Soviet Space:

Race Into Space Brian Harvey, 1988 *Into the Cosmos* James T. Andrews, Asif A. Siddiqi, 2011-09-25 The launch of the Sputnik satellite in October 1957 changed the course of human history In the span of a few years Soviets sent the first animal into space the first man and the first woman These events were a direct challenge to the United States and the capitalist model that claimed ownership of scientific aspiration and achievement The success of the space program captured the hopes and dreams of nearly every Soviet citizen and became a critical cultural vehicle in the country's emergence from Stalinism and the devastation of World War II It also proved to be an invaluable tool in a worldwide propaganda campaign for socialism a political system that could now seemingly accomplish anything it set its mind to *Into the Cosmos* shows us the fascinating interplay of Soviet politics science and culture during the Khrushchev era and how the space program became a binding force between these elements The chapters examine the ill fitted use of cosmonauts as propaganda props the manipulation of gender politics after Valentina Tereshkova's flight and the use of public interest in cosmology as a tool for promoting atheism Other chapters explore the dichotomy of promoting the space program while maintaining extreme secrecy over its operations space animals as media darlings the history of Russian space culture and the popularity of space themed memorabilia that celebrated Soviet achievement and planted the seeds of consumerism *Soviet Space Programs, 1976-80: Manned space programs and space life sciences*, 1982 ***Soviet Space Programs, 1976-80 (with Supplementary Data Through 1983)***, 1984 *Soviet Space Programs: Organization, Plans, Goals, and International Implications* United States. Congress. Senate. Aeronautical and Space Sciences, 1962 *The Soviet Space Race with Apollo* Asif A. Siddiqi, 2000 Winner of the Emme Award for Astronautical Literature 2001 The essential reference work for Soviet Russian space history for anyone hoping to make sense of the too many truths of Soviet Space history *Journal of Military History* We finally have a definitive English language history covering the first three decades of the Soviet Union's space program Sixteen years in the making Asif Siddiqi's amazingly detailed book provides a kaleidoscopic view of the technical and political evolution of Soviet missile and space projects a veritable gold mine of factual information *Air Power History* An extraordinary volume This is not simply an account of one side of the space race It is nothing less than the first full scale detailed explanation of how and why the Soviet Union led the world into space It belongs on the shelf of every historian with an interest in flight technology and politics the Cold War or any one of a score of related topics *The Public Historian* No space buff's library will be complete without this book Readers will marvel at the complex interactions between design bureaus and will enjoy getting to know the people behind the failed Soviet effort a vital step toward putting Apollo's victory in context *Smithsonian Air and Space* Absolutely mandatory on the bookshelf of anyone interested in space *Encyclopedia Astronautica* First published by NASA in 2000 as *Challenge to Apollo* these two volumes are the first comprehensive history of the Soviet manned space programs covering a period of thirty years from the end of World War II when the Soviets captured German rocket technology to the

collapse of their moon program in the mid 1970s The spectacular Soviet successes of Sputnik the first Earth satellite 1957 and Yuri Gagarin the first man in space 1961 shocked U S leaders and prompted President John F Kennedy to set the goal of landing a man on the moon before the end of the 1960s The moon race culminated with the historic landing of Neil Armstrong and Buzz Aldrin on the moon in 1969 coincidentally the first Soviet unmanned moon probe crashed on its surface while the American astronauts were at Tranquility Base The epic story of the Soviet space program remained shrouded in secrecy until the unprecedented opening of top secret documents Based almost entirely on these Russian language sources and numerous interviews with veterans Siddiqi s book breaks through the rumors hearsay and speculation that characterized books on the Soviet space program published during the Cold War years Supplementing the text with dozens of previously classified photographs he weaves together the technical political and personal history of the major Soviet space programs providing the other side of the history of human space flight Asif A Siddiqi is a Ph D candidate in history at Carnegie Mellon University *The Politics of Space* William H. Schauer, 1976 *Nation-Building and Identity in the Post-Soviet Space* Rico Isaacs, Abel Polese, 2016-04-14 Nation building as a process is never complete and issues related to identity nation state and regime building are recurrent in the post Soviet region This comparative inter disciplinary volume explores how nation building tools emerged and evolved over the last twenty years Featuring in depth case studies from countries throughout the post Soviet space it compares various aspects of nation building and identity formation projects Approaching the issue from a variety of disciplines and geographical areas contributors illustrate chapter by chapter how different state and non state actors utilise traditional instruments of nation construction in new ways while also developing non traditional tools and strategies to provide a contemporary account of how nation formation efforts evolve and diverge **Soviet Union** , 1965

The Wrong Stuff John Strausbaugh,2024-06-04 A witty deeply researched history of the surprisingly ramshackle Soviet space program and how its success was more spin than science In the wake of World War II with America ascendant and the Soviet Union devastated by the conflict the Space Race should have been over before it started But the underdog Soviets scored a series of victories starting with the 1957 launch of Sputnik and continuing in the years following that seemed to achieve the impossible It was proof it seemed that the USSR had manpower and collective will that went beyond America s material advantages They had asserted themselves as a world power But in The Wrong Stuff John Strausbaugh tells a different story These achievements were amazing yes but they were also PR victories as much as scientific ones The world saw a Potemkin spaceport the internal facts were much sloppier less impressive more dysfunctional The Soviet supply chain was a disaster and many of its machines barely worked The cosmonauts aboard its iconic launch of the Vostok 1 rocket had to go on a special diet and take off their space suits just to fit inside without causing a failure Soviet scientists under intense government pressure had essentially made their rocket out of spit and band aids and hurried to hide their work as soon as their worldwide demonstration was complete With a witty eye for detail and a gift for storytelling John Strausbaugh takes us behind the Iron Curtain and shows just how little there was to find there

up to the end of the 1980s One important theme explored is the degree to which the Soviet space programme was oriented towards military capabilities The book concludes that the degree of military involvement was indeed high The Soviet Space Program Eugen Reichl,2019-11-28 The N1 was the booster rocket for the Soviet manned moon program and was thus the direct counterpart of the Saturn V the rocket that took American astronauts to the moon in 1969 Standing 345 feet tall the N1 was the largest rocket ever built by the Soviets and was roughly the same height and weight as the Saturn Though initially ahead of the US in the space race the Soviets lagged behind as the pace for being first on the moon accelerated Massive technical and personnel difficulties plus spectacular failures repeatedly delayed the N1 program After the successful American landings on the moon it was finally canceled without the N1 ever achieving orbit The complete history of this rarely known Soviet program is presented here starting in 1959 along with detailed technical descriptions of the N1 s design and development A full discussion of its attempted launches disasters and ultimate cancellation in 1974 completes this definitive history Technical Translations ,1962 **Bulletin of the Atomic Scientists** ,1985-03 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world *The Routledge Handbook of Russian International Relations Studies* Maria Lagutina,Natalia Tsvetkova,Alexander Sergunin,2023-02-27 This handbook examines the study of international relations IR in Russia giving a comprehensive analysis of historical theoretic conceptual geographical and institutional aspects It identifies the place and role of Russia in global IR and discusses the factors that facilitate or impede the development of Russian IR studies The contributors represent diverse Russian regions and IR schools and offer an overview of different intellectual traditions and key IR paradigms in the post Soviet era Filling the vacuum in international understanding of the Russian perspective on pivotal international issues they demonstrate the continuity and change in Russia s international policy course over the past three decades and explain how different foreign policy schools and concepts have affected Russian foreign policy making and the decision making process Providing a unique contribution to the discussion on non Western IR theory this handbook will appeal to scholars and students of international relations Russian studies world politics and international studies
