Shape and Size are considered concurrently for spatial relevance. A space, irrespective of the size, can have many different shapes.

The SIZE relates to the human body, and reflects the work capacities and duration required for domesticating a space. Sizes, as abstract entities, offer scaling, proportions, analogy, sequencing, proximity, etc. Size of a space is perceived for ergonomic facilitation, anthropometric adequacy, tasks conduction, social interaction, degree of distancing for social interaction, intimacy and privacy, security, cognition, physical and cognitive reach, communication and expression.

The SHAPES have primary identity relating to the gravity, like vertical, horizontal or inclination, but also directional peculiarities due to the differential sizes. Size is perceived as the difference between the Length and Width of a space. The height (gravity) confers its own scale of narrowness or broadness to the space. Height accentuates or de-emphasizes the character of the space nominally contributed by the relation between the Length and the Width. The orientation of smaller or larger size gives a feel of a deep and shallow space. All these terms also give a sense of direction (long vs short) in the space.

A space is considered small (narrow), if one of its horizontal-spread dimensions (either L or W) is proportionately smaller. The orientation of smaller or larger size gives a feel of a deep and shallow space. The terms (L W H) give a sense of direction in the space.

- Tall, is a height identity and Deep is frontal distance distinction.
- Narrow spaces have one of the floor dimensions (width or length) proportionately smaller. Spaces with a strong linear (directional) character seems narrower. Taller spaces seem narrower compared to a shallow (low height) space with the same floor spread.
- A wide space is very ambiguous a term. All large sized spaces are also wide spaces, because here both the dimensions are functionally more than adequate.

Dr. Martin Concoyle

Spaces Shapes And Sizes:

Spaces, Shapes, and Sizes Jane Jonas Srivastava, Loretta Lustig, 1980-01-01 Explains in simple terms the concept of volume
The Shape of Space Graham Nerlich, 1994-08-04 This is a revised and updated edition of Graham Nerlich's classic book 1976 It develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories Arguing that geometrical explanation is very like causal explanation Professor Nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently Along the way Professor Nerlich criticizes and rejects conventionalism as a non realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion

Describing the Dynamics of "Free" Material Components in Higher-Dimensions Dr. Martin Concoyle, 2014 The issue which the new ideas of these new books really raise with our culture is not about whether they are true since these new ideas identify a valid context for physical description and whereas the current context for math and physics 2014 cannot do that ie they cannot describe the stable properties of a general many but few body system Whereas the new ideas about math and physics can be used to solve the most fundamental problems about the physical world in regard to understanding physical stability a problem which the current descriptive context of math and physics 2014 cannot solve That is what now in 2014 passes for math and physics knowledge are delusions Yet these delusions are the ideas expressed in our propaganda education system about math and physics Rather The real issue which these new ideas present to our culture is about our cultural relation to what is beyond the material world That is it is about our cultural representation of religion or the spirit In particular in relation to the previous knowledge humans needed to possess in order to make Gobekli tepe Puma Punku Stonehenge etc ie simply to be able to lift and position such large stones as well as the understanding which is needed to go beyond the context of the material world and into the context of all the ancient mythologies in regard to the ancient religious stories etc etc The current paradigm in 2014 describes a general state of indefinable randomness in which there is always a chaotic transitioning process which exists as random elementary particle collisions and which supposedly is perpetually occurring Thus their description of the wide range of the generally stable states of the many but few body systems into which this forever chaotically transitioning process supposedly settles but explicit descriptions of this process do not exist Instead their answer is that such stable many but few body systems are too complicated to describe

Computational Approaches to Archaeological Spaces Andrew Bevan, Mark Lake, 2016-06-16 This volume of original chapters written by experts in the field offers a snapshot of how historical built spaces past cultural landscapes and archaeological distributions are currently being explored through computational social science It focuses on the continuing importance of spatial and spatio temporal pattern recognition in the archaeological record considers more wholly model based approaches that fix ideas and build theory and addresses those applications where situated human experience and perception are a core interest Reflecting the changes in computational technology over the past decade the authors bring in examples from historic and prehistoric sites in Europe Asia and the Americas to demonstrate the variety of applications available to the contemporary researcher

Captain Invincible and the Space Shapes Stuart J. Murphy, 2001-08-21 Captain Invincible and his intrepid space dog Comet are on a perilous journey back to Earth Throughout their mission the fearless captain and his canine

sidekick encounter asteroids poisonous gas and alien beings But will their knowledge of three dimensional shapes including cubes cones and pyramids help our heroes navigate past these obstacles and make it safely home *Shape Grammar and Space Syntax Approach in Contextual Design* Neeta Lambe,2024-02-06 The book is an attempt to present a logical approach to contextual design With a lot of buzz around sustainability architects analyze contexts in detail to propose sustainable designs Hence the contextual design approach is gaining importance in architectural practice Architects and designers are always inclined to adopt an intuitive approach to design in historical contexts or surroundings with peculiar characteristics There is no specific methodical approach to design in such contexts apart from the ability to identify cues from the surrounding through experience This book presents a sequential framework wherein one can analyze synthesize and generate design genotypes based on the inbuilt spatial grammar of the context The shape grammar concept as a generative tool is presented to identify the spatial constructs grammar which acts as a cue for design genotypes Space syntax is explored as an analysis tool to evaluate the sympathetic spatial fitness of generated design genotypes The book establishes that the framework is logical in its methodical approach and would generate design genotypes which would help architects and designers have design interventions in in fill development to achieve congruence with the surrounding environment

Course of Study [in] Art Education Detroit Public Schools,1925 **The Theory of Sprays and Finsler Spaces with Applications in Physics and Biology** P.L. Antonelli,Roman S. Ingarden,M. Matsumoto,2013-03-09 The present book has been written by two mathematicians and one physicist a pure mathematician specializing in Finsler geometry Makoto Matsumoto one working in mathematical biology Peter Antonelli and a mathematical physicist specializing in information thermodynamics Roman Ingarden The main purpose of this book is to present the principles and methods of sprays path spaces and Finsler spaces together with examples of applications to physical and life sciences It is our aim to write an introductory book on Finsler geometry and its applications at a fairly advanced level It is intended especially for graduate students in pure mathematics science and applied mathematics but should be also of interest to those pure Finslerists who would like to see their subject applied After more than 70 years of relatively slow development Finsler geometry is now a modern subject with a large body of theorems and techniques and has mathematical content comparable to any field of modern differential geometry The time has come to say this in full voice against those who have thought Finsler geometry because of its computational complexity is only of marginal interest and with practically no interesting applications Contrary to these outdated fossilized opinions we believe the world is Finslerian in a true sense and we will try to show this in our application in thermodynamics optics ecology evolution and developmental biology On the other hand while the complexity of the subject has not disappeared the modern bundle theoretic approach has increased greatly its understandability *Space Architecture* Neil Leach,2015-01-12 Forty years on from the first moon landing architecture in Space is entering a new era Over the last decade there has been a fundamental shift in the Space industry from short term pioneering expeditions to long

term planning for colonisation and new ventures such as Space tourism Architects are now involved in designing the interiors of long term habitable structures in Space such as the International Space Station researching advanced robotic fabrication technologies for building structures on the Moon and Mars envisioning new space yachts for the super rich and building new facilities such as the Virgin Galactic Spaceport America in New Mexico designed by Foster Partners Meanwhile the mystique of Space remains as alluring as ever as high profile designers and educators such as Greg Lynn are running design studios drawing upon ever more inventive computational design techniques This issue of AD features the most significant current projects underway and highlights key areas of research in Space such as energy materials manufacture and robotics It also looks at how this research and investment in new technologies might transfer to terrestrial design and construction Space architects Constance Adams Marc Cohen Ondrej Doule Sandra Huplik Meusburger Scott Howe Brent Sherwood Madhu Thangavelu Andreas Vogler Robert Zubrin Architects Bevk Perovic Arhitekti Dekleva Gregoric Arhitekti Foster Partners Neil Leach Greg Lynn OFIS architects SADAR VUGA

Mathematics for Children with Severe and Profound Learning Difficulties Les Staves, 2013-12-19 The book will covers a wide range of approaches to teaching and learning and demonstrates how mathematics can be related to personal and social development communication and thinking skills Written with the non specialist in mind and including plenty of practical examples it will make useful reading for teachers in mainstream and special schools and learning support assistants Early years practitioners and teachers in training may find the book useful for its descriptions of how children acquire their foundation of early mathematics and numeracy skills
