Space Search:

State-Space Search Weixiong Zhang, 1999-10-14 This book is particularly concerned with heuristic state space search for combinatorial optimization Its two central themes are the average case complexity of state space search algorithms and the applications of the results notably to branch and bound techniques Primarily written for researchers in computer science the author presupposes a basic familiarity with complexity theory and it is assumed that the reader is familiar with the basic concepts of random variables and recursive functions Two successful applications are presented in depth one is a set of state space transformation methods which can be used to find approximate solutions quickly and the second is forward estimation for constructing more informative evaluation functions **Multiobjective Heuristic Search** Pallab Dasgupta, P. P.

Chakrabarti, S. C. DeSarkar, 2013-11-11 A large number of problems require the optimization of multiple criteria These criteria are often non commensurate and sometimes conflicting in nature making the task of optimization more difficult In such problems the task of creating a combined optimization function is often not easy Moreover the decision procedure can be affected by the sensitivity of the solution space and the trade off is often non linear In real life we traditionally handle such problems by suggesting not one but several non dominated solutions Finding a set of non dominated solutions is also useful in multistaged optimization problems where the solution of one stage of optimization is passed on to the next stage One classic example is that of circuit design where high level synthesis logic synthesis and layout synthesis comprise important stages of optimization of the circuit Passing a set of non dominated partial solutions from one stage to the next typically ensures better global optimization This book presents a new approach to multi criteria optimization based on heuristic search techniques Classical multicriteria optimization techniques rely on single criteria optimization algorithms and hence we are either required to optimize one criterion at a time under constraints on the others or we are asked for a single scalar combined optimization function On the other hand the multiobjective search approach maps each optimization criterion onto a distinct dimension of a vector valued cost structure Search-Based Software Engineering Márcio Barros, Yvan

Labiche, 2015-07-27 This book constitutes the refereed proceedings of the 7th International Symposium on Search Based Software Engineering SSBSE 2015 held in Bergamo Italy in September 2015 The 12 revised full papers presented together with 2 invited talks 4 short papers 2 papers of the graduate track and 13 challenge track papers were carefully reviewed and selected from 51 submissions Search Based Software Engineering SBSE studies the application of meta heuristic optimization techniques to various software engineering problems ranging from requirements engineering to software testing and maintenance *Artificial Intelligence Through Search* Chris Thornton, Benedict Du Boulay, 2012-12-06 This is an important textbook on artificial intelligence that uses the unifying thread of search to bring together most of the major techniques used in symbolic artificial intelligence The authors aware of the pitfalls of being too general or too academic have taken a practical approach in that they include program code to illustrate their ideas Furthermore code is offered in both

POP 11 and Prolog thereby giving a dual perspective highlighting the merits of these languages Each chapter covers one technique and divides up into three sections a section which introduces the technique and its usual applications and suggests how it can be understood as a variant generalisation of search a section which developed a low level POP 11 implementation a section which develops a high level Prolog implementation of the technique The authors also include useful notes on alternative treatments to the material further reading and exercises As a practical book it will be welcomed by a wide audience including those already experienced in AI students with some background in programming who are taking an introductory course in AI and lecturers looking for a precise professional and practical text book to use in their AI courses

About the authors Dr Christopher Thornton has a BA in Economics and a Sc in Computer Science and a DPhil in Artificial Intelligence Formerly a lecturer in the Department of AI at the University of Edinburgh he is now a lecturer in AI in the School of Cognitive and Computing Sciences at the University of Sussex Professor Benedict du Boulay has a BSc in Physics and a PhD in Artificial Intelligence Previously a lecturer in the Department of Computing Science at the University of Aberdeen he is currently Professor of Artificial Intelligence also in the School of Cognitive and Computing Sciences University of Sussex

Constraint Processing Rina Dechter, 2003-05-22 Constraint satisfaction is a simple but powerful tool Constraints identify the impossible and reduce the realm of possibilities to effectively focus on the possible allowing for a natural declarative formulation of what must be satisfied without expressing how The field of constraint reasoning has matured over the last three decades with contributions from a diverse community of researchers in artificial intelligence databases and programming languages operations research management science and applied mathematics Today constraint problems are used to model cognitive tasks in vision language comprehension default reasoning diagnosis scheduling temporal and spatial reasoning In Constraint Processing Rina Dechter synthesizes these contributions along with her own significant work to provide the first comprehensive examination of the theory that underlies constraint processing algorithms Throughout she focuses on fundamental tools and principles emphasizing the representation and analysis of algorithms Examines the basic practical aspects of each topic and then tackles more advanced issues including current research challenges Builds the reader's understanding with definitions
