Symbionts Caroline A. Jones, Natalie Bell, Selby Nimrod, 2022-11-08 Essays conversations selected texts and a rich collection of thought provoking artworks celebrate a revolution in bio art Expertly designed by Omnivore and printed on special papers including chlorophyll cover and crush citrus and crush cocoa pages The texts and artworks in *Symbionts* provoke a necessary conversation about our species and its relation to the planet Are we merely mammalian weeds as evolutionary biologist Lynn Margulis put it Or are we partners in producing and maintaining the biosphere as she also suggested *Symbionts* reflects on a recent revolution in bio art that departs from the late 1990s code oriented experiments to embrace entanglement and symbiosis with living Combining documentation of contemporary artworks with texts by leading thinkers *Symbionts* which accompanies an

exhibition at MIT List Visual Arts Center offers an expansive view of humanity's place on the planet. Color reproductions document works by international artists that respond to the revelation that planetary microbes construct and maintain our biosphere. A central essay by coeditor Caroline Jones sets their work in the context of larger discussions around symbiosis. Additional essays, an edited roundtable discussion, and selected excerpts follow. Contributors explore, among other things, the resilient ecological knowledge of indigenous scholars and artists and biofiction, a term coined by Jones to describe the work of such theoretical biologists as Jacob von Uexküll as well as the witty parafictions of artist Anicka Yi. A playful glossary puts scientific terms in conversation with cultural ones.

Catastrophes In Nature And Society: Mathematical Modeling Of Complex Systems Rem G Khlebopros, Victor A Okhonin, Abram I Fet, 2007-02-14 Many people are concerned about crises leading to disasters in nature in social and economic life. The book offers a popular account of the causative mechanisms of critical states and breakdown in a broad range of natural and cultural systems which obey the same laws and thus makes the reader aware of the origin of catastrophic events and the ways to avoid and mitigate their negative consequences. The authors apply a single mathematical approach to investigate the revolt of cancer cells that destroy living organisms and population outbreaks that upset natural ecosystems, the balance between biosphere and global climate interfered lately by industry, the driving mechanisms of market and related economic and social phenomena as well as the electoral system, the proper use of which is an arduous accomplishment of democracy.

The Biosphere and Noosphere Reader David Pitt, Paul R. Samson, 2012-10-02 Foreword written by Mikhail S Gorbachev. Reproduction of work previously unpublished in English. Combines new writing with traditional classics alongside.

Lunar Settlements Haym Benaroya, 2010-02-12 Bringing together some of the most recognized and influential researchers and scientists in various space-related disciplines, *Lunar Settlements* addresses the many issues that surround the permanent human return to the Moon. Numerous international contributors offer their insights into how certain technological, physiological, and psychological challenges must be met to make permanent lunar settlements possible. The book first looks to the past, covering the Apollo and Saturn legacies. In addition, former astronaut and U.S. Senator Harrison H. Schmitt discusses how to maintain deep space exploration and settlement. The book then discusses economic aspects such as funding for lunar commerce, managing human resources, and commercial transportation logistics. After examining how cultural elements will fit into habitat design, the text explores the physiological, psychological, and ethical impact of living on a lunar settlement. It also describes the planning, technical requirements of lunar habitation, the design of both manned and modular lunar bases, and the protection of lunar habitats against meteoroids. Focusing on lunar soil mechanics, the book concludes with discussions on lunar concrete terraforming and using greenhouses for agricultural purposes. Drawing from the lunar experiences of the six Apollo landing missions to the many American and Soviet robotic missions to current space activities and research, this volume summarizes the problems, prospects, and practicality of enduring lunar settlements. It reflects the key disciplines including engineering, physics,

architecture psychology biology and anthropology that will play significant roles in establishing these settlements

Ecopolis Paul F. Downton, 2008-11-19 From 2008 for the first time in human history half of the world's population now live in cities. Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable. Paul Downton's *Ecopolis* takes a major step along this path. It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines. Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development. SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences.

Arid Empire Natalie Koch, 2023-01-17 Longlisted for the 2023 Cundill History Prize The iconic deserts of the American southwest could not have been colonized and settled without the help of desert experts from the Middle East. For example In 1856 a caravan of thirty three camels arrived in Indianola Texas led by a Syrian cameleer the Americans called Hi Jolly. This camel corps the US government hoped could help the army secure the new southwest swath of the country just wrested from Mexico. Though the dream of the camel corps and sadly the camels died the idea of drawing on expertise knowledge and practices from the desert countries of the Middle East did not. As Natalie Koch demonstrates in this evocative narrative history the exchange of colonial technologies between the Arabian Peninsula and United States over the past two centuries from date palm farming and desert agriculture to the utopian sci fi dreams of Biosphere 2 and Frank Herbert's *Dune* bound the two regions together solidifying the colonization of the US West and eventually the reach of American power into the Middle East. Koch teaches us to see deserts anew not as mythic sites of romance or empty wastelands but as an arid empire a crucial political space where imperial dreams coalesce.

Designing Data Spaces Boris Otto, Michael ten Hompel, Stefan Wrobel, 2022-07-21 This open access book provides a comprehensive view on data ecosystems and platform economics from methodical and technological foundations up to reports from practical implementations and applications in various industries. To this end the book is structured in four parts. Part I Foundations and Contexts provides a general overview about building running and governing data spaces and an introduction to the IDS and GAIA X projects. Part II Data Space Technologies subsequently details various implementation aspects of IDS and GAIA X including eg data usage control the usage of blockchain technologies or semantic data integration and interoperability. Next

Part III describes various Use Cases and Data Ecosystems from various application areas such as agriculture healthcare industry energy and mobility Part IV eventually offers an overview of several Solutions and Applications eg including products and experiences from companies like Google SAP Huawei T Systems Innopay and many more Overall the book provides professionals in industry with an encompassing overview of the technological and economic aspects of data spaces based on the International Data Spaces and Gaia X initiatives It presents implementations and business cases and gives an outlook to future developments In doing so it aims at proliferating the vision of a social data market economy based on data spaces which embrace trust and data sovereignty
