This paper reviews some of the important technical barriers that must be overcome to achieve truly efficient flying adaptive
micro air vehicles MAVs As defined by the Defense Advanced Research Agency DARPA MAVs are vehicles with no length
dimension greater than 6 inches These vehicles typically weigh less than 100 grams and some can fly for approximately 30
minutes Over the past decade significant progress has been made in developing these small scale mechanical flying machines
However there is still much work to be done if these vehicles are to approach the efficiency and performance of biological
fliers This paper reviews the status of current miniature mechanical flying machines and compares their performance with
common biological flyers such as birds and small insects This comparison reveals that advances in aerodynamic efficiency
