Critical Issues in the History of Spaceflight

Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experience Amazon Space Weapons (Star Wars), 1985

Space as a Strategic Asset

Joan Johnson-Freese, 2007 Joan Johnson Freese argues that the race for space weapons and the U S quest for exclusive or at least dominant ownership of strategic space assets have alienated the very allies that the United States needs in order to maintain its leading role in space exploration Taking a balanced look at the issues that have contributed to the decline of America's manned space program such as lack of political support and funding Johnson Freese offers not only a critique but also a plan for enhancing U S space security through cooperation rather than competition She begins with a brief overview of the history of international space development through four eras before Sputnik the space race after Apollo and globalization Then she focuses on how policy changes of the mid 1990s have changed the nation examining why the United States has grown obsessed with the development of space technology not just as a tool for globalization but as a route toward expanding an already dominant arsenal of weapons Johnson Freese claims that these policy choices have greatly affected the attitudes and actions of other countries and in the fight to achieve security the United States has instead put itself at greater peril Johnson Freese explains complex technical issues in clear accessible terms and suggests a way forward that is comprehensive rather than partisan America is not the only country with space ambitions but it is unique in viewing space as a battlefield and the technological advancements of other nations as a dire threat Urgent and persuasive **Space as a Strategic Asset** underscores the danger of allowing our space program to languish and the crucial role of cooperation in protecting the security of our country and the world

Air & Space Power Journal fall 02 , Original Sin Bleddyn E. Bowen, 2023-01-01 Space technology was developed to enhance the killing power of the state The Moon landings and the launch of the Space Shuttle were mere sideshows drawing public attention away from the real goal military and economic control of space as a source of power on Earth Today as Bleddyn E Bowen vividly recounts thousands of satellites work silently in the background to provide essential military intelligence and economic capabilities No major power can do without them Beyond Washington Moscow and Beijing truly global technologies have evolved from the ground floor of the nuclear missile revolution to today s orbital battlefield shaping the wars to come World powers including India Japan and Europe are fully realizing the strategic benefits of commanding Earth s cosmic coastline as a stage for war development and prestige Yet as new contenders spend more and more on outer space there is scope for cautious optimism about the future of the Space Age if we can recognize rather than hide its original sin
