**

Knowledge N. Rescher, 2012-12-06 This volume collects together eleven essays in epistemology written during the past three years They are mostly unpublished just four of them having appeared previously numbers two three four and eleven Detailed acknowledgement of prior publication is made in the notes to the relevant chapters I am indebted to the editors of the several publications involved for their kind permission to use this material And I am particularly grateful to my friend Professor Mario Bunge for his interest in my work and for his willingness to include this sample of it in his Episteme series
NICHOLAS RESCHER Pittsburgh PA December 1986 xi INTRODUCTION The philosophy of knowledge covers a vast and enormously diversified terrain Within this broad area the essays that comprise the present book deal specifically with the following issues 1 The moral dimension of inquiry in particular scientific inquiry into the ways of the world Chapter 1 2 The epistemic status of such cognitive values of inquiry as coherence Chapter 2 consistency Chapter 3 completeness Chapter 4 3 The cognitive bearing of probabilistic considerations Chapters 5 and 6 4 The epistemic status of certain ideal desiderata of cognition such as totality Chapter 7 precision Chapter 8 exactness Chapter 9 5 *History in Literature* Edward

Quinn, 2014-05-14 Alphabetically arranged articles discuss the major events figures and movements of the twentieth century and how they have been depicted in literature **Zeno's Paradoxes** Wesley C. Salmon, 2001-01-01 A reprint of the Bobbs Merrill edition of 1970 These essays lead the reader through the land of the wonderful shrinking genie to the warehouse where the infinity machines are kept By careful examination of a lamp that is switched on and off infinitely many times or the workings of a machine that prints out an infinite decimal expansion of pi we begin to understand how it is possible for Achilles to overtake the tortoise The concepts that form the basis of modern science space time motion change infinity are examined and explored in this edition Includes an updated bibliography Probability and Causality J.H. Fetzer, 2012-12-06 The contributions to this special collection concern issues and problems discussed in or related to the work of Wesley C Salmon Salmon has long been noted for his important work in the philosophy of science which has included research on the interpretation of probability the nature of explanation the character of reasoning the justification of induction the structure of space time and the paradoxes of Zeno to mention only some of the most prominent During a time of increasing preoccupation with historical and sociological approaches to understanding science which characterize scientific developments as though they could be adequately analysed from the perspective of political movements even mistaking the phenomena of conversion for the rational appraisal of scientific theories Salmon has remained steadfastly devoted to isolating and justifying those

normative standards distinguishing science from non science especially through the vindication of general principles of scientific procedure and the validation of specific examples of scientific theories without which science itself cannot be even remotely adequately understood In this respect Salmon exemplifies and strengthens a splendid tradition whose most remarkable representatives include Hans Reichenbach Rudolf Carnap and Carl G Hempel all of whom exerted a profound influence upon his own development

Space from Zeno to Einstein Nick Huggett, 1999-04-01 Learning through original texts can be a powerful heuristic tool This book collects a dozen classic readings that are generally accepted as the most significant contributions to the philosophy of space The readings have been selected both on the basis of their relevance to recent debates on the nature of space and on the extent to which they carry premonitions of contemporary physics In his detailed commentaries Nick Huggett weaves together the readings and links them to our modern understanding of the subject Together the readings indicate the general historical development of the concept of space and in his commentaries Huggett explains their logical relations He also uses our contemporary understanding of space to help clarify the key ideas of the texts One goal is to prepare the reader both scientist and nonscientist to learn and understand relativity theory the basis of our current understanding of space The readings are by Zeno Plato Aristotle Euclid Descartes Newton Leibniz Clarke Berkeley Kant Mach Poincar and Einstein
