Modelling Scale in Geographical Information Science Nicholas Tate, Peter M. Atkinson, 2001-12-05 Scale has long been a fundamental concept in geography Its importance is emphasised in geographical information science GIScience where the computational domain necessitates the rigorous definition and handling of scale Geographical information systems are now used in almost every walk of life but scale is often handled poorly in such systems Modelling Scale in Geographical Information Science is written by an international team of contributors drawn from both industry and academia and considers models and methods of scaling spatial data in both human and physical systems Divided into three sections to give a balanced coverage of the key problems tools and models associated with scale Fractal Models The Modifiable Areal Unit Problem Changing the Scale of Measurement This book is an essential read for all GIScience researchers advanced students and practitioners who want to delve more deeply into the scale issues of the spatial data and spatial models that form the basis of their analyses *GIS, Environmental Modeling and Engineering* Allan Brimicombe, 2009-12-23 Spatial dimensions need to be properly captured if modeling and engineering techniques are to be successfully applied in addressing environmental problems The links between the geographical information systems GIS that capture this data simulation modeling and engineering offer tremendous possibilities for building versatile support systems for

Spatial Analytical Manfred M Fischer,1996-12-13 The ability to manipulate spatial data in different forms and to extract additional meaning from them is at the heart of GIS yet genuine spatial analysis tools are rarely incorporated into commercial software thus seriously limiting their usefulness The future of GIS technology will depend largely on the incorporation of more powerful analytical and modelling functions and there is agreement within the GIS community of the urgent need to address these issues This text attempts this task It presents the latest information on incorporating spatial analysis tools into GIS and includes concepts and applications from both the environmental and socio economic sciences

Geospatial Analysis and Modelling of Urban Structure and Dynamics Bin Jiang,Xiaobai Yao,2010-06-16 A Coming of Age Geospatial Analysis and Modelling in the Early Twenty First Century Forty years ago when spatial analysis first emerged as a distinct theme within geography's quantitative revolution the focus was largely on consistent methods for measuring spatial correlation The concept of spatial autocorrelation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics Early applications of spatial correlation tended to reflect geographical patterns expressed as points The perspective taken on such analytical thinking was founded on induction the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested In parallel but using very different techniques came the development of a more deductive style of analysis based on modelling and thence simulation Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often combining both in different mixes for the variety of problems to which it is now applied

Hydrology V.P. Singh, M. Fiorentino, 2013-03-09 The last few years have witnessed an enormous interest in application of GIS in hydrology and water resources This is partly evidenced by organization of several national and international symposia or conferences under the sponsorship of various professional organizations This increased interest is in a large measure in response to growing public sensitivity to environmental quality and management The GIS technology has the ability to capture store manipulate analyze and visualize the diverse sets of geo referenced data On the other hand hydrology is inherently spatial and distributed hydrologic models have large data requirements The integration of hydrology and GIS is therefore quite natural The integration involves three major components 1 spatial data construction 2 integration of spatial model layers and 3 GIS and model interface GIS can assist in design calibration modification and comparison of models This integration is spreading worldwide and is expected to accelerate in the foreseeable future Substantial opportunities exist in integration of GIS and hydrology We believe there are enough challenges in use of GIS for conceptualizing and modeling complex hydrologic processes and for globalization of hydrology The motivation for this book grew out of the desire to provide under one cover a range of applications of GIS technology in hydrology It is hoped that the book will stimulate others to write more comprehensive texts on this subject of growing importance

Life and Motion of Socio-Economic Units

Andrew Frank, Jonathan Raper, J. P. Cheylan, 2003-09-02 One of the ongoing problems researchers in geography and GIS have is studying data that is inherently spatial over a long period of time One of the main hurdles they have to overcome is the study of groups of people classified by their socio economic status one of the main means for governments companies and

research organisations to group together segments of the population The amount of data collected by governments business and research organisations has increased markedly in recent years Geographic Information Systems have been more widely used than ever before for the storage and analysis of this information Most GIS can handle this information spatially rather than temporally and have difficulty with the management of socio economic time series which relate to spatial units Accordingly this book covers the issues ranging from the formal model to differentiate aspects of spatio temporal data through philosophical and fundamental reconsideration of time and space to the development of practical solutions to the problem This book draws together an interdisciplinary group of scientists in the field of geography computing surveying and philosophy It presents the definitive sourcebook on temporal GIS as applied to socio economic units *Uncertainty and Context in GIScience and Geography* Yongwan Chun, Mei-Po Kwan, Daniel A. Griffith, 2021-05-13 Uncertainty and context pose fundamental challenges in GIScience and geographic research Geospatial data are imbued with errors e g measurement and sampling and various types of uncertainty that often obfuscate any understanding of the effects of contextual or environmental influences on human behaviors and experiences These errors or uncertainties include those attributable to geospatial data measurement model specifications delineations of geographic context in space and time and the use of different spatiotemporal scales and zonal schemes when analyzing the effects of environmental influences on human behaviors or experiences In addition emerging sources of geospatial big data including smartphone data data collected by GPS and various types of wearable sensors e g accelerometers and air pollutant monitors volunteered geographic information and or location based social media data i e crowd sourced geographic information inevitably contain errors and their quality cannot be fully controlled during their collection or production Uncertainty and Context in GIScience and Geography Challenges in the Era of Geospatial Big Data illustrates how cutting edge research explores recent advances in this area and will serve as a useful point of departure for GIScientists to conceive new approaches and solutions for addressing these challenges in future research The seven core chapters in this book highlight many challenges and opportunities in confronting various issues of uncertainty and context in GIScience and geography tackling different topics and approaches The chapters in this book were originally published as a special issue of the International Journal of Geographical Information Science
