The Value of the Moon Paul D. Spudis, 2016-04-26 While the Moon was once thought to hold the key to space exploration in recent decades the U S has largely turned its sights toward Mars and other celestial bodies instead In *The Value of the Moon* lunar scientist Paul Spudis argues that the U S can and should return to the moon in order to remain a world leader in space utilization and development and a participant in and beneficiary of a new lunar economy Spudis explores three reasons for returning to the Moon it is close it is interesting and it is useful The proximity of the Moon not only allows for frequent launches but also control of any machinery we place there It is interesting because recorded deep on its surface and in its craters is the preserved history of the moon the sun and indeed the entire galaxy And finally the moon is useful because it is rich with materials and energy The moon Spudis argues is a logical base for further space exploration and even a possible future home for us all Throughout his work Spudis incorporates details about man s fascination with the moon and its place in our shared history He also explores its religious cultural and scientific resonance and assesses its role in the future of spaceflight and our national security and prosperity

[Development of an illumination simulation software for the Moon's surface](#) René Schwarz, 2016-12-27 The German Aerospace Center DLR is developing a new holistic optical navigation system for all stages of spacecraft planetary approach and landing procedures. The central feature of this new navigation system is its landmark-based navigation. Commonly, craters are used as landmarks as they exhibit very characteristic shapes and they are stable over the long term with respect to shape, structure, and positioning. However, the flawless perception of these surface features by computers is a non-trivial task. A possibility of generating realistic surface images of celestial bodies with a significant number of craters and with well-known local illumination conditions is essential for the development of new navigation algorithms as well as a technique for estimating the local illumination direction on these images. To date, no software exists to generate artificial renderings of realistically illuminated planetary surfaces while

determining the local solar illumination direction Having said this a surface illumination simulation software for solid planetary surfaces with a significant number of craters has been developed within a master s thesis at the Merseburg University of Applied Sciences and the German Aerospace Center DLR whereas all work has been done in the context of the Moon This software the Moon Surface Illumination Simulation Framework MSISF is the first software known to produce realistic renderings of the entire Moon s surface from virtually every viewpoint while simultaneously generating machine readable information regarding the exactly known parameters for the environmental conditions such as the local solar illumination angle for every pixel of a rendering showing a point on the Moon s surface To produce its renderings the MSISF maintains a global digital elevation model of the Moon using the latest data sets from the ongoing NASA Lunar Reconnaissance Orbiter mission The MSISF has also demonstrated its ability to not only produce single renderings but also whole series of renderings corresponding to a virtual flight trajectory or landing on the Moon The MSISF can also be modified for the rendering of other celestial bodies This book shows how these renderings will be produced and how they will be suitable for the development and testing of new optical navigation algorithms it is based upon the examination version of the original master s thesis Soviet Life ,1970-05 The Moon's Dark Legacy Adrian Ferruelo,2025-05-26 Fifty years after the last lunar mission a new crew lands on the Moon only to uncover a mystery that changes everything Strange events unexplained signals and the remnants of an ancient non human civilization force them to confront the truth they are not alone A gripping blend of science fiction mystery and human drama this novel will keep you on the edge of your seat as it explores the secrets of the Moon and the resilience of the human spirit **Public Papers of the Presidents of the United States, George W.
