The Physics of Skiing David A. Lind, Scott P. Sanders, 2013-06-29 Just over ten years ago when the first drafts of this book were being written and even more so a few years after that as it was making its way through the publication process alpine skiing was experiencing what eventually became a complete revolution in equipment and technique shaped or parabolic skis completely took over the market and even relatively beginning skiers expected to carve graceful turns as they schussed down the slopes Re-reading our work with an eye to revision we have been surprised to see how our focus on the physics of skiing in the first edition allowed us to recognize the fundamental importance of what were then quite novel changes in equipment and technique The essence of the enhancement offered by shaped skis is their greater sidecut radius Our original discussion then and now in Chapters 3 and 4 of the crucial role that a ski's sidecut plays in carving a turn caused us to write for the most part as if the shaped ski had always been in existence Similarly our interest in the geometry of the sidecut allowed us to discuss snowboards in some detail as well for the key to their ability to shred down the mountain is their deep sidecut

Science and Skiing

E. Kornexl, E. Muller, C. Raschner, H. Schwameder, 2003-09-02

The first International Congress on Science and Skiing was held in Austria in January 1996. The main aim of the conference was to bring together original key research in this area and provide an essential update for those in the field. The link between theory and practice was also addressed, making the research more applicable for both researchers and coaches. This book is divided into five parts, each containing a group of papers that are related by theme or disciplinary approach. They are as follows: Biomechanics of Skiing, Fitness testing and Training in Skiing, Movement Control and Psychology in Skiing, Physiology of Skiing, and Sociology of Skiing. The conclusions drawn from the conference represent an invaluable practical reference for sports scientists, coached skiers, and all those involved in this area.

Health and performance assessment in winter sports - volume II Thomas Leonhard Stöggli, Kamiar Aminian, Jörg

Spörri, 2023-05-26

Ski Resorts World Wide

Ava Thompson, 2024-11-17

Ski Resorts World Wide delivers a groundbreaking global perspective on the transformation of skiing from basic transportation to a thriving international leisure industry. This comprehensive analysis examines over 500 ski resorts across 49 countries, offering unique insights into

how geography climate patterns and economic factors shape successful winter sports destinations worldwide The book combines detailed research from multiple disciplines including climatology tourism economics and environmental science to explore three critical aspects resort development across six continents climate impacts on operations and economic dynamics driving the global ski industry Through a blend of quantitative data and qualitative insights from industry experts readers gain unprecedented access to previously unpublished information about international ski destinations and their operations Progressing through four major sections from Natural Resources and Geography to Future Trends and Sustainability the book offers practical value for diverse audiences Resort managers investors and ski enthusiasts will appreciate the detailed analysis of resort infrastructure market dynamics and operational challenges The inclusion of case studies statistical data and expert interviews provides readers with actionable insights for resort selection timing of visits and understanding the complex interplay between natural conditions and successful ski destination development Human Movement and Motor Control in the Natural Environment Peter A Federolf, Maurice Mohr, Thorsten Stein, Gert-Jan Pepping, Steven van Andel, Gillian Weir, 2023-06-08 The basic understanding of human movement and control of human movement stems largely from laboratory measurements where human movement can be quantified with high precision and accuracy but where the artificial environment compromises ecological validity A good example for this issue was demonstrated in a recent investigation specifically that the walking gait pattern of healthy individuals in a laboratory changed as a function of how many researchers were present during the experiment Observations like these underscore that study volunteers adapt their behavior to the specific laboratory environment and warrant the question of how well we can transfer our lab based understanding of gait patterns and the underlying neuromuscular control system to walking during daily living Another research area where lab based movement assessments have led to conflicting findings is the field of sports injury prevention Many neuromuscular training programs have been shown to be effective in reducing the sport injury rate in athletes by 30 50% or more in a variety of different multi directional sports Nevertheless lab based assessments of the same athletes who completed those training programs were often not able to detect improvements in motor control of sport specific movements or a reduction in joint loading two factors thought to be closely linked with sport injury risk This disconnect suggests that lab based assessments of movement and motor control are often poor indicators of player behavior during real game scenarios and may limit our ability to screen athletes for injury risk or monitor their progress in rehabilitation These examples highlight that we should strive for the assessment and investigation of human movement and motor control in natural environments i e where individuals patients athletes or other groups of interest perform explore and interact under real world conditions
