Weisman, 2012-12-06 The field of Environment and Behavior This bibliography is aimed at the researcher and advanced student working in the field of environmental psychology as it has come to be designated over the past decade A more appropriate term might be environment behavior studies to suggest the important characteristic of this field as one that transcends the province of the psychologist and brings together workers as well as problems methods and concepts from a great diversity of disciplines and professional fields Among these we may include geography and sociology architecture landscape architecture and planning forestry natural resource management and leisure and recreation research to name only the most important of the diverse fields from which material for this bibliography has been drawn This is in fact one of the primary reasons for our belief in the value of such a volume The literature in the environment behavior field is scattered through the most diverse sources including not only the major periodical and monographic literature in each of the above mentioned disciplines and professions and others as well but also a variety of more specialized publications of varying degrees of accessibility Thus it seemed to us helpful to the researcher teacher and student in this area to bring this far flung literature together in a single volume that might be used as a guide to the field We aimed at a comprehensive treatment including both basic and applied aspects and relations of behavior both to the man made or artificial and to the natural environment **Space Planning Basics** Mark Karlen, 2009-05-04 The book provides tools for visualizing space and walks the designer through other considerations such as building code requirements and environmental control needs
