Head Start's goal has been to boost the school readiness of low income children. Based on a whole child model, the program provides comprehensive services that include pre-school education, medical, dental, and mental health care, nutrition services, and efforts to help parents foster their child's development. Head Start services are designed to be responsive to each child's and family's ethnic, cultural, and linguistic heritage. The Congressionally mandated Head Start Impact Study was conducted across 84 nationally representative grantee/delegate agencies. Approximately 5,000 newly entering 3 and 4 year old children applying for Head Start were randomly assigned to either a Head Start group that had access to Head Start program services or to a non-Head Start group that could enrol in available community non-Head Start services selected by their parents. Data collection began in fall 2002 and is scheduled to continue through 2006, following children through the spring of their 1st grade year. The study quantifies the impact of Head Start separately for 3 and 4 year old children across child cognitive, social, emotional, and health domains, as well as on parenting practices. This book is essential reading for those in the education field.
