Uncertainty in Geographical Information Jingxiong Zhang,Michael F. Goodchild,2002-03-29 As Geographic Information Systems GIS develop there is a need to demystify the complex geographical world to facilitate computerization in GIS by the inaccuracies that emerge from man machine interactions in data acquisition and by error propagation in geoprocessing Users need to be aware of the impacts of uncertainties in spatial analysis and decision making Uncertainty in Geographical Information discusses theoretical and practical aspects of spatial data processing and uncertainties and covers a wide range of types of errors and fuzziness and emphasizes description and modeling High level GIS professionals researchers and graduate students will find this a constructive book   Handbook of Erosion Modelling R. P. C. Morgan,Mark Nearing,2016-04-13 The movement of sediment and associated pollutants over the landscape and into water bodies is of increasing concern with respect to pollution control prevention of muddy floods and environmental protection In addition the loss of soil on site has implications for declining agricultural productivity loss of biodiversity and decreased amenity and landscape value The fate of sediment and the conservation of soil are important issues for land managers and decision makers In developing appropriate policies and solutions managers and researchers are making greater use of erosion models to characterise the processes of erosion and their interaction with the landscape A study of erosion requires one to think in terms of microseconds to understand the mechanics of impact of a single raindrop on a soil surface while landscapes form over periods of thousands of years These processes operate on scales of millimetres for single raindrops to mega metres for continents Erosion modelling thus covers quite a lot of ground This book introduces the conceptual and mathematical frameworks used to formulate models of soil erosion and uses case studies to show how models are applied to a variety of purposes at a range of spatial and temporal scales The aim is to provide land managers and others with the tools required to select a model appropriate to the type and scale of erosion problem to show what users can expect in terms of accuracy of model predictions and to provide an appreciation of both the advantages and limitations of models Problems covered include those arising from agriculture the construction industry pollution and climatic change and range in scale from farms to small and large catchments The book will also be useful to students and research scientists as an up to date review of the state of art of erosion modelling and through a knowledge of how models are used in practice in highlighting the gaps in knowledge that need to be filled in order to develop even better models   *Wetland and Environmental Applications of GIS* John G. Lyon,Jack McCarthy,1995-09-18 This new book presents powerful techniques that can be used to address issues and problems related to wetlands and surface waters It is the first book of its kind to address inventory and management of wetlands and water quality problems using GIS and remote sensing technologies Wetland and Environmental Applications of GIS describes a variety of techniques applications and case studies for evaluating wetland and surface water characteristics at the landscape scale The book details wetland and environmentally oriented surface water resource studies using spatial and spectral based technologies such as GIS remote sensing computer modeling and image display Introductory material is

included in the first section to provide a common background and to refresh or introduce concepts to the professional The second section details applications of these technologies in studies of wetlands including the use of GIS and archival satellite data in evaluating and measuring sediment types water depth and environmental change in the coastal wetlands of the Great Lakes The third section addresses various environmental applications of GIS such as locating non point pollution sources and managing oil spills The final section supplies additional information and applications with particular emphasis on potential contributions of remote sensing **Spatial Data Analysis With R** Danlin Yu,2025-03-11 This is an introduction for social science students to the growing field of spatial data analysis using the R platform The text assumes no prior knowledge of either beyond the contents of an introductory statistics course It uses the open source software R and relevant spatial data analysis packages to provide practical guidance of how to conduct spatial data analysis with readers own data sets The book first briefly introduces students to R covers some basic concepts in statistical data analysis and then focuses on discussing the central ideas of spatial data analysis All the discussions are supported with R scripts so that students can work on their own and produce results that the book helps interpret Each chapter ends with review questions to test understanding The book is suited for upper level undergraduate social science students and graduate students and other social scientists who are interested in analyzing their spatial data with R A companion website for the book can be found on the Resources tab above It includes R code and data for students to replicate the examples in the book The password protected instructor side of the site includes exercises and answers which can be set for homework **Environmental Criminology** Martin A. Andresen,2019-10-08 The field of environmental criminology is a staple theoretical framework in contemporary criminological theory This fully revised and expanded edition of the world s first comprehensive and sole authored textbook on this influential school of criminological thought covers a wide range of topics including the origins of environmental criminology the primary theoretical frameworks such as routine activity theory geometry of crime rational choice theory and the pattern theory of crime the practical application of environmental criminology an examination of how theories are operationalized and tested and policy implications for the practice of crime prevention As well as these popular topics Martin Andresen also discusses a number of topics that are at the leading edge of research within environmental criminology New to the second edition are chapters on empirical support for the various models of crime prevention covered and on the growing literature on the journey to crime This text will be ideal for courses on crime prevention where students are often encouraged to consider policy problems and apply theory to practice This book offers up environmental criminology as a theoretical framework for making sense of complex neighborhood problems so it is also perfect for courses on geography of crime crime analysis and indeed environmental criminology It would also be a good supplement for courses on criminological theory **Adaptive Method of Lines** A. Vande Wouwer,Ph. Saucez,W.E. Schiesser,2001-04-18 The general Method of Lines MOL procedure provides a flexible format for the solution of all the major classes of partial differential equations PDEs

New Publications ,1997   *Numerical Solution of Time-Dependent Advection-Diffusion-Reaction Equations* Willem Hundsdorfer,Jan G. Verwer,2013-04-17 This book deals with numerical methods for solving partial differential equa tions PDEs coupling advection diffusion and reaction terms with a focus on time dependency A combined treatment is presented of methods for hy perbolic problems thereby emphasizing the one way wave equation meth ods for parabolic problems and methods for stiff and non stiff ordinary dif ferential equations ODEs With regard to time dependency we have at tempted to present the algorithms and the discussion of their properties for the three different types of differential equations in a unified way by using semi discretizations i e the method of lines whereby the PDE is trans formed into an ODE by a suitable spatial discretization In addition for hy perbolic problems we also discuss discretizations that use information based on characteristics Due to this combination of methods this book differs substantially from more specialized textbooks that deal exclusively with nu merical methods for either PDEs or ODEs We treat integration methods suitable for both classes of problems This combined treatment offers a clear advantage On the one hand in the field of numerical ODEs highly valuable methods and results exist which are of practical use for solving time dependent PDEs something which is often not fully exploited by numerical PDE researchers Although many problems can be solved by Euler s method or the Crank Nicolson method better alter natives are often available which can significantly reduce the computational effort needed to solve practical problems   **GIS and Environmental Modeling** Michael F.
