Space Doctrine For The 21st Century:

Space Doctrine for the 21st Century, 1997 Today there is virtually no approved space doctrine to guide the development and employment of space forces The supporting strategies for organizing training equipping and employing space forces do not exist There is no discussion of the tenets of space power or the operational art of employing space forces Space policy has emerged to fill the doctrinal void Policy is the major influence on the organization training equipping and employment of U S space forces The preeminence of policy and absence of doctrine has caused military effectiveness to be muted in the debates over space forces Without a clear vision of what space forces should do the Air Force has been left to build space forces in an ad hoc manner There is no doctrinal guidance for how to achieve the offensive and defensive mix of forces called for in the national space policy and there is no approved process from which the needed doctrine can be developed Although doctrine development follows a proscribed bureaucratic process little consideration is given to the underlying thought process This paper attempts to define a doctrine development process and use it to formulate a space doctrine This doctrine includes the tenets of space power the operational art of space warfare and implementation strategies for space forces This doctrine can be immediately applied to ongoing space operations

Space Policy in the Twenty-First Century W. Henry Lambright, 2003 Though more than forty years old the space age has just begun and questions about its future abound What will replace the Space Shuttle Will the International Space Station justify its 100 billion potential cost Are asteroids real threats to Earth or just the subject of science fiction movies Will humans land on Mars Will the search for extraterrestrial life be rewarded In Space Policy in the Twenty First Century W Henry Lambright brings together ten top ranking observers of United States space exploration to address these and other issues relating to the future of the space program While the U S no longer competes with the Soviets for technological firsts they argue ideology and national image remain at the core of space policy with other factors playing subordinate roles Reminding readers of the historical highlights the authors pose searching questions about the priorities and applications of space science manned vs unmanned flights and commercial access to the space enterprise Contributors include Christopher F Chyba SETI Institute and Stanford University Ronald J Deibert University of Toronto Daniel H Deudney the Johns Hopkins University W Henry Lambright Syracuse University Roger D Launius NASA Karl A Leib Syracuse University John M Logsdon George Washington University Howard E McCurdy American University Scott N Pace White House Office of Science and Technology Policy and Debora L VanNijnatten Wilfrid Laurier University

Space Policy for the Twenty-First Century Wendy N. Whitman Cobb, Derrick V. Frazier, 2024-04-30 National Security Space Institute 2025 Space Professional Reading List A foundational accessible overview of space policy in the United States This book provides readers with the first comprehensive overview of major space policies in the United States and a framework through which to analyze them It examines all facets of space policy civilian military and commercial and presents this material accessibly for

use by readers at multiple levels from undergraduate courses to government practitioners making and implementing policy. The first section offers a history of space exploration focusing on the US within a global context. The second section looks at the actors and institutions involved in setting space policy in a government based on the separation of powers including the president, Congress, NASA and the Department of Defense. The book concludes with chapters on the different sectors of space policy as well as questions this field will face in the future. As policymakers and business leaders become increasingly aware of the everyday systems that depend on space technologies such as communications, mapping and weather monitoring and as space becomes a more visible arena for commercial competition, potential humanitarian gain and military threats, *Space Policy for the Twenty First Century* helps students and professionals navigate the complexity of space as a policy area.

Space Strategy in the 21st Century Eligar Sadeh, 2013. This book offers an overview of space strategy in the 21st century. The purpose of space strategy is to coordinate, integrate and prioritize space activities across security, commercial and civil sectors. Without strategy, space activities continue to provide value but it becomes difficult to identify and execute long term programs and projects and to optimize the use of space for security, economic, civil and environmental ends. Strategy is essential for all these ends since dependence on and use of space is accelerating globally and space is integrated in the fabric of activities across all sectors and uses. This volume identifies a number of areas of concern pertinent to the development of national space strategy including intellectual foundations, political challenges, international cooperation and space governance, space assurance and political, organizational and management aspects specific to security space strategy. The contributing authors expand their focus beyond that of the United States and explore and analyse the international developments and implications of national space strategies of Russia, China, Europe, Japan, India, Israel and Brazil. This book will be of much interest to students of space power and politics, strategic studies, foreign policy and International Relations in general.

Space Doctrine for the 21st Century Robert D. Newberry, 1997. Today there is virtually no approved space doctrine to guide the development and employment of space forces. The supporting strategies for organizing, training, equipping and employing space forces do not exist. There is no discussion of the tenets of space power or the operational art of employing space forces. Space policy has emerged to fill the doctrinal void. Policy is the major influence on the organization, training, equipping and employment of US space forces. The preeminence of policy and absence of doctrine has caused military effectiveness to be muted in the debates over space forces. Without a clear vision of what space forces should do, the Air Force has been left to build space forces in an ad hoc manner. There is no doctrinal guidance for how to achieve the offensive and defensive mix of forces called for in the national space policy and there is no approved process from which the needed doctrine can be developed. Although doctrine development follows a proscribed bureaucratic process, little consideration is given to the underlying thought process. This paper attempts to define a doctrine development process and use it to formulate a space doctrine. This doctrine includes the tenets of space power, the operational art of space warfare and

implementation strategies for space forces This doctrine can be immediately applied to ongoing space operations *Space Warfare in the 21st Century* Joan Johnson-Freese, 2016-11-08 This book examines the recent shift in US space policy and the forces that continually draw the US back into a space technology security dilemma The dual use nature of the vast majority of space technology meaning of value to both civilian and military communities and being unable to differentiate offensive from defensive intent of military hardware makes space an area particularly ripe for a security dilemma In contrast to previous administrations the Obama Administration has pursued a less militaristic space policy instead employing a strategic restraint approach that stressed multilateral diplomacy to space challenges The latter required international solutions and the United States subsequently even voiced support for an International Code of Conduct for Space That policy held until the Chinese anti satellite ASAT test in 2013 which demonstrated expanded Chinese capabilities This volume explores the issues arising from evolving space capabilities across the world and the security challenges this poses It subsequently discusses the complexity of the space environment and argues that all tools of national power must be used with some degree of balance toward addressing space challenges and achieving space goals This book will be of much interest to students of space policy defence studies foreign policy security studies and IR International Environmental Law and Policy for the 21st Century Ved Nanda, George (Rock) Pring, 2012-10-12 A significant contribution to the field and a welcome addition to the growing literature on international environmental law and an important reference for every scholar lawyer and layperson interested in the field **Space in the 21st Century** Richard S. model output as well as derived variables that incorporate the eta output variables were divided into three data sets A univariate logistic regression with the occurrence of a thunderstorm in the surface observation the truth as the dependent variable and the output derived values from the eta model as the independent variable discarded all but 94 of over 250 predictors that were considered important to thunderstorm occurrence The data sets were further divided into model building and validation sets for the purpose of building a logistic regression model Regression coefficients were developed using the model building sets and then applied to the validation sets for the purpose of forecasting a thunderstorm This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

The United States Space Force and the Future of American Space Policy Jeremy Grunert,2022-10-17 The creation of the U S Space Force triggered an outpouring of responses ranging from ridicule and derision to applause and relief to fear and concern It also raised questions about the future of conflict in outer space Through an exploration of the legal context of military space activities the history of American military space policy and Great Power space interactions during and after the Cold War The United States Space Force and the Future of American Space Policy ultimately concludes that the U S Space Force is a natural outgrowth of American space policy but is no more likely to threaten space security than previous activity in the space domain
